                                                ***     MODEL SETUP OPTIONS
SUMMARY       ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for   341 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =    501900.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  2 Short Term Average(s) of:   1-HR  24-HR
     and Calculates ANNUAL Averages

 **This Run Includes:    341 Source(s);       1 Source Group(s); and
1716 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    341 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
```

```
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  14134

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor
(RECTABLE Keyword)
          Model Outputs External File(s) of High Values for Plotting
(PLOTFILE Keyword)
          Model Outputs Separate Summary File of High Ranked Values
(SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm
Hours
                                                                   m for
Missing Hours
                                                                   b for
Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     9.14 ;
Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC
;  Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.9 MB of RAM.

 **Input Runstream File:          aermod.inp
 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Arden Pond.err
 **File for Summary of Results:   Arden Pond.sum

                                                ***     MODEL SETUP OPTIONS
SUMMARY       ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for   506 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =    501900.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  2 Short Term Average(s) of:   1-HR  24-HR
     and Calculates ANNUAL Averages

 **This Run Includes:    506 Source(s);       1 Source Group(s); and
4576 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    506 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
```

```
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  14134

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor
(RECTABLE Keyword)
          Model Outputs External File(s) of High Values for Plotting
(PLOTFILE Keyword)
          Model Outputs Separate Summary File of High Ranked Values
(SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm
Hours
                                                                   m for
Missing Hours
                                                                   b for
Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     9.14 ;
Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC
;  Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      4.3 MB of RAM.

 **Input Runstream File:          aermod.inp
 **Output Print File:             aermod.out

 **Detailed Error/Message File:   2023 Golf Course.err
 **File for Summary of Results:   2023 Golf Course.sum

Appendix F

General Conformity Determination

Notice of Availability of Draft General Conformity Determination for American River Watershed Common Features, Water Resources Development Act of 2016 Project (ARCF 2016 Project)

The Clean Air Act (CAA) requires all federal actions to conform to applicable state plans to attain and maintain national air quality standards (i.e., SIP, or State Implementation Plan) (42 U.S.C. 7506(c), section 176(c)). The U.S. Army Corps of Engineers (USACE) prepared a Draft General Conformity Determination for American River Watershed Common Features, Water Resources Development Act of 2016 Project (ARCF 2016 Project), to demonstrate conformity with the California SIP, in accordance with the requirements established by the U.S. Environmental Protection Agency (40 CFR 93.150 *et seq*.)

Project Location: In and around the City of Sacramento, California along the banks of the Sacramento and American Rivers, local tributaries, the associated drainage and levee network, and at the Sacramento Weir and Bypass.

Project Description: Construction of approximately $1.5 billion in structural improvements to the Sacramento metropolitan area flood protection system of levees and bypasses, as recommended in the American River Common Features General Reevaluation Report (ARCF GRR, January 2016). The USACE, Central Valley Flood Protection Board (CVFPB), and Sacramento Area Flood Control Agency (SAFCA) joint Project aims to reduce flood damage and protect public safety within the Greater Sacramento area within the next four to five years. Congress appropriated full funding for the ARCF 2016 Project under the Bipartisan Budget Act (Public Law 115-123). Environmental effects of the levee improvements were analyzed in the Environmental Impact Statement/Environmental Impact Report (ARCF EIS/EIR, January 2016).

The Draft General Conformity Determination provides the opportunity for public and agency involvement and comment. During the 30-day public review period, the USACE encourages public questions and comments on the air quality General Conformity Determination for American River Watershed Common Features, Water Resources Development Act of 2016.

Comments on the Draft General Conformity Determination will be accepted from March 25, 2020 to April 25, 2020. Written comments may be submitted to: *General Conformity Determination ARCF 2016 – Planning Team*, U.S. Army Corps of Engineers, Sacramento District, 1325 J Street, Sacramento, California 95814 or email: spk-pao@usace.army.mil.

The Draft General Conformity Determination is available electronically at sacleveeupgrades.com and the USACE website: http://www.spk.usace.army.mil/Media/USACEProjectPublicNotices.aspx, or the Central Valley Flood Protection Board website: http://www.cvfpb.ca.gov. Copies of the Draft Determination available upon request. Contact our Public Affairs Office at (916) 557-5100, or spk-pao@usace.army.mil.

YSAQMD	Yolo-Solano Air Quality Management District
$\mu g/m^3$	Micrograms per cubic meter

General Conformity Determination
American River Watershed Common Features 2016 Project

The General Conformity regulations at Title 40 Code of Federal Regulations (CFR) Subchapter C Part 93 ensure that the actions taken by federal agencies do not interfere with a state's plans to attain and maintain national standards for air quality. This General Conformity Determination documents how the American River Common Features (ARCF) 2016 Project will meet the requirements of the General Conformity regulations.

Project Purpose and Description

The purpose of the ARCF 2016 Project is to reduce the risk of flooding within the Greater Sacramento metropolitan area.

The Sacramento metropolitan area is one of the urban regions most at risk of flooding in the United States. Constructed in the mid-twentieth century, the Sacramento River Flood Control Project was designed to protect the city from floodwaters as high as the known flood of record, which at the time of construction was the flood of 1927. A new record flood occurred in 1986, followed by a slightly smaller flood in January 1997, each of which caused levee failures and localized flooding. The primary risks to levee performance are seepage, underseepage, stability, erosion, and overtopping.

High water flows in both the American and Sacramento Rivers place considerable stresses on the network of levees protecting the Sacramento area. Without prompt improvement of weakened or sub-standard levee reaches, the levee system will remain at heightened risk of failure during periods of high water in the two rivers. The consequences of a major levee failure could be catastrophic because the protected area is highly urbanized and flooding could reach 20 feet deep, causing severe property damage, possible loss of life and serious contamination of drinking water supplies for downstream users.

The ARCF 2016 Project will construct approximately $1.5 billion in improvements to the Sacramento metropolitan area flood protection system, as recommended by the *American River Watershed Common Features General Reevaluation Report (GRR)*. Recommendations in the GRR include construction of levee improvement measures to address seepage, instability, erosion, and overtopping risks identified for the Sacramento River, Arcade Creek, Natomas East Main Drainage Canal (NEMDC), and Magpie Creek, as well as erosion control measures for specific locations along the American River, and widening of the Sacramento Weir and Bypass to provide capacity for diversion of a higher volume of flood flows into the Yolo Bypass.

In 2018, under the Bipartisan Budget Act (Public Law 115-123), Congress appropriated full funding for the ARCF 2016 Project under the Long-Term Disaster Recovery Investment Program (LTDRIP). U.S. Army Corps of Engineers (USACE) implementation guidance for the LTDRIP (Civil Works Director's Policy Memorandum # DPM CW 2018-09) requires that the project be implemented on a much accelerated schedule to meet the obligations of the federal funding under this program. To meet the accelerated schedule, this project must be completed by January of 2024. If not completed on this timeline, exposure to significant flood risk persist, including loss of life, loss of agricultural production, damage to homes and businesses, and damage to public facilities.

Regulatory Background

This document pertains only to the federal General Conformity regulations. Applicable state and municipal air quality regulations are discussed in the *American River Watershed Common Features General Reevaluation Report Final Environmental Impact Statement /Environmental Impact Report (December 2015)* and in subsequent project-level reviews.

National Ambient Air Quality Standards

The U.S. Environmental Protection Agency (EPA) develops and enforces federal regulations that govern air quality. The Federal Clean Air Act (CAA) requires EPA to set National Ambient Air Quality Standards (NAAQS) for pollutants considered harmful to public health and the environment. The EPA has identified six "criteria" air pollutants of nationwide concern: ozone, carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), lead, and particulate matter. Particulate matter is further subdivided into particulate with an aerodynamic diameter of 10 micrometers or less (PM_{10}) and particulates with an aerodynamic diameter of 2.5 micrometers or less ($PM_{2.5}$). Ozone is not directly emitted but is instead formed in heat and sunlight from the precursor pollutants of nitrogen oxides (NO_X) and volatile organic compounds (VOC). Although the definition varies slightly, Reactive Organic Gases (ROG) are frequently referred to interchangeably with VOC. SO_2, NO_X, and in some cases VOC and ammonia, are precursor pollutants for the formation of $PM_{2.5}$. Regulatory programs for the control of ozone focus on control of the precursor pollutants. Regulatory programs for the control of $PM_{2.5}$ focus on both direct emissions of $PM_{2.5}$ and precursor pollutants appropriate to the specific nonattainment area.

The CAA identifies two types of national ambient air quality standards. Primary standards provide public health protection, including protecting the health of "sensitive" populations such as asthmatics, children, and the elderly. Secondary standards provide public welfare protection, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings.

EPA designates areas of the State as attainment, nonattainment, maintenance, or unclassified for the various pollutant standards. An "attainment" designation for an area signifies that pollutant concentrations do not exceed the established standard. In contrast to attainment, a "nonattainment" designation indicates that a pollutant concentration has exceeded, and continues to exceed, the established standard. Nonattainment may vary in severity. To identify the severity of the issue and the extent of planning and actions required to meet the standard, nonattainment areas are assigned classifications that are commensurate with the severity of their pollution. Areas that previously exceeded a standard, but have come into compliance, are referred to as maintenance areas. Upon redesignation to maintenance status, an area is required to operate under a maintenance plan which establishes emission reduction measures that will ensure continued compliance with the NAAQS. The maintenance planning period extends for 20 years (two 10-year periods) after the redesignation date. Once the 20-year maintenance planning period is over, the CAA General Conformity Rule no longer applies and the area is considered to be in attainment.

Table 1 shows the NAAQS standards for each of the criteria pollutants. Several NAAQS have been revoked and replaced with more stringent standards over the years. Areas that were in nonattainment of the revoked standards are still subject to requirements to demonstrate compliance, however General Conformity does not apply to revoked NAAQS. Revoked NAAQS are not shown in Table 1.

Under the provisions of the CAA, the EPA requires each state with regions that have not attained the NAAQS to prepare a State Implementation Plan (SIP) detailing how these standards are to be met in each local area. The SIP is a legal agreement between each state and the federal government to commit resources to improving air quality. It serves as the template for conducting regional- and project- level air quality analysis. The SIP is not a single document but a compilation of new and previously submitted attainment plans, maintenance plans, emissions reduction programs, district rules, state regulations, and federal controls. Nonattainment and maintenance areas have a unique geography for each pollutant based on the physical region of the nonattainment area, and the meteorology, sources, and mechanisms that contribute to violations of the NAAQS.

Table 1. National Ambient Air Quality Standards

Pollutant	Averaging Time	Primary Standards	Secondary Standards	Form
Carbon Monoxide (CO)	8-hour 1-hour	9 ppm 35 ppm	—	Not to be exceeded more than once per year
Lead (Pb)	Rolling 3-month average	0.15 µg/m^3	Same as Primary	Not to be exceeded
Nitrogen Dioxide (NO_2)	Annual	53 ppb	Same as Primary	Annual mean
	1-hour	100 ppb	—	98th percentile of 1-hour daily maximum concentrations, averaged over 3 years
Particulate Matter (PM_{10})	24-hour	150 µg/m^3	Same as Primary	Not to be exceeded more than once per year on average over 3 years
Particulate Matter ($PM_{2.5}$)	Annual	12.0 µg/m^3	15.0 µg/m^3	Annual mean, averaged over 3 years
	24-hour	35 µg/m^3	Same as Primary	98th percentile, averaged over 3 years
Ozone (2015)	8-hour	70 ppb	Same as Primary	Annual fourth-highest daily maximum 8-hr concentration, averaged over 3 years
Ozone (2008)	8-hour	75 ppb	Same as Primary	Annual fourth-highest daily maximum 8-hr concentration, averaged over 3 years
Sulfur Dioxide (SO_2)	1-hour	75 ppb	—	99th percentile of 1-hour daily maximum concentrations, averaged over 3 years
	3-hour	—	0.5 ppm	Not to be exceeded more than once per year

Source: EPA 2019. ppm = parts per million; ppb = parts per billion; µg/m^3= micrograms per cubic meter; "—" = no applicable standard.

Attainment Status

Construction of the ARCF 2016 Project currently includes elements in Sacramento and Yolo Counties, and although construction is not currently planned in Solano, Sutter and Placer Counties, minor elements could affect these counties and they are included for completeness. Project emissions will also occur in the San Francisco Bay Area as materials are shipped, by barge, from expected locations adjacent to San Francisco and San Pablo Bays.

Table 2 lists the nonattainment and maintenance areas in the five counties, and their classification. The nonattainment and maintenance areas shown in Table 2 are located within two separate air basins: the Sacramento Valley and the San Francisco Bay Area.

Table 2. Attainment Status for the ARCF 2016 Project Area

Area Name Counties of Interest	**NAAQS** (Specific Standard)	**Status**	**Classification**
Sacramento Metro* Sacramento & Yolo (partial El Dorado, Placer, Solano, & Sutter)	**8-hr Ozone (2008)** 8-hr Ozone (2015)	***Nonattainment*** Nonattainment (recommended)	***Severe-15*** Moderate
Sacramento Sacramento; (partial El Dorado, Placer, Solano, & Yolo)	8-hr CO (2011) **$PM_{2.5}$ (2006)**	Maintenance** ***Nonattainment†***	Moderate Moderate
Sacramento County	PM_{10} (1987)	Maintenance	Moderate
San Francisco Bay Area (partial Solano)	8-Hour Ozone (2008) 8-Hour Ozone (2015) $PM_{2.5}$ (2006)	*Nonattainment* *Nonattainment* *Nonattainment*	Marginal Marginal Moderate
San Francisco-Oakland-San Jose (partial Solano)	8-hr CO (2011)	Maintenance	Moderate
Lake Tahoe North Shore (partial Placer)	8-hr CO (2011)	Maintenance	Not Classified
Sutter Buttes (partial Sutter)	8-hr Ozone (2015)	Nonattainment	Marginal
Yuba City-Marysville (partial Sutter)	$PM_{2.5}$ (2006)	Maintenance	Moderate

Source: EPA 2019, EPA Greenbook, https://www3.epa.gov/airquality/greenbook/anayo_ca.html
*Sacramento Federal Ozone Nonattainment Area (SFONA)
**Sacramento completed its 20 years of maintenance of the CO standard on June 1, 2018.
† USEPA determined Sacramento $PM_{2.5}$ area attained the 2006 24-hr. (2006) NAAQS in May 2017, based on certified 2013-2015 monitoring data. Redesignation Request to be updated and submitted to USEPA.

The boundaries of the nonattainment and maintenance areas designated for implementation of rules and regulations to improve air quality are described in the individual SIPs for the pollutants in question, or are published in the Federal Register at Title 40 CFR, Subchapter C Part 81. The nonattainment and maintenance areas expected to be affected by ARCF 2016 Project emissions are:

- The Sacramento Federal Ozone Nonattainment Area (SFONA) which includes all of Sacramento and Yolo counties and portions of Placer, El Dorado, Solano, and Sutter counties.
- The Sacramento Federal $PM_{2.5}$ Nonattainment Area which is slightly smaller than the ozone nonattainment area and includes all of Sacramento County and portions of Yolo, Solano, Placer and El Dorado counties.
- The Sacramento PM_{10} Maintenance Area which includes all of Sacramento County.
- The San Francisco Bay Area Intrastate Air Quality Control Area (San Francisco AQCA, the 8-hour Ozone and $PM_{2.5}$ nonattainment area) which includes all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, and Santa Clara counties and portions of Sonoma and Solano counties.

For the Sacramento Valley Air Basin, the ozone, PM_{10}, and $PM_{2.5}$ nonattainment and maintenance areas have different geographic footprints. For screening purposes, total project emissions for the entire SFONA, which has the largest geographic area, are analyzed and the smaller nonattainment or maintenance area emissions are only considered separately if needed.

General Conformity

The General Conformity process has four main components: an emissions analysis, an applicability determination, mitigation commitments, and an agency and public review. A discussion of each component of the process follows. The General Conformity Determination is the responsibility of the federal agency (USACE for the ARCF 2016 Project) and is subject to review by the air agencies for the local airsheds, the EPA, other agencies, and the public.

Emissions Analysis

An analysis of all direct and indirect emissions associated with the federal action must be completed and compared to *de minimis* thresholds to determine if General Conformity is applicable to the action. For the ARCF 2016 Project, emissions were estimated using the Sacramento Metropolitan Air Quality Management District's (SMAQMD's) *Road Construction Emissions Model* (RCEM), Version 8.1.0. The RCEM was developed by SMAQMD to analyze emissions from linear projects such as roadways, and for the ARCF 2016 Project. Emissions from barges were estimated using the SMAQMD *Harborcraft, Dredge and Barge Emissions Factor Calculator.* The emissions analysis is documented in a memorandum titled *American River Common Features 2016 Air Pollutant Emissions Methods and Results to Support a General Conformity Determination*, which is included in Appendix B to this document. Emission sources analyzed included a wide range of construction equipment and activities, on-road mobile sources (construction material delivery trucks and motor vehicles driven by contractor employees), as well as barge emissions resulting from the delivery of quarry rock and aggregate. The analysis memorandum evaluated two cases to address possible schedule slippage for project elements.

After the memorandum was prepared, USACE updated its anticipated project schedule. Although the component projects, the underlying modeling assumptions, and results did not change, the expected year of construction changed for many of the component projects. Erosion projects which were originally planned to be constructed in multiple years were consolidated into single construction seasons. As a result, the way that the component projects and model results were distributed among calendar years changed. Appendix C to this document contains several tables from the memorandum, updated to reflect USACE's best available schedule assumptions as of March 2020. Emission tables included in this General Conformity Determination document are consistent with these best available schedule assumptions.

The ARCF 2016 Project will be completed through numerous separate contracts over a minimum five-year period. Many elements of the Project are still in the design phase. Consequently, actual emissions will vary from the estimates set forth in this document. Conservative assumptions regarding construction methods and timing were used in the emissions analysis to determine the overall levels of control and mitigation that will be required. Table 3 shows the estimated total uncontrolled (no equipment controls applied; standard vehicle fleet assumptions) project emissions by year in the SFONA and the San Francisco AQCA. See Appendix C for project components and emission summation by year. Only nonattainment and maintenance pollutants are included in Table 3. Uncontrolled SO_2 emissions are estimated to be negligible in both the SFONA and the San Francisco AQCA and therefore are not shown in Table 3.

Table 3. Estimated Uncontrolled Emissions by Year and Control Area

Control Area	**Pollutant Emissions** (tons per year)			
SFONA	**ROG**	**NO_X**	**PM_{10}**	**$PM_{2.5}$**
2019	0.0	0.5	3.3	0.7
2020	3.4	**38.2**	8.3	2.9
2021	4.8	**52.6**	47.1	11.3
2022	7.8	**94.6**	97.2	22.8
2023	5.5	**65.1**	53.4	13.0
San Francisco AQCA	**ROG**	**NO_X**	**PM_{10}**	**$PM_{2.5}$**
2020	0.1	1.3	0.1	0.1
2021	0.5	8.0	0.4	0.3
2022	0.8	13.2	0.6	0.5
2023	1.0	16.8	0.8	0.7

Applicability

The General Conformity Rules established *de minimis* thresholds to screen projects for the potential to impose significant adverse air quality effects. Projects with annual total emissions from direct and indirect emissions less than the *de minimis* thresholds are not considered to be significant and do not require a General Conformity Determination. The *de minimis* thresholds vary based upon the severity of ambient pollution in an area. Table 4 summarizes the *de minimis* thresholds applicable for the ARCF 2016 Project area. Project emissions above these thresholds require a General Conformity Determination to demonstrate how emissions will be controlled and mitigated.

Table 4. General Conformity *De Minimis* Thresholds for the ARCF 2016 Project Area

Control Area	Pollutant (NAAQS Standard)	Classification	*De Minimis* Threshold (tons per year)
SFONA	**Ozone (2008)**	**Severe – 15**	**25** (VOC and NO_X)
	PM_{10} (1987)	Maintenance	100
	$PM_{2.5}$ (2006)	Moderate	100 ($PM_{2.5}$, SO_2, and NO_X)
San Francisco AQCA	Ozone (2008)	Marginal	100
	$PM_{2.5}$ (2006)	Moderate	100 ($PM_{2.5}$, SO_2, and NO_X)

Note: VOC and ammonia are not considered precursor pollutants of concern for $PM_{2.5}$ formation in the Sacramento and San Francisco control areas.

Project emissions of criteria pollutants occurring within a nonattainment or maintenance area are compared to the applicable thresholds for that pollutant, as displayed in Table 4 above. A comparison of the estimated uncontrolled ARCF 2016 Project emissions in Table 3 to the General Conformity thresholds in Table 4 shows that uncontrolled project pollutant emissions estimated within the San Francisco AQCA are a minor fraction of the *de minimis* threshold for any pollutant. Within the SFONA, the estimated uncontrolled project emissions of all pollutants except NO_X as an ozone precursor pollutant, are well below the *de minimis* thresholds. Estimated project NO_X emissions are below *de minimis* levels as a $PM_{2.5}$ precursor pollutant.

Uncontrolled project NO_X emissions as a contributor to ozone formation within the SFONA are estimated to be higher than the *de minimis* threshold and therefore a General Conformity Determination is required for NO_X emissions within the SFONA.

Mitigation Commitments

Although General Conformity applies only to emissions over the thresholds, state and municipal air regulations require control of project pollutant emissions, and related reduction and mitigation commitments, as prescribed through the California Environmental Quality Act process. These commitments are discussed in the *American River Watershed Common Features General Reevaluation Report Final Environmental Impact Statement /Environmental Impact Report (December 2015)* and in supplemental documents addressing individual project elements.

Table 5. Estimated Controlled Emissions in the SFONA by Year and Air District

Year	**NO_x Emissions** (tons per year)		
	SFONA	***SMAQMD***	***YSAQMD***
2019	0.5	0.5	--
2020	5.1	5.1	--
2021	15.9	9.9	6.0
2022	**35.3**	30.8	4.5
2023	**30.3**	24.0	6.3

NOTE: Emissions calculations assume on-road equipment fleet achieves overall emissions of 2010 or newer model vehicles and 90% of the on-site equipment meets Tier 4 standards.

Construction of the ARCF 2016 Project will require the use of many pieces of heavy construction equipment. The volume of required equipment can affect the ability of construction and equipment rental companies to provide a low-emitting vehicle fleet. USACE performed outreach to the construction industry to get feedback on the level of emissions control available on the overall construction fleet potentially available to complete the ARCF 2016 Project. Feedback from the construction industry supported USACE's proposal that it is feasible to achieve an equipment fleet for construction of ARCF 2016 with 90 percent of off-road equipment having engines meeting EPA Tier 4 standards. Additionally, USACE has determined that further emission reductions can be achieved by requiring the use of equipment that meets a minimum Tier 1 standard (i.e., no Tier 0 or uncontrolled equipment would be allowed on site, without approval by the Corps. In order to gain approval, contractors must provide updated emissions estimates showing how the Tier 1 standard could be achieved through offsets or additional mitigation implementation).

USACE will first reduce NO_X emissions through specification of an emissions-controlled vehicle fleet, and secondly through obtaining NO_X offsets for any year in which the emissions with implementation of equipment controls exceed the *de minimis* threshold of 25 tons of NO_X emitted within the SFONA boundary. Table 5 shows the estimated NO_X emissions in the SFONA for the ARCF 2016 Project with equipment controls applied, assuming on-road truck emissions will be equivalent to emissions from model year 2010 or newer for the entire on-road truck fleet, and off-road equipment will achieve a fleetwide NO_X reduction equivalent to 90 percent of the emissions reduction if all equipment were equipped with Tier 4 engines.

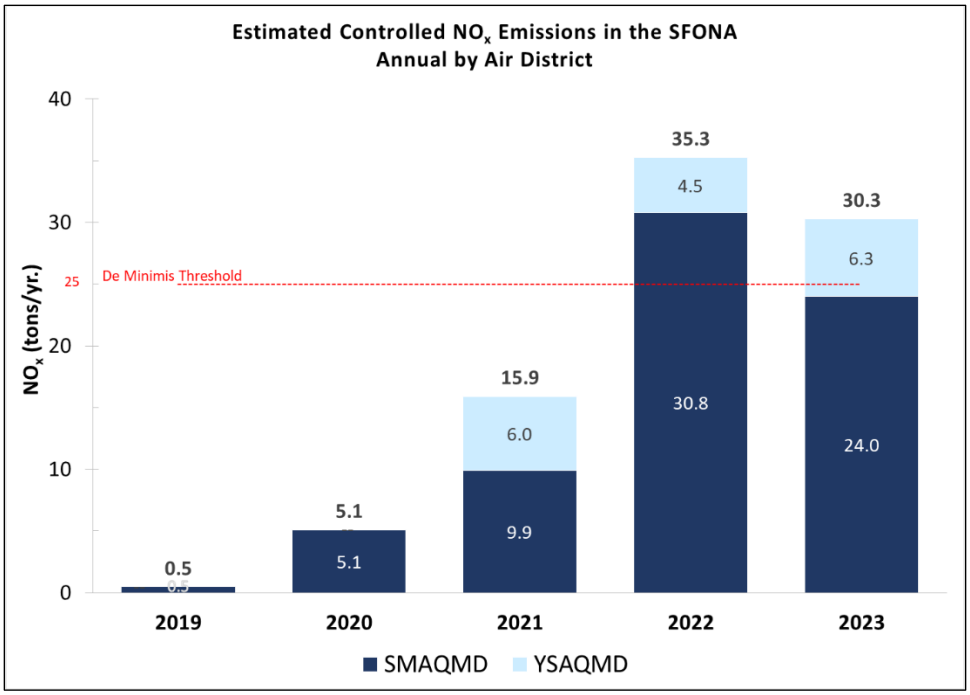

Figure 1. Estimated NO_x emissions in the SFONA Sacramento Metro and Yolo-Solano Air Quality Management Districts.

All direct and indirect emissions occurring within the SFONA must be considered in determining General Conformity applicability. The SFONA overlaps portions of multiple local air quality management districts. Figure 1 and Table 5 show the relative portions of estimated annual SFONA emissions generated in the Sacramento Metro AQMD and Yolo-Solano AQMD by ARCF 2016 Project construction. The Project emissions will primarily be generated from within the SMAQMD. The Sacramento Weir widening and associated levee improvement contracts occur within the Yolo-Solano Air Quality Management District (YSAQMD). No ARCF 2016 Project construction is planned in the higher elevation local air quality jurisdictions. That upper northeastern reach of the SFONA extends into parts of the Placer County Air Pollution Control District, Feather River AQMD, and El Dorado County AQMD.

To mitigate NO_X emissions within the SFONA, USACE will obtain NO_X emissions offsets from the local air quality agencies to fully offset total NO_X emissions – with construction fleet emissions controls applied – in 2022 and 2023. Emission offsets will not be required if emissions can be maintained below 25 tons per year of NO_X in the SFONA through equipment control measures.

Agency Reporting and Public Review

USACE must provide a 30-day notice which describes the proposed action and the Federal agency's Draft General Conformity Determination on the action. USACE must notify the same agencies, planning and land mangers that were notified of the Draft General Conformity Determination within 30 days after making a Final General Conformity Determination. Notice must be given to:

- The EPA Region 9 Office
- State and local air quality agencies
- Any federally-recognized Indian tribal government in the SFONA
- Where applicable, affected Federal land managers
- The agency designated under section 174 of the Act (the California Air Resources Board)
- The Metropolitan Planning Organization

USACE must make public its Draft General Conformity Determination by placing a notice by prominent advertisement in a daily newspaper of general circulation in the area affected by the ARCF 2016 Project and by providing 30 days for written public comment prior to taking any formal action on the draft determination. Following the public comment period on the Draft General Conformity Determination, the USACE must document responses to all comments received. The Final General Conformity Determination must be made public by placing a notice by prominent advertisement in a daily newspaper of general circulation in the area affected by the action within 30 days of the Final General Conformity Determination. Upon request by any person, comments and responses must be made available within 30 days of the Final General Conformity Determination. Both Draft and Final General Conformity Determinations for American River Watershed Common Features 2016 Project will be available on the USACE website for Sacramento Area Levees: sacleveeupgrades.com.

General Conformity Determination

The ARCF 2016 Project will be in conformity with the Clean Air Act and will not cause or contribute to a new violation, nor increase the frequency or severity of existing violations of the NAAQS. The following mitigation measures will be implemented to maintain conformity:

Measure 1: Actual emissions of nonattainment and maintenance pollutants occurring within the SFONA will be tracked monthly using tools acceptable to the SMAQMD and YSAQMD. The tracking data will be used to verify that all pollutants remain below the General Conformity *de minimis* thresholds or are fully mitigated and offset. If actual tracked emissions exceed 25 tons per year NOx, yet the emissions were prospectively estimated at below the *de minimis* threshold, then USACE would obtain offsets and fully mitigate emissions accordingly.

Measure 2: In any calendar year where equipment control measures are projected to be insufficient to maintain project NO_X emissions within the SFONA below the general conformity *de minimis* threshold of 25 tons per year, offsets will be obtained (through purchase or loan) to fully offset the project's total direct and indirect NO_X emissions for that year.

Measure 3 (equipment control measure): USACE will require the use of on-road trucks with 2010 or newer model year engines, or an equivalent emission reduction, in all construction contracts. Construction contracts will allow the use of older model trucks in limited circumstances with a contractor proposed program to reduce vehicle miles travelled and with pre-approved total project emissions estimates for the year.

Measure 4 (equipment control measure): USACE will require the use of Tier 4 emission control technology equivalent to a minimum 90 percent reduction, based on off-road equipment horsepower, relative to the reduction achievable if all equipment used Tier 4 control technology for NO_X emissions from off-road construction equipment. For the remaining 10%, all equipment must meet a minimum Tier 1 standard. No Tier 0 or uncontrolled equipment will be allowed on site, without approval by USACE. In order to gain approval, contractors must provide updated emissions estimates showing how the Tier 1 standard could be achieved through offsets or additional mitigation implementation.

Measure 5: Mitigation offsets will be obtained from SMAQMD to offset NO_X emissions occurring within Sacramento County through the use of Rule 205 Community Bank and Priority Reserve Bank. Mitigation NO_X offsets will be obtained through the normal process described in SMAQMD Rule 205. Specific sections of Rule 205 applicable to meeting the timing requirements of General Conformity Offsets are:

- Section 310 – Community Bank Account Approval Process,
- Section 314 – Reserving Essential Public Services Account Credits,
- Section 405 – Loan Initiation Date, and 500 – Monitoring and Records.

SMAQMD Emission Reduction Credit loan applications must be submitted to the SMAQMD by April 1 of the year prior to emissions being offset, in order to process the transaction and pay all fees prior to January 1 of the following year.

Measure 6: A mitigation offset agreement will be maintained with YSAQMD to offset NO_X emissions occurring within the YSAQMD and the SFONA boundaries. Mitigation NO_X offsets will be purchased as described in the agreement. The NO_X offset agreement for YSAQMD will be similar to the DRAFT *YSAQMD - ARCF 2016 NO_X Offset Agreement* included as Appendix A.

Measure 7: If enough NO_X mitigation offsets are not available from the SMAQMD Community Bank and Priority Reserve, additional offsets will be purchased from the YSAQMD under an agreement (similar to the DRAFT NO_X Offset Agreement in Appendix A) to meet the full offset requirement within the SFONA.

APPENDIX A

DRAFT

YSAQMD – ARCF 2016 NO_X Offset Agreement

NOx Offset Agreement Between Yolo-Solano Air Quality Maintenance District (YSAQMD) and the U.S. Army Corps of Engineers (USACE), Sacramento District

Background

The U.S. Army Corp of Engineers (USACE) is planning to construct a program of improvements to levees in the Sacramento area under the American River Watershed Common Features (ARCF) 2016 Project. The construction program is expected to generate emissions that will exceed the Federal General Conformity thresholds for nitrogen oxides (NO_X) within the Sacramento Federal Ozone Nonattainment Area (SFONA). USACE will mitigate NOx emissions using several measures, including obtaining offsets for NOx emissions within the SFONA. This agreement is a voluntary compliance agreement, as allowed under 40 CFR §93.160 ('Mitigation of Air Quality Impacts'). The General Conformity regulations requires voluntary compliance agreements to contain a description of the proposed mitigation measures, and implementation schedules tied to explicit timelines (see 40 CFR §93.160(a)).

Mitigation Agreement

USACE and YSAQMD agree to the following conditions for obtaining qualifying offsets under General Conformity for NO_X emissions in the SFONA:

1) NO_X emissions generated by the ARCF 2016 Project within the YSAQMD jurisdiction will be offset within the District and the SFONA boundaries. NO_X emissions generated outside of the YSAQMD jurisdictional boundary may also be offset within the YSAQMD boundary with agreement from another local air quality agency with jurisdiction over the emissions and within the SFONA. In accordance with 40 CFR §93.158, the ARCF 2016 Project mitigation measures will "effect emissions reduction equal to or greater than the total of direct and indirect emissions... so that there is no net increase in emissions of that pollutant."
2) YSAQMD manages equipment retirement and replacement programs to achieve NO_X emission reductions within the District. YSAQMD has verified with the U.S. Environmental Protection Agency that equipment replacement programs may accept NO_X mitigation payments from the USACE for mitigation of emissions from construction of the ARCF 2016 project, in conformance with 40 CFR §93.160 and §93.163(a).
    a. Upon receipt by YSAQMD of mitigation payments from USACE, YSAQMD will appropriately offset ARCF 2016 Project emissions with emissions credits generated by equipment under one of YSAQMD's equipment retirement and replacement programs. YSAQMD will take full responsibility for generating offsets that meet the following language of §93.163(a): "the emissions reductions from an offset or mitigation measure used to demonstrate conformity must occur during the same calendar year as the emission increases from the action." USACE shall not be liable for any offset penalty or cost arising from improper use by YSAQMD of mitigation funds received from USACE.
3) USACE agrees to pay a mitigation fee of $18,262 per ton of NO_X offset credits to YSAQMD, plus a ten percent (10%) administration fee on the total mitigation offset charge for NO_X emissions within YSAQMD.
4) Before January 15, 2020 USACE will provide YSAQMD an initial estimate of required offset credits for calendar years 2020, 2021, 2022, and future years if needed, for mitigation of up to 12 tons per year of NO_X (but not to exceed a total of 35 tons NO_X for the entire construction period).

5) USACE will pay YSAQMD in full for offset credits to mitigate for the ARCF 2016 project's NO_X emission offset estimated for calendar years 2022 and 2023 within YSAQMD jurisdiction by February 1, 2022.
6) YSAQMD will procure the offset credits purchased as exclusive to USACE for the applicable calendar years of 2021 through and including 2025. Emission credits will not return to a community bank or be available for use by other projects or persons during the construction period of the ARCF 2016 Project.
7) Any surplus of NO_X emission offset credits (purchased credits in excess of actual emissions) will be held for use in future years for offsetting the emissions from future USACE ARCF 2016 Project contracts.
8) During the period of project construction USACE will provide a calculation of actual emissions within the YSAQMD for each calendar year by February 15 of the following year. USACE will use emission calculation tools required by the Sacramento Metropolitan Air Quality Management District (SMAQMD) for the calculations.
9) USACE will provide a revised estimate of required offsets by 1/15/2023 for calendar year 2023 and future construction years.
10) USACE will pay in full for estimated offsets for calendar year 2023 and future years by 2/1/2023. Future offset payment amounts will be reduced by any surplus purchased offset credits in excess of actual emissions for previous years.

Attenuation Calculations for Stationary Noise Sources

KEY: Orange cells are for input.
Grey cells are intermediate calculations performed by the model.
Green cells are data to present in a written analysis (output).

STEP 1: Identify the noise source and enter the reference noise level (dBA and distance).

STEP 2: Select the ground type (hard or soft), and enter the source and receiver heights.

STEP 3: Select the distance to the receiver.

Noise Source/ID	Reference Noise Level			Attenuation Characteristics				Attenuated Noise Level at Receptor		
	noise level (dBA)	@	distance (ft)	Ground Type (soft/hard)	Source Height (ft)	Receiver Height (ft)	Ground Factor	noise level (dBA)	@	distance (ft)
Rip Rap	88.0	@	50	soft	5	5	0.58	88.0	@	50
Rip Rap	88.0	@	50	soft	5	5	0.58	80.2	@	100
Rip Rap	88.0	@	50	soft	5	5	0.58	72.5	@	200
Rip Rap	88.0	@	50	soft	5	5	0.58	67.9	@	300
Rip Rap	88.0	@	50	soft	5	5	0.58	64.7	@	400
Rip Rap	88.0	@	50	soft	5	5	0.58	62.2	@	500
Rip Rap	88.0	@	50	soft	5	5	0.58	54.4	@	1000
Rip Rap	88.0	@	50	soft	5	5	0.58	49.9	@	1500
Rip Rap	88.0	@	50	soft	5	5	0.58	46.6	@	2000
Rip Rap	88.0	@	50	soft	5	5	0.58	42.1	@	3000
							0.66			
							0.66			
							0.66			
							0.66			

Notes:

Estimates of attenuated noise levels do not account for reductions from intervening barriers, including walls, trees, vegetation, or structures of any type.

Computation of the attenuated noise level is based on the equation presented on pg. 12-3 and 12-4 of FTA 2006.

Computation of the ground factor is based on the equation presentd in Figure 6-23 on pg. 6-23 of FTA 2006, where the distance of the reference noise leve can be adjusted and the usage factor is not applied (i.e., the usage factor is equal to 1).

Distance Propagation Calculations for Stationary Sources of Ground Vibration

KEY: Orange cells are for input.
Grey cells are intermediate calculations performed by the model.
Green cells are data to present in a written analysis (output).

STEP 1: Determine units in which to perform calculation.

- If vibration decibels (VdB), then use Table A and proceed to Steps 2A and 3A.
- If peak particle velocity (PPV), then use Table B and proceed to Steps 2B and 3B.

STEP 2A: Identify the vibration source and enter the reference vibration level (VdB) and distance.

STEP 3A: Select the distance to the receiver.

Table A. Propagation of vibration decibels (VdB) with distance

Noise Source/ID	Reference Noise Level			Attenuated Noise Level at Receptor		
	vibration level (VdB)	@	distance (ft)	vibration level (VdB)	@	distance (ft)
Haul truck	86	@	25	77.0	@	50
Vibratory Compactor	94	@	25	79.7	@	75

STEP 2B: Identify the vibration source and enter the reference peak particle velocity (PPV) and distance.

STEP 3B: Select the distance to the receiver.

Table B. Propagation of peak particle velocity (PPV) with distance

Noise Source/ID	Reference Noise Level			Attenuated Noise Level at Receptor		
	vibration level (PPV)	@	distance (ft)	vibration level (PPV)	@	distance (ft)
Haul truck	0.076	@	25	0.027	@	50
Vibratory Compactor	0.210	@	25	0.198	@	26

Notes:

Computation of propagated vibration levels is based on the equations presented on pg. 12-11 of FTA 2006. Estimates of attenuated vibration levels do not account for reductions from intervening underground barriers or other underground structures of any type, or changes in soil type.

Clean Water Act
Section 404(b)(1) Evaluation

H1 Erosion Protection Sites 2-2 and 2-3 Clean Water Act Section 404(b)(1) Evaluation

APPENDIX H-1

Erosion Protection Sites 2-2 and 2-3 Clean Water Act Section 404(b)(1) Evaluation

1.0 Introduction

The Sacramento Metropolitan area is one of the most at risk areas for flooding in the United States. There is a high probability that flows in either the American or Sacramento Rivers will stress the network of levees protecting the Sacramento area to the point that levees could fail. The consequences of such a levee failure would be catastrophic since the inundated area is highly urbanized.

The purpose of the American River Watershed Common Features project (ARCF) is to improve the existing infrastructure to reduce flood risk along the American and Sacramento Rivers. This project covers approximately 22 miles of American River levees, 12 miles of Sacramento River levees, and 5.5 miles of the Natomas Cross Canal levee in Natomas.

The ARCF General Reevaluation Report (GRR) Final Environmental Impact Statement/ Environmental Impact Report (EIS/EIR) (U.S. Army Corps of Engineers [USACE] 2016)[1] previously analyzed several alternatives, including a No Action/No Project Alternative and two action alternatives. The Proposed Action, a component of the preferred alternative, includes the installation of erosion protection features along about 1.5 miles of the American River and the development of mitigation at three sites. For a summary description of the Proposed Action see "Proposed Action" below and for a full description see Section 2.3, "Proposed Action," of *American River Watershed Common Features 2016 American River Contract 2—Supplemental EIS/EIR* (USACE 2021).

The Proposed Action would be located in the City of Sacramento and in Sacramento County, California along the American River at Site 2-2 (RM 7.45–7.65) and Site 2-3 (RM 5.9–7.2).

The basic purpose of the Proposed Action is to reduce flood risk to Sacramento. The overall purpose of the proposed action is to improve the existing infrastructure at Sites 2-2 and 2-3 along the Lower American River to reduce flood risk resulting from erosion.

The basis of this consistency analysis is an evaluation of the consistency of the Proposed Action (as described below and in the American River Contract 2 Supplemental EIS/EIR (USACE,

[1] U.S. Army Corps of Engineers and Central Valley Flood Protection Board. 2016. *American River Watershed General Reevaluation Report, Final Environmental Impact Statement / Environmental Impact Report.* December. Sacramento, California. State Clearing House Number 2005072046.

CVFPB, and SAFCA 2021) with the determinations of the 2015 404(b)(1) evaluation and to demonstrate how the Proposed Action is consistent with its findings and is the Least Environmentally Damaging Practicable Alternative (LEDPA). The source materials are:

- USACE (2015) *Draft Section 404(b)(1) Water Quality Evaluation American River Common Features General Reevaluation Report*. Appendix E in USACE (2016). This Clean Water Act Section 404(b)(1) evaluation first describes the alternatives considered, including the No Action and the Proposed Action. Along the American River, the alternatives include erosion protection, through launchable rock or bank protection, and mitigation including restoration of riparian vegetation and shaded riverine aquatic (SRA) habitat, and the planting and transplanting of elderberry shrubs. The 404(b)(1) evaluation also provides information on why certain alternatives were not selected, based on impacts to Waters of the U.S., practicability, and other considerations. For the alternatives considered, the 404(b)(1) evaluation provides factual determinations and findings per the *404(b)(1) Guidelines for Specification of Disposal Sites for Dredged or Fill Material* (40 CFR Section 230.1–230.98).
- USACE (2016) *American River Watershed General Reevaluation Report, Final Environmental Impact Statement / Environmental Impact Report*. May. Sacramento, California. State Clearing House Number 2005072046.
- USACE (2021) *American River Watershed Common Features 2016 American River Contract 2—Supplemental EIS/EIR* (USACE 2021). State Clearing House Number 2005072046.

2.0 Alternatives

Below are descriptions of the No Action and Proposed Action. The overall purpose of the proposed action is to improve the existing infrastructure at Sites 2-2 and 2-3 on the right bank of the Lower American River (with a combined length of approximately 7,800 feet) to reduce flood risk resulting from erosion, and develop mitigation along the Lower American River for those improvements (Figure 1). The Proposed Action is specific to the Lower American River; therefore, offsite alternatives were not considered.

2.1 No-Action Alternative

Under the No-Action Alternative, the Proposed Action would not be constructed. As a result, this segment of the levee would remain susceptible to failure because of erosion and would continue to be a weak spot in the system. The levees within the Project Area could fail and result in flooding of the Campus Commons area, leading to catastrophic loss of life and property. This area of Sacramento includes numerous residences and businesses. Government facilities also would be impacted until flood waters recede. Damage to infrastructure, utility systems, and commercial and residential interests would be substantial. Workers would be unable to perform their duties until the buildings are restored and could be occupied. This could cause a temporary shutdown or slowdown of many government functions. Also, there are transportation corridors within the Project Area that could be flooded if levees were to fail.

The Sacramento metropolitan area would continue to be subject to an unacceptably high risk of levee failure and subsequent catastrophic flooding. A flood in the Sacramento metropolitan area

would have substantial repercussions that would affect the entire State; the national economy; and Federal, State, and local government operations and infrastructure.

2.2 Proposed Action

2.2.1 Erosion Protection Site Descriptions

Site 2-2

Site 2-2 extends along the right bank from approximately LAR RM 7.45 upstream to RM 7.65 (see Figure 2-3 in USACE 2021). The primary erosion risk along Site 2-2 is an erodible bank susceptible to toe scour. The design of erosion protection at Site 2-2 would include launchable rock toe protection, a series of rock tie-backs connecting the rock toe with the existing bankline, planting benches located between the rock toe and the bankline, and soil-filled rock slope protection upstream and downstream of the planting benches. These features are illustrated in Figures 2-5 through 2-10 in *American River Watershed Common Features 2016 American River Contract 2—Supplemental EIS/EIR* (USACE 2021).

Approximately 34,000 cubic yards would be placed in waters of the U.S at Site 2-2.

Launchable Rock Toe

The launchable rock toe would run continuously along the waterside edge of Site 2-2. The top elevation of the launchable rock toe protection would be approximately 2 feet below summer water levels and would obscure the angular riprap from public view. Bedding material (cobbles and gravels) would be placed along the top elevation of the rock to reduce fisheries and recreation impacts. The launchable rock toe protection would be approximately 20 feet wide with 2H:1V side slopes, requiring excavation of approximately 2 to 3 feet to maintain a maximum rock launch height of less than 15 feet. Instream woody material (IWM) would be installed along the top of the launchable rock toe.

Planting Benches with Rock Tie-back Bank Protection

A series of planting benches separated by rock tie-backs would be graded in the middle third of Site 2-2. The rock tie-backs would extend from the launchable rock toe protection to the top of the existing bank revetment. They would be 4 feet wide and composed of a mixture of 70 percent riprap and 30 percent soil mixture to promote vegetation establishment.

Trees and shrubs on the planting benches would provide on-site mitigation for riparian and SRA habitat. IWM, comprising small dead trees with intact root wads, would be placed on lower elevation, more frequently inundated, bench areas.

Soil-Filled Rock Bank Protection

Approximately two-thirds of the length of bank protection along Site 2-2 would be soil-filled rock slope protection. It would have three layers: a 12-inch thick layer of bedding, a minimum 24-inch thick layer of a mix of 70 percent riprap and 30 percent soil placed over the bedding material, and 12-inch thick layer of topsoil. Soil for the rock soil mix would be sourced from stockpiled Site 2-3 material, to the extent practicable. Imported soil would be incorporated, as needed. The soil-filled rock slope protection would be seeded with native upland species and planted with shrubs.

Site 2-3

Site 2-3 extends from RM 5.9 upstream to RM 7.2 and the H Street Bridge crosses the American River at Site 2-3 (see Figure 2-3, "Project Sites," in USACE 2021). The primary erosion risk along Site 2-3 is a steep bank susceptible to failure and poor erosion resistance because of a lack of vegetation. The design of Site 2-3 would include prominent planting benches cut into the bank transverse buried rock structures, and to protect the H Street Bridge, a launchable rock trench and rock slope protection. These features are illustrated in Figures 2-11 through 2-19 in *American River Watershed Common Features 2016 American River Contract 2—Supplemental EIS/EIR* (USACE 2021).

At Site 2-3 there would be a net removal of material from the site, including from waters of the U.S: approximately 363,000 cubic yards of earthen material would be removed from the site and 88,000 cubic yards of fill consisting of rock, aggregate, topsoil, bedding material, cobble, and boulder would be installed at the site.

Planting Bench/Cut Bank Design

Site 2-3 would be graded to: (1) flatten slopes, (2) create benches at suitable elevations for riparian vegetation, and (3) increase flow conveyance. Approximately 363,300 cubic yards (cy) of soil would be excavated and removed off site to soil stockpile locations used by the local maintaining agency (see below).

Site 2-3 would include three planting benches at lower, middle, and upper elevations and three 2H:1V sloped sections that connect them. The elevation of the lower bench toe would match the water surface elevation of the mean summer/fall flow. The top of the middle bench would be approximately at the Ordinary High Water Mark (OHWM). The slope between the lower and middle benches would be 4H:1V and 2 feet high. The slope connecting the middle and upper benches would be 2H:1V and 5 feet high. The upper slope connecting the upper bench with existing grade would also be 2H:1V and 0–6.5 feet high.

Riparian vegetation would be established on all three planting benches, but they would differ in their inundation and thus the habitats they provide. During July–November, the lower bench's toe would be inundated about 50 percent of the time and its upper end would be inundated only 5 percent or less of the time. IWM would be installed on the lower bench. Typically, the middle bench would only be inundated during winter and early spring. The upper bench would be above the OHWM elevation.

Transverse Rock Structures

Transverse rock structures limit the maximum extent of erosion that could occur if vegetation on planting benches is unable to resist erosion forces.

The transverse rock structures consist of: (1) a buried rock tie-back from the top of the cut bank to the lower bench, and (2) a spur of launchable rock. The top of these structures would be below grade and covered with 2 feet of compacted topsoil that would be seeded grass and shrub species. The buried rock tie-backs would be hexagonal in cross-section, 8 feet deep, and 22 feet wide along the bank slope and 50 feet wide at their downslope end.

The tie-backs would be a mixture of 60 percent 24-inch rock and 40 percent soil. On the lower bench, each tie-back would connect to a launchable spur. These spurs would be spaced 100–150 feet apart, and would be 50 feet wide, 8 feet deep, and 32–42-feet long. The spur of launchable rock would be box-like in shape and consist of 30-inch rock with voids between rocks filled with a mix of 70 percent 1.5-inch aggregate and 30 percent soil.

H Street Bridge Protection

A launchable rock trench and rock slope protection would be installed at the H Street Bridge. The launchable rock trench would be buried along approximately 170 feet of bankline and would be filled with 30-inch rock. Rock slope protection would include rock and soil-filled rock. Rock up to 24 inches in diameter placed adjacent to the existing rock protection to fill in unprotected areas under the bridge. Soil-filled rock would be a 70 percent/30 percent rock/soil mixture placed on the upper banks of the channel under the bridge around the pier and the piles on the floodplain, and on the levee faces upstream and downstream of the bridge.

2.3 Other Alternatives Not Considered

Other alternatives that were not considered include smaller bank protection footprints, or reliance solely on bioengineered techniques for protecting banks, to minimize impacts to existing habitats. As stated above, this activity is site specific because the erosion control is targeted for this specific erosion site and the other alternatives did not meet the needs for this site.

Reducing the footprint is not possible because the extent of this individual erosion site and the need to withstand 200-year flood events and tie in with adjacent levee protection work. The height of the levee improvements was determined adequate to withstand modeled shear stresses of the design flow magnitude.

Bioengineered techniques are incorporated into the Proposed Action. However, if not used in conjunction with launchable rock and rock revetment, bioengineered techniques do not provide sufficient erosion protection because of the high velocities in the river at flood stage. The bank protection is engineered for a 200-year flood event and bioengineered materials would not provide adequate bank protection during a 200-year event at Sites 2-2 and 2-3.

3.0 Comparisons

This section contains an evaluation of the potential short-term or long-term effects of the Proposed Action and a conclusion regarding the consistency of these effects of the Proposed Action with the 2015 404(b)(1) evaluation. Actions to minimize effects and secondary effects are included in the discussions.

3.1 Physical and Chemical Characteristics of the Aquatic Ecosystem

3.1.1 Substrate

Existing Substrate and Fill

The Proposed Action would create permanent changes of substrate at Site 2-2 and Site 2-3:

- At Site 2-2, riverbanks would be changed from alluvial soils to stone riprap where the launchable rock toe, rock tie-backs, and soil-filled rock slope protection are installed. The launchable rock toe would consist of 24–36-inch rock covered by gravels and cobbles. The rock tie-backs would consist of a mix of 70 percent 24-inch rock and 30 percent soil. Fill material for the soil-filled rock slope protection would consist of a mix of 70 percent rock (up to 24 inches in diameter) and 30 percent soil that would be covered by 12-inches of topsoil.
- At Site 2-3, riverbanks would be changed from alluvial soils to stone riprap where the soil-filled rock slope protection, transverse rock structures, and launchable rock trench are installed. The soil-filled rock slope protection would be placed on the surface and would be a mix of 70 percent rock (up to 24 inches in diameter) and 30 percent soil. Rock up to 24 inches in diameter would also be used to cover unprotected areas adjacent to existing rock protection. The launchable rock trench would be filled with 30-inch rock. The transverse rock structures would consist of (1) launchable rock spurs composed of 30-inch rock with voids between rocks filled with a mix of 70 percent 1.5-inch aggregate, and 30 percent soil, and (2) rock tiebacks composed of a mix of 60 percent 24-inch rock and 40 percent soil. The transverse rock structures and launchable rock trench would be buried below 2 feet of compacted topsoil and would be exposed only at locations where bank degradation may occur due to natural processes that occur after the Proposed Action is constructed.

Soil and fill would come from on-site or from clean, imported fill material. Rock would be imported. Imported fill material would be from either a tested and approved borrow site, or from a commercial source.

This is consistent with the 2015 404(b)(1) evaluation.

Changes to Disposal Area Elevation

The Proposed Action would change elevations at Site 2-2 and Site 2-3:

- At Site 2-2, the launchable rock toe, rock tie backs, and planting benches would typically increase elevations in the channel by up to 10-15 feet, and the soil-filled rock slope protection would add a 4-foot thick layer of material to bank slopes.
- At Site 2-3, regrading and removal of fill would lower elevations. Planting benches would generally be at elevations from 0–4.6 feet below existing grade. (The rock tie-backs at Site 2-3 would be below the surface of the planting benches and sloped sections of bank between benches and between the upper bench and the existing grade.) The soil-filled rock slope protection would add a 4-foot thick layer of material to bank slopes.

This is consistent with the 2015 404(b)(1) evaluation.

Duration and Extent of Substrate Change

The Proposed Action would create an effectively permanent change of substrate on the riverbanks at Sites 2-2 and 2-3, converting alluvial soils to stone riprap covered with a silty or sandy layer of soil from on-site or of a similar substrate type to the existing condition. A typical bank protection site has an approximate life span of 50 years. *This is consistent with the 2015 404(b)(1) evaluation.*

Migration of Fill

The Proposed Action is designed to avoid significant migration of newly placed fill through the use of geotextiles and the establishment of on-site vegetation. However, during the life span of the bank protection, there would be natural erosion and migration of fill occurring at Site 2-2 and Site 2-3, but at a slower rate than without bank protection. Also, continued bank erosion would lead to the movement of revetment from the launchable rock toe, transverse rock structures, launchable rock trench, or soil-filled rock bank protection onto the lower bank and adjacent channel bed. This would be a localized, rare event, but is likely to occur during the next 50 years. The Proposed Action's erosion protection measures are likely to somewhat reduce the sediment supply for riverine reaches directly downstream because the riprap would hold the bank or levee in place. However, from a system sediment perspective, the bank material that would be protected in the project reaches is not a major source of sediment on the American River. *This is consistent with the 2015 404(b)(1) evaluation.*

Changes to Environmental Quality and Value

Potential impacts to environmental quality and value include a potential temporary increase in turbidity during bank protection construction, runoff of exposed soils, and cement, slurry, or fuel spills during construction. Emissions from construction equipment, haul trucks, and barges also pose a potential impact to environmental quality and value during the duration of construction activities. Best management practices (BMPs) and measures incorporated from the GRR EIS/EIR, with clarifying modifications, would be implemented during construction. There would be permanent changes in substrate and elevations at Site 2-2 and Site 2-3. However, these sites would be designed to be as consistent as feasible with natural riverbanks and channels through the placement of gravels and cobbles (at the lowest elevations), and topsoil over rock layers, installation of IWM, and the planting of riparian vegetation. To the extent feasible, large trees on the lower waterside slope would be left in place to maintain shaded riverine aquatic habitat for special status fish species. *This is consistent with the 2015 404(b)(1) evaluation.*

The Proposed Action would implement BMPs and incorporate the measures from the GRR EIS/EIR, with clarifying modifications. These BMPs and measures include:

- Implementing Sacramento Metropolitan Air Quality Management District's (SMAQMD's) Basic Construction Emission Control Practices and other BMPs to control fugitive dust, runoff, and emissions.
- Implementing enhanced fugitive dust control practices and enhanced on-site exhaust controls in addition to SMAQMD's Basic Construction Emission Control Practices and other BMPs
- Implementing a Storm Water Pollution Prevention Plan (SWPPP), Spill Prevention Control and Countermeasures Plan, and associated BMPs, and coordination with the Central Valley

RWQCB would occur prior to construction through the Clean Water Act Section 401 water quality certification process to ensure that any appropriate measures would be implemented to protect water quality.

- Conducting earthwork during low flow periods (generally May 1 through November 30).
- To the extent possible, staging construction equipment and materials on the landside of the subject levee reaches in areas that have already been disturbed.
- Minimizing ground and vegetation disturbance during project construction by establishing designated equipment staging areas, ingress and egress corridors, spoils disposal and soil stockpile areas, and equipment exclusion zones prior to the commencement of any grading operations.
- Stockpiling soil on the landside of the levee reaches, and install sediment barriers (e.g., silt fences, fiber rolls, and straw bales) around the base of stockpiles to intercept runoff and sediment during storm events. If necessary, cover stockpiles with geotextile fabric to provide further protection against wind and water erosion.
- Installing sediment barriers on graded or otherwise disturbed slopes as needed to prevent sediment from leaving the project site and entering nearby surface waters.
- Installing plant materials to stabilize cut and fill slopes and other disturbed areas once construction is complete. Plant materials could include an erosion control seed mixture or shrub and tree container stock. Temporary structural BMPs, such as sediment barriers, erosion control blankets, mulch, and mulch tackifier, would be installed as needed to stabilize disturbed areas until vegetation becomes established.
- Conducting water quality tests specifically for increases in turbidity and sedimentation caused by construction activities.

This is consistent with the 2015 404(b)(1) evaluation.

3.1.2 Suspended Particulates/Turbidity

The Proposed Action would alter suspended particulate type and concentration or turbidity by:

- Placement of rock, cobble, gravel, and soil fill, which would temporarily generate increased turbidity in the immediate vicinity, potentially resulting in a sediment plume affecting areas further downstream.
- Stormwater runoff from landside construction areas affecting turbidity.

Placement of riprap in the water could result in a sediment plume, generated from the channel bottom and levee side, becoming suspended in the water and would likely generate turbidity levels above those identified as acceptable by the Basin Plan. As rock riprap and other fill is placed in the open water, significant indirect effects could result as a turbidity plume drifts further downstream and later affects water qualify in downstream areas. Coordination with the Central Valley RWQCB would occur prior to construction through the Clean Water Act Section 401 water quality certification process to ensure that any appropriate measures would be implemented to protect water quality, including from turbidity resulting from placement of riprap in water. To reduce effects to a less-than-significant level, the construction contractor would prepare and

implement a SWPPP, and would install, prior to in-water work, a turbidity curtain or other comparable minimization measure. (See also "Actions to Minimize Effects" below.) *This is consistent with the 2015 404(b)(1) evaluation.*

Coordination with Central Valley RWQCB through the Clean Water Act Section 401 water quality certification process the would also ensure that appropriate measures would be implemented to minimize the effects of stormwater runoff on turbidity. The SWPPP would describe the BMPs that would be implemented to contain spills and prevent discharges of stormwater into waterways. BMPs could include but are not limited to straw waddles, geotextile and coir mats, tire wash stations at ingress/egress points to prevent tracking soil offsite onto roadways and entering the municipal stormwater collection system, and sand filter bags at stormwater collection inverts. Potential turbidity effects from landside construction (e.g., vehicle, staging, placement of construction equipment) would be limited to stormwater runoff carrying loose soil from staging areas and construction vehicle access areas. Following construction, BMPs would continue to be monitored and implemented while vegetation matures enough to stabilize surface soil at all of the Proposed Action's construction sites. Further, the installed bank protection would include plantings of native riparian vegetation that could slow flows down and reduce turbidity during flood flows. *This is consistent with the 2015 404(b)(1) evaluation.*

3.1.3 Water

Water Quality

Water Chemistry

The Project Area is in the Sacramento Hydrologic Basin Planning Area and Lower American Hydrologic Subarea, as designated by the Central Valley Regional Water Quality Control Board (RWQCB). Water quality standards for this basin are contained in the Water Quality Control Plan for the Sacramento River Basin and the San Joaquin River Basin (Basin Plan) per Section 303 of the Clean Water Act.

The Basin Plan objective for pH is between 6.5 and 8.5, and discharges cannot result in changes of pH that exceed 0.5. The proposed construction materials (rock and sand or silt soil) have little potential to affect the pH of the American River, and the proposed action.

The Lower American River is listed as impaired for mercury, polychlorinated biphenyls (PCBs), toxicity, bifenthrin (a pesticide), pyrethroids (pesticides) and indicator bacteria.[2] However, the Proposed Action would not involve use of materials containing significant amounts of PCBs, mercury, or pesticides.

Construction of the Proposed Action would include ground disturbance activities that could expose soils to increased rates of erosion during storm events that could increase the rate of sedimentation in receiving waters. Sediment input into the river and turbidity caused by sediment-laden runoff or placement of rock in the river could cause a turbidity plume in the water that

[2] State Water Resources Control Board. 2021. *2014-2016 303(d) List of Impaired Waters*. https://www.waterboards.ca.gov/centralvalley/water_issues/tmdl/impaired_waters_list/#intrpt2014_2016. Accessed January 2021.

could exceed the Basin Plan objective for turbidity in the American River (10 nephelometric turbidity units [NTUs], except during periods of storm runoff). Also use and storage of equipment could result in the accidental spills of fuel, oil, and other construction equipment related materials that could also be carried in stormwater runoff to receiving waters. As a result, there is the potential for construction activities to adversely affect receiving water chemistry.

Construction contractors would be required to prepare and implement a SWPPP and comply with the conditions of the National Pollutant Discharge Elimination System (NPDES) general stormwater permit for construction activity. The contractor would be required to obtain a permit from the Central Valley RWQCB detailing a plan to control any spills that could occur during construction. The plan would describe the construction activities to be conducted, BMPs that would be implemented to prevent discharges of contaminated stormwater into waterways, and inspection and monitoring activities that would be conducted. These avoidance and minimization measures would reduce effects on water chemistry and ensure that the Proposed Action would not violate State water quality standards identified in the Basin Plan or the Toxic Effluent Standards of Section 307 of the Clean Water Act. *This is consistent with the 2015 404(b)(1) evaluation.*

Clarity

Placement of fill materials would temporarily reduce clarity due to an increase in total suspended solids within the Project Area. Clarity is not expected to be substantially affected outside the immediate Project Area. However, the reduction of clarity caused by construction activities would be short in duration and would return to pre-construction levels upon project completion. *This is consistent with the 2015 404(b)(1) evaluation.*

Color

The Proposed Action is expected to affect color only during fill activities. Placement of fill materials would temporarily induce a color change due to an increase in turbidity. These effects would be consistent with those discussed above for clarity. The change in color caused by construction activities would be short in duration and would return to pre-construction levels upon project completion. *This is consistent with the 2015 404(b)(1) evaluation.*

Odor

The Proposed Action would not result in any major sources of odor, and would not involve operation of any of the common types of facilities that are known to produce odors in water (e.g., wastewater treatment facility). Air-borne odors associated with diesel exhaust emissions from the use of construction equipment on site may be noticeable from time to time by adjacent receptors. However, the odors would be intermittent and temporary, would dissipate rapidly from the source with an increase in distance, and are unlikely to affect water odor. Furthermore, as required by California Air Resources Board (CARB) regulation 13 CCR 2449(d)(3), no in-use off-road diesel vehicles may idle for more than 5 consecutive minutes. In addition, implementation of mitigation measures, which are required to reduce other air quality effects, would further reduce exhaust emissions and provide advanced notification of construction activity. *This is consistent with the 2015 404(b)(1) evaluation.*

Taste

The proposed materials and construction activities are not expected to affect taste. *This is consistent with the 2015 404(b)(1) evaluation.*

Dissolved gases

The proposed materials and construction activities are not expected to directly affect dissolved gases. However, to the extent that the Proposed Action results in a temporary increase in water temperature at the project sites, the concentration of dissolved gases would be reduced. The potential effects on water temperature are described in the following section. *This is consistent with the 2015 404(b)(1) evaluation.*

Temperature

The Proposed Action's construction activities have the potential to affect water temperatures by creating substantial turbidity and by removing trees along the lower waterside slope. The project includes measures to control turbidity, in particular the preparation and implementation of a SWPPP, installation of a turbidity curtain and/or other control measures approved by the National Marine Fisheries Service (NMFS), and so the effect of turbidity on water temperature would be minimized. Also, the Proposed Action's design includes planting benches at Site 2-2 and Site 2-3 on which trees and shrubs would be planted and that in the long term would provide shade and result in a beneficial effect on water temperatures. Nonetheless, in the short term the Proposed Action could impact (increase) water temperatures until vegetation at Site 2-2 and Site 2-3 develops. *This is consistent with the 2015 404(b)(1) evaluation.*

Nutrients

The Proposed Action's construction activities have the potential to affect nutrient levels during construction and in the long term. Release of suspended sediments during construction could potentially cause thresholds for nutrients to be exceeded. However, the construction contractor would implement a SWPPP including BMPs that would prevent release of excess nutrients during construction. Long-term nutrient levels would not be substantially altered by the Proposed Action. Its design includes planting benches and restored riparian areas along a created shallow water channel in which trees and shrubs would be planted and at maturity would provide nutrient inputs comparable to the existing shaded riverine aquatic corridor. In addition, nutrients from the upstream watershed would remain in the system. *This is consistent with the 2015 404(b)(1) evaluation.*

Eutrophication

The Proposed Action is not expected to contribute excess nutrients into the stream or promote excessive plant growth during construction or in the long-term. Also, a SWPPP would be prepared and implemented with BMPs that would prevent release of excessive nutrients during construction. Post-construction, surfaces would be revegetated, which would limit nutrient inputs (e.g., from overland flow). Furthermore, nutrient inputs from overland or subsurface flow would be further limited by the high content of rock in the fill material. *This is consistent with the 2015 404(b)(1) evaluation.*

Water Circulation, Fluctuation, and Salinity

At Sites 2-2 and 2-3, the Proposed Action consists of erosion protection measures that are fix-in-place levee improvements that would have no effect on current patterns of water circulation. *This is consistent with the 2015 404(b)(1) evaluation.*

Because the American River system is regulated by upstream dams that allow a specific amount of water to be released into system, the Proposed Action would not change water level fluctuation patterns. *This is consistent with the 2015 404(b)(1) evaluation.*

Because the project sites are located in a freshwater riverine system, the Proposed Action would not alter salinity gradients. *This is consistent with the 2015 404(b)(1) evaluation.*

3.1.4 Contaminants

The Proposed Action's construction activities would involve the use of potentially hazardous material, such as fuels, oils and lubricants, and cleaners, which are commonly used in construction projects. Also, although the five hazardous waste/materials sites identified in the study area of the GRR are not in the Project Area, and no sites in the Project Area were identified through a November 2019 review of the Department of Toxic Substances Control Envirostor database and State Water Resources Control Board Geotracker,[3,4] contaminants could already be present at the construction site.

To minimize the impacts associated with contaminants, the Proposed Action would incorporate the following measures described in the GRR EIS/EIR:

- Construction contractors would be required to use, store, and transport hazardous materials in compliance with Federal, State, and local regulations during project construction and operation.
- Testing of borrow sites would occur prior to the use of material and sites which have contaminated soils would not be used for this project.
- Any hazardous substance encountered during construction would be removed and properly disposed of by a licensed contractor in accordance with Federal, State, and local regulations.
- The risk of significant hazards associated with the transport, use, and disposal of these materials is low, and compliance with applicable regulations would reduce the potential for accidental release of hazardous materials during transport and construction activities.
- Project areas would be tested contaminants prior to construction, and any materials found would be disposed of in accordance with all Federal, State, and local regulations at an approved disposal site.

[3] Department of Toxic Substances Control, 2019. Available: https://www.envirostor.dtsc.ca.gov/public/map/?global_id=CAT080031115. Accessed November 21, 2019 and December 13, 2019.

[4] State Water Resources Control Board. 2019. Geotracker Available: https://geotracker.waterboards.ca.gov/map/?CMD=runreport&myaddress=sacramento. Accessed November 21, 2019 and December 13, 2019.

- The contractor would be required to prepare a SWPPP and a Spill Prevention Control and Countermeasures Plan (SPCCP), which detail the contractor's plans, including BMPs, to prevent discharges from the construction site into drainage systems, lakes, or rivers.

This is consistent with the 2015 404(b)(1) evaluation.

3.2 Biological Characteristics of the Aquatic Ecosystem

(See also the preceding sections "Water Quality" and "Suspended Particulates/Turbidity.")

3.2.1 Fish, Crustaceans, Mollusks, and Other Aquatic Organisms in the Food Web

Plankton

Plankton are drifting plant and animal organisms that inhabit the pelagic zone of oceans, seas, or bodies of fresh water, including the Lower American River at the project sites. Because project construction activities would affect turbidity, incident radiation, water temperature, and inputs of organic matter from bank vegetation at the project sites, the Proposed Action would affect plankton as they passed through this area in the flowing water of the Lower American River.

At Sites 2-2 and 2-3, because project effects on turbidity, water temperature, and incident radiation would be local, temporary, and minimized to less-than-significant levels, and because most plankton would only be transiently present at the project site, effects on total plankton abundance and species composition would be temporary and not substantial. *This is consistent with the 2015 404(b)(1) evaluation.*

Benthos

At the project sites, the American River has a sandy/silty bottom and natural banks, which have benthic macroinvertebrates. Disturbance during construction and placement of revetment on banks and the immediately adjoining channel bed will cause temporary impacts to benthic organisms. But following construction, where surfaces have a sandy/silty substrate, benthic organisms would recolonize the area. Where constructed surfaces have rock, cobble, or gravel substrates, native benthic organisms also would be expected to colonize the area, particularly after spaces between the rock, cobble, or gravel capture sediment traveling downstream, providing benthic surfaces similar to existing conditions. *This is consistent with the 2015 404(b)(1) evaluation.*

Nekton

Nekton are actively swimming aquatic organisms that range in size and complexity from plankton to marine mammals. Native fish present in the Project Area can be separated into anadromous species and resident species. Native anadromous species include Central Valley spring-run Chinook salmon, Sacramento River winter-run Chinook salmon, fall/late-fall run Chinook salmon, and California Central Valley steelhead trout.

Rock placement during construction would most likely disturb the native resident fish by increasing vibration, water turbulence, and turbidity, which could affect local fish physiology,

behavior, and habitat. The Proposed Action would temporarily eliminate the bankside vegetation that is an element of SRA habitat. The Proposed Action includes the installation of instream woody material and planting riparian vegetation on benches at Sites 2-2 and 2-3 that would have a beneficial effect on SRA habitat once the trees and shrubs mature. At Sites 2-2 and 2-3, the natural bank element of SRA habitat would also be temporarily lost with the placement of rock along banks. Over time, however, sediment would settle into the rock voids and provide similar substrate characteristics as a natural bank.

The direct and indirect effects resulting from the Proposed Action would not substantially worsen existing conditions temporarily, and would not result in a substantial temporary reduction in native resident fish population abundance, movement, and distribution. In the long-term, the direct and indirect effects resulting from the Proposed Action would improve conditions and could contribute to an increase in native resident fish population abundance, movement, and distribution. *This is consistent with the 2015 404(b)(1) evaluation.*

Aquatic Food Web

Effects on the plankton, benthic, and nekton communities can affect the broader the aquatic food web, which includes marine mammals that feed on Chinook salmon and steelhead that spawn and rear in the Lower American River before migrating to the Pacific Ocean. However, the Proposed Action's adverse effects on the aquatic food web, or the plankton, benthic, and nekton communities, and thus the aquatic food web would be temporary, as described in the preceding sections. The Proposed Action's long-term effects would be beneficial because of created SRA, and riparian habitat planting along the Lower American River, which would beneficially affect physical conditions and resource availability. *This is consistent with the 2015 404(b)(1) evaluation.*

3.2.2 Threatened and Endangered Species

Two species federally listed as threatened are known to be present in the Project Area, and thus would be affected by the Proposed Action: Valley elderberry longhorn beetle (VELB) and California Central Valley steelhead. Three other federally listed species are likely to occur in the Project Area: western yellow-billed cuckoo (threatened), Sacramento River winter-run Chinook salmon (endangered), and Central Valley spring-run Chinook salmon (threatened). The Project Area is not within designated critical habitat for any listed terrestrial wildlife species, but it is within designated critical habitat for Central Valley spring-run Chinook and California Central Valley steelhead.

Riparian vegetation along the lower American River provides habitat for the valley elderberry longhorn beetle (VELB), and suitable stop-over habitat for the western yellow-billed cuckoo. Sites 2-2 and Site 2-3 contain 9.27 acres of VELB habitat (i.e., elderberry shrubs and riparian vegetation within 25 meters [82 feet] of them). A total of 15.11 acres of riparian vegetation would be affected at Sites 2-2 and 2-3 erosion protection areas and up to an additional 2.47 acres in the construction access areas and haul routes. Some of the riparian habitat in access areas may be avoided, if feasible.

Measures to minimize and mitigate impacts to VELB would be implemented in accordance with the 2017 *Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle*[5]. The affected elderberry shrubs would be transplanted to elderberry shrub mitigation sites along the Lower American River.

The Project Area is unlikely to support nesting western yellow-billed cuckoos because nesting cuckoos have not been documented in along the Lower American River, and riparian vegetation in the Project Area is narrow with a high level of human disturbance. Nonetheless, pre-construction surveys would be conducted for the species. If nesting birds are detected, worker environmental awareness training would be conducted and avoidance buffers would be established. Riparian habitat within the Project Area also could support occasional foraging by cuckoos.

To mitigate the unavoidable impacts on habitat for VELB and yellow-billed cuckoo, USACE would create replacement riparian habitat at ratios of 3:1 (acres replaced to acres affected) and 2:1, respectively. Total of 51.63 acres of riparian habitat would be created, of which 19.31 acres would be created on site.

Construction of the Proposed Action would impact SRA habitat for salmonids. Within the 8,148 linear feet within the construction footprint for Sites 2-2 (1,259 feet) and 2-3 (6,889 feet), an estimated 5.44 acres of SRA and benthic habitats would be affected by construction activities.

However, the Proposed Action incorporates installation of IWM and riparian planting benches at Sites 2-2 and 2-3. This restored and created SRA habitat would provide SRA habitat similar or better existing habitat once trees and shrubs mature, and thus, in the long-term, would improve habitat conditions for California Central Valley steelhead, Sacramento River winter-run Chinook salmon, and Central Valley spring-run Chinook salmon. However, in the short term, while trees and shrubs on planting benches are maturing, there would be an adverse impact on SRA habitat for these species. To mitigate this short-term impact, the Proposed Action would create off-site SRA habitat in the American River Parkway in coordination with USFWS and NMFS.

The placement of fill materials by the Proposed Action would not jeopardize the continued existence of any species listed as threatened or endangered or result in the likelihood of destruction or adverse modification of any critical habitat as specified by the Endangered Species Act of 1973. *This is consistent with the 2015 404(b)(1) evaluation.*

3.2.3 Other Wildlife

The project site is used by a variety of species associated with annual grassland, mixed oak woodland, upland and riparian scrubs, riparian woodland, non-native woodland, and riverine habitats. Effects on fish species using riverine habitat at the project site are discussed in the preceding section regarding effects on the nekton. Grading and other ground-disturbing activities, noise from construction activities, and removal of vegetation could disrupt movement and foraging, or displace, injure, or kill wildlife. However, these effects would be temporary and

[5] U.S. Fish and Wildlife Service. 2017. *Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle* (*Desmocerus californicus dimorphus*). U.S. Fish and Wildlife Service; Sacramento, CA.

many affected species would be expected to return to areas affected by construction once such work is completed. Additionally, there would be extensive similar, unaffected, areas of riparian, oak woodland, and grassland habitat in the vicinity of the project site and along the Lower American River that could be used by these species. Therefore, for most species of terrestrial wildlife, the Proposed Action would not result in a substantial reduction in population abundance, movement, and distribution. However, in addition to the species federally listed as threatened or endangered that were discussed previously, a number of special-status species likely use the project site. These species are less abundant, have more limited distributions, and are more vulnerable to population-level effects than common wildlife species. These special-status species include western pond turtle, American badger, pallid bat and western red bat, and several raptors and other birds that may nest at or in the vicinity of the project site (Swainson's hawk, Cooper's hawk, white-tailed kite, burrowing owl, great egret, great blue heron, and purple martin).

To minimize potential effects on these special-status species, the applicable avoidance and minimization measures from the GRR EIS/EIR have been incorporated into the Proposed Action, with revisions to reflect the revised Project Area and current mitigation requirements. These measures include worker environmental awareness training; pre-construction surveys for western pond turtles, bat maternity roosts, American badger dens, and nesting birds; and establishment of avoidance buffers as necessary. Implementing these measures would protect maternity roosts of special-status bats, and avoid or minimize effects on western pond turtle, American badger, and nesting birds.

Furthermore, on-site replacement of riparian habitat and restoration of riparian habitat off site as compensatory mitigation would provide replacement habitat at a 2:1 ratio, which in the long-term would improve habitat conditions for riparian-associated species. *This is consistent with the 2015 404(b)(1) evaluation.*

3.2.4 Cumulative Effects on the Aquatic Ecosystem

Effects of the proposed action include temporary reductions in nearshore aquatic and riparian habitats that are used by aquatic and terrestrial species, and permanent placement of riprap on earthen bank that alters natural fluvial processes that sustain high-value nearshore and floodplain habitats in alluvial river systems.

Ongoing non-federal activities that effect listed salmonids and valley elderberry longhorn beetle, and their habitat, will likely continue in the short-term, at intensities similar to those of recent years. However, some activities associated with the State's proposed Central Valley Flood Protection Plan or state or local efforts to implement the Engineering Pamphlet (EP) 1110-2-18 could result in increased effects on listed species. Potential cumulative effects on fish also may include any continuing or future non-federal diversions of water that may entrain adult or larval fish or that may incrementally decrease outflows or water quality, thus changing habitat for these species.

Potential cumulative effects on all species discussed above could include: wave action in the water channel caused by boats that may degrade riparian and wetland habitat and erode banks; dumping of domestic and industrial garbage; land uses that result in increased discharges of pesticides, herbicides, oil, and other contaminants; and conversion of riparian areas for urban

development. In addition, routine vegetation clearing and mowing associated with agricultural practices may affect or remove habitat for the valley elderberry longhorn beetle.

3.3 Special Aquatic Sites

Within the Project Area, there are no sanctuaries and refuges, mud flats, vegetated shallows, coral reefs, or riffle and pool complexes.

However, wetlands are present at the project site and would be affected by the Proposed Action. During development of the detailed design of the Proposed Action, reasonable efforts were taken to avoid disturbance of these existing wetlands and to implement environmentally sustainable designs. Nonetheless, at Site 2-2 and Site 2-3, a total of 4.39 acres of wetland (2.99 acres of forested wetland [riparian woodland] and 1.40 acres of riparian scrub wetland) would be impacted, and would be replaced with 8.65 acres of wetland (3.93 acres of forested wetland and 4.72 acres of riparian scrub wetland) at these sites. The wetlands restored and created by the Proposed Action are being designed in coordination with NMFS and USFWS as part of the consultation under the Endangered Species Act. *This is consistent with the 2015 404(b)(1) evaluation.*

3.4 Human Use Characteristics

3.4.1 Municipal and Private Water Supplies

Proposed Action's fill material would not violate Environmental Protection Agency or State water quality standards or violate the primary drinking water standards of the Safe Drinking Water Act (42 USC 300f-300j). Also, the Proposed Action's design, compliance with State water quality thresholds and standard construction and erosion practices would preclude the introduction of substances into surrounding waters, and materials removed for disposal off site would be disposed of in an appropriate landfill or other upland area. *This is consistent with the 2015 404(b)(1) evaluation.*

3.4.2 Recreation and Commercial Fisheries

The Proposed Action would cause temporary closure of recreation facilities in the American River Parkway during construction. A large portion of the Campus Commons Golf Course is in the footprint of Site 2-3, and the golf course is anticipated to be closed for approximately 2 years. Also, recreational access to the river bank at Sites 2-2 and 2-3 would be completely restricted during the construction period because of the construction activities and associated potential hazards to recreationists, including those fishing, swimming, and boating.

Also, access along all the open available recreational trails would be impaired at locations where construction equipment would cross from landside staging areas to construction sites or would be hauling in materials from off site to the staging areas.

To minimize these effects on recreation, the Proposed Action incorporates, with clarifying modifications, the related mitigation measure in the GRR EIS/EIR. This measure includes notification and coordination with user groups, posting signage, use of flaggers and traffic control, provision of marked detours for all bicycle trails and on-street bicycle routes, posting

alternative access points if any access points are closed, and restoring access and repairing any damage to recreational facilities to pre-project conditions. *This is consistent with the 2015 404(b)(1) evaluation.*

Further, proximity to construction equipment and activities may degrade the quality of recreational experiences due to noise, odors, and air pollutants. To minimize these effects on recreation, the Proposed Action incorporates, with clarifying modifications, the related mitigation measures in the GRR EIS/EIR. These measures require that construction equipment be equipped with factory-installed muffling devices, that all equipment be operated and maintained in good working order, unnecessary engine idling be limited, equipment specifically designed to generate low levels of noise be used, electric construction equipment be used to the extent available and feasible. *This is consistent with the 2015 404(b)(1) evaluation.*

The Proposed Action would impact habitat for commercial fish species by causing temporary increases in turbidity and short-term loss of the elements of SRA habitat. (The Proposed Action incorporates riparian planting benches at Sites 2-2 and 2-3 that in the long-term would improve SRA habitat conditions.) As described previously under "Suspended Particulates/Turbidity," increases in turbidity would be minimized to a less-than-significant level through implementation of a SWPPP and associated BMPs, and installation, prior to in-water work, of a turbidity curtain or other comparable minimization measure. The short-term adverse impact on SRA habitat would be mitigated by the creation of off-site SRA habitat along the Lower American River. *This is consistent with the 2015 404(b)(1) evaluation.*

3.4.3 Aesthetics

The Proposed Action would result in vegetation loss and construction activities that would disrupt the existing visual conditions in the Parkway. Trees would be planted after construction is completed on planting benches at Sites 2-2 and 2-3, and disturbed areas would be reseeded with native grasses and shrubs where appropriate. However, there would still be a temporal loss of vegetation. In addition, the Proposed Action incorporates an GRR EIS/EIR mitigation measure that would also plant additional trees at other areas in the Parkway according to the Parkway Plan to mitigate for the removal of the trees. *This is consistent with the 2015 404(b)(1) evaluation.*

3.4.4 Parks, National and Historic Monuments, National Seashores, Wilderness Areas, Research Sites, and Similar Preserves

The Proposed Action would affect Construction of the Proposed Action would last for approximately 1.5 years. During that time, it would affect the American River Parkway, and within the parkway, it would affect the Jedediah Smith Memorial Trail, Campus Commons Golf Course, and University Dog Park.

The Proposed Action incorporates, with clarifying modifications, the mitigation measure in the GRR EIS/EIR that would minimize potential effects to recreational users. This measure includes notification and coordination with user groups, posting signage, use of flaggers and traffic control, provision of marked detours, posting alternative access points if any access points are

closed, and restoring access and repairing any damage to recreational facilities to pre-project conditions. *This is consistent with the 2015 404(b)(1) evaluation.*

The Proposed Action would result in only localized and temporary closures, and the proposed improvements at Sites 2-2 and 2-3 would reduce the potential for future closures of recreational facilities. The Proposed Action would also not preclude future access to recreational areas. Therefore, it would not conflict with the purposes and intents of the American River Parkway Plan and the Wild and Scenic Rivers Act. *This is substantially consistent with the 2015 404(b)(1) evaluation.*

4.0 Other Considerations

The revegetation within the planting bench is in accordance of EP 1110-2-18, which provides guidelines to assure that landscape planting and vegetation management provide aesthetic and environmental benefits without compromising the reliability of levees, floodwalls, embankment dams, and appurtenant structures.

Logistically, there are no major encumbrances to completing the work. Local ordinances and real estate are not an issue for the Project sites.

The Proposed Action is fully funded. This action is part of the American River Common Features Project which was included in the FY18 Bipartisan Budget Act (Public Law [P.L.]115-123) which funded $1.56B of the remaining design and construction efforts (full first cost). Receipt of full-funding changed the approach of the project execution substantially and reduced the overall timeline to five years, with a targeted completion of all flood risk reduction features by January 2023. The construction schedule has the construction to be completed in 2022.

H2 Arden Pond Mitigation Project Clean Water Act Section 404(b)(1) Evaluation

APPENDIX H-2

Arden Pond Mitigation Project Clean Water Act Section 404(b)(1) Evaluation

1.0 Introduction

The proposed Arden Pond Mitigation Project (proposed mitigation project) is located in the William B. Pond Recreation Area on the right bank floodplain at approximately Lower American River (LAR) River Mile (RM) 12. The main stem of the river channel is single threaded upstream and downstream of the pond area. At RM 13.2, there is a system of braided side channels along the river right that conveys flows through the 29.5-acre pond. The outlet of the pond transitions into the main channel at RM 11.9. The pond is currently a recreational attraction for fishing and river sport activities. The pond provides habitat for native and non-native warm water fish throughout the year.

The proposed mitigation project would be constructed to meet the compensatory mitigation requirements of the National Marine Fisheries Service (NMFS) and United States Fish and Wildlife Service (USFWS) Biological Opinions (BOs) for the American River Watershed Common Features project (ARCF). The ARCF is to improve the existing infrastructure to reduce flood risk along the American and Sacramento Rivers. For more information on the ACRF, see the ARCF *General Reevaluation Report* (GRR) *Final Environmental Impact Statement/ Environmental Impact Report* (EIS/EIR) (U.S. Army Corps of Engineers [USACE] 2016)[1] and the *American River Watershed Common Features 2016 American River Contract 2*[2] *(Contract 2)—Supplemental EIS/EIR* (USACE 2021). A 404(b)(1) analysis was completed for the ARCF (Appendix E of the GRR EIS/EIR). A consistency analysis with the ARCF 404(b)(1) analysis was prepared for Sites 2-2 and 2-3 (Appendix H-1).

1.1 Basic Project Purpose

The basic project purpose is to fulfil the mitigation requirements of the ARCF GRR NMFS and USFW BOs. The project is considered water dependent as it requires access, proximity to, and siting in a special aquatic sites (Arden Pond and the Lower American River).

---

1 U.S. Army Corps of Engineers and Central Valley Flood Protection Board. 2016. *American River Watershed General Reevaluation Report, Final Environmental Impact Statement / Environmental Impact Report.* December. Sacramento, California. State Clearing House Number 2005072046.

2 USACE. 2021. American River Watershed Common Features 2016 American River Contract 2—Supplemental EIS/EIR. State Clearing House Number 2005072046

1.2 Overall Project Purpose

The overall project purpose is to construct a mitigation project, including forested wetland and other riparian vegetation and Shaded Riverine Aquatic (SRA) habitat to fulfil the mitigation requirements of the ARCF GRR NMFS and USFWS BOs for mitigation applicable to Contract 2 and other phases of ACRF.

2.0 Alternatives Analysis

An evaluation of alternatives is required under the Section 404(b) (1) Guidelines for projects that include the discharge of dredged or fill material. Under the Guidelines, practicability of alternatives is taken into consideration and no alternative may be permitted if there is a less environmentally damaging practicable alternative (40 Code of Federal Regulations [CFR] 230.5(c)).

2.1 Alternative Screening Criteria

Alternative screening criteria were developed in evaluating alternatives as described below. This screening criteria also considers the Section 404(b)(1) practicability factors. An alternative is practicable if it is available and capable of being done after taking into consideration cost, existing technology, and logistics in light of overall project purposes (40 CFR 230.10(a)(2)).

Screening criteria for evaluating alternatives are:

1. Meets the overall project purpose (as defined by the Corps) by constructing a mitigation project, including forested wetland and other riparian vegetation and SRA habitat to fulfil the mitigation requirements of the NMFS and USFWS ARCF GRR BOs for mitigation applicable to Contract 2 and other phases of ARCF

   As mitigation for ARCF that meets the requirements of the NMFS and USFWS BOs, the alternative would create a net increase of at least 9.36 acres of forested wetland and other riparian habitat along the Lower American River suitable for yellow-billed cuckoo and valley elderberry longhorn beetle, and that provides SRA habitat for salmonids. This acreage represents potential unmet mitigation needs for Contract 2.

2. Results in a net increase in habitat values of the LAR system

   The alternative would:

   - Maintain or increase riparian habitat within the Parkway to promote the continued and reestablished use of this habitat type
   - Improve channel margin habitat conditions (e.g. shaded riverine aquatic habitat)
   - Increase local production of organic materials and organisms that support the aquatic foodweb.
   - Reduce predation on salmonids by non-native warm-water fish

3. Does not expose people or structures to a significant additional risk of loss, injury, or death involving flooding.

The alternative would not cause the area of the Federal Emergency Management Agency's (FEMA's) high flood risk zone (i.e., 1 percent annual chance exceedance [ACE] flood map) to be expanded, and would not be in conflict with the State of California's 0.5 percent ACE urban flood protection requirement, as a result of increasing water surface elevations during 115,000–160,000 cubic feet per second (cfs) events.

4. Does not substantially impact significant cultural resources

   The alternative would not:

   - Diminish the integrity of a cultural resource qualifies for the NRHP
   - Materially impair the significance of a historic resource or unique archaeological resource
   - Require the demolition of a historic resource
   - Disturb any Native American human remains
   - Result in a substantial adverse change in the significance of a Tribal Cultural Resource

In addition, the alternatives were also screened using the following practicability factors:

- **Cost** – Cost is analyzed in the context of the overall scope/cost of the project and whether it is unreasonably expensive (e.g. cost to construct consistent with ARCF GRR Habitat Mitigation and Monitoring and Adaptive Management Plan and available funding).
- **Existing Technology** - The alternatives examined should consider the limitations of existing technology yet incorporate the most efficient/least-impacting construction methods currently available.
- **Logistics** - The alternatives evaluated may incorporate an examination of various logistics associated with the project (e.g. not conflict with the purposes and intents of the American River Parkway Plan; have support of the Sacramento County Department of Parks and Recreation [County Parks] and the American River Flood Control District; and/or have support of public agency owner or if privately owned, owner is a willing seller or the property can be secured within the required timeframe for implementing the project.

2.2 Description of alternatives

2.2.1 No-Action Alternative

Under the No Action Alternative, the proposed mitigation project would not be constructed. As a result, the required mitigation from the NMFS and USFWS BOs would not be met and portions of the ARCF GRR would not be constructed. Therefore, the USACE or the CVFPB would not conduct any additional work to address seepage, slope stability, overtopping, or erosion concerns in the Sacramento metropolitan area. The local maintaining agency (LMA) would address vegetation and encroachments over time under the System-Wide Improvement Framework agreement, which would improve the condition of the levee system, but it would be speculative to assume that any additional work would be conducted to address the seepage, slope stability, overtopping, or erosion concerns in the project area.

2.2.2 Off-site Alternatives

This section describes off-site alternatives, such as different locations long the American River that provide the riparian and SRA habitat mitigation and mitigation/conservation banks that could provide mitigation credits for ARCF Contract 2.

Twenty-seven sites along the American River were screened for their potential to be restored as mitigation for the American Rivers Common Features Project based on their availability, the type of mitigation that could be developed, known constraints (e.g. utilities, existing land uses), and the compatibility of surrounding land uses with mitigation (GEI 2020). Eight of the 27 sites evaluated were identified as potential mitigation sites. At six of these eight potential mitigation sites, mitigation is being developed for a phase of ARCF, and one of the eight sites has been removed from further consideration because of constructability concerns. The remaining potential mitigation site, the Urrutia Mining Pit Reclamation, is an off-site alternative to the proposed mitigation project.

Mitigation/Conservation Banks

The mitigation credits could be purchased from mitigation or conservation banks to provide the required mitigation for ARCF Contract 2. Although there are no mitigation or conservation banks along the Lower American River, the Cosumnes Floodplain Mitigation Bank and Bullock Bend Mitigation Bank (along the Cosumnes River and Sacramento River, respectively) have mitigation credits available for salmonid riverine/riparian, floodplain riparian, floodplain mosaic wetland, and shaded riverine aquatic credits that could be acceptable as mitigation for ARCF Contract 2 (USACE 2021b).

Urrutia Mining Pit Reclamation

The Urrutia Site is along the American River approximately one mile upstream of its junction with the Sacramento River. The majority of this site is owned by Henry and Carmen Urrutia Limited Partnership. The remaining portions are owned by Sacramento County.

The site contains an approximately 57-acre pond surrounded by annual grassland with smaller areas of Fremont cottonwood-dominated riparian forest. Five acres of riparian forest borders the American River and provides SRA habitat.

The floodplain in this area is approximately 20-ft above summer WSEs and the site is only connected to the American River at very high flows. The existing high ground between the pond and the river inundates between 70,000 and 115,000 cfs, depending on Sacramento River WSEs.

The conceptual restoration design for this site consists of a large floodplain bench with three channels from this restored floodplain to the American River (GEI 2020,). To create this floodplain bench, more than 1,000,000 cubic yards of material would be cut from the higher portions of the site and placed as fill into the existing pond. The 126-acre restoration area would be graded so that approximately 119 acres would have elevations below OHW and that would maximize the value of salmonid rearing habitat and shaded riparian aquatic habitat. All existing vegetation would be temporarily removed by this grading, including the 5 acres of riparian vegetation providing SRA. This restoration concept would result in approximately 94 acres of

riparian forest or scrub that would be forested wetland (an increase of approximately 89 acres) and provide SRA habitat, and an additional 25 acres of SRA habitat provided along the three created channels for a total of 119 acres of SRA habitat (a net increase of almost 114 acres).

2.2.3 On-site Alternatives

Two alternative design concepts have been proposed at the Arden Pond site. The primary difference between these designs is the elevation that the existing pond would be filled and raised to and as a result the amounts of different types of habitat restored. These two alternatives are described below and their direct effects on waters of the U.S. are summarized in Table H2-1.

TABLE H2-1
SUMMARY OF EFFECTS OF ON-SITE ALTERNATIVES ON WATERS OF THE U.S.

Effect	Attribute	Shallow Water Channel-Emergent Wetland	Shallow Water Channel-Forested Wetland
Temporary Disturbance (acres)	Restoration areas at Arden Pond, and East and West Mitigation Sites—graded, filled	27.04	28.84
	Remainder of Arden Pond—dredged	11.3	9.5
	Total	**38.34**	**38.34**
Volume of fill (cubic yards)	**Total**	**130,000**	**226,000**
Change in extent of Waters of the U.S. (acres)	Emergent wetland	+12.16	-0.04
	Forested wetland	+5.06	+25.80
	Non-native grassland	-0.01	-0.01
	Open water	-13.77	-20.19
	Unvegetated	-0.45	-0.45
	Total	**+2.99**	**+5.11**

Arden Pond—Shallow Water Channel-Forested Wetland (Proposed Mitigation Project)

The proposed mitigation project would be located on the right bank floodplain of the American River at approximately RM 12 (USACE 2021a). It includes restoration of riparian vegetation and Shaded Riverine Aquatic (SRA) habitat, and the planting and transplanting of elderberry shrubs. The primary components of the proposed mitigation project include:

- an earth-filled berm dividing Arden Pond into a pond north of the berm and a shallow side channel of the American River south of the berm;
- A Bass Pond (9.5 acres in size) within the existing footprint of Arden Pond to continue providing opportunities for recreational fishing, in which elevations would be lowered to improve habitat conditions
- A shallow side channel within the existing footprint of Arden Pond providing rearing, migration, and potentially spawning habitat for salmon with two design features:
  - a shallow flow area with depths between 2 and 3 feet at 3,900 cfs during the winter/springs months

  - riparian vegetation plantings along the shallow flow areas to create SRA habitat

- A channel lined with 0.5–4-inch rock that connects the shallow side channel habitat to the American River

- Two inundated floodplain mitigation sites (a 7.1-acre "West" and a 2.3-acre "East" Mitigation Site) to be lowered from their current elevation above the 2-year water surface elevation to the 2,660 cfs water surface elevation with gradual slopes and planting benches excavated above 2,660 cfs water surface elevation

- Construction of the Arden Pond Mitigation Site would involve placement of up to 330,000 cubic yards of soil into the restoration area, which is to come from the cut bank excavation of Site 2-3, excavated material from the bass pond, and excavated materials from the West and East Mitigation Sites (see description below). Approximately 226,000 cubic yards of fill material would be placed in the existing pond to create the north berm, south berm and the shallow side channel. The design would create 1- to 3-foot deep shoals in a channel at elevations of 1 to 3 feet below the 3,900 cfs flow water surface elevation up to the existing vegetated shoreline edges and the new berm.

This alternative would temporarily impact 38.34 acres of waters of the U.S. (i.e., open water and land below the OHWM of the American River), including 4.85 acres of forested wetland (i.e., riparian forest, woodland, and scrub) and 0.04 acres of emergent wetland. It would also temporarily impact 7.09 acres of upland (i.e., above the OHWM of the American River).

This alternative would restore all disturbed waters of the U.S., and create an additional 5.11 acres of waters of the U.S.

By increasing the elevation of the portion of Arden Pond that is in the restoration area, and lower elevations at the East and West Mitigation Sites, the alternative would create an additional 25.8 acres of forested wetland for a total of 30.65 acres (versus the existing 4.85 acres). (After regrading of the site, the existing 0.04 acres of emergent wetland would be restored as forested wetland.) All 30.65 acres of forested wetland would serve as SRA habitat.

This alternative would reduce the acreage of riparian vegetation above the OHWM from 3.54 acres to 2.55 acres, and thus, total riparian vegetation, both above and below the OHWM would be increased from 8.39 acres to 33.2 acres.

Arden Pond—Shallow Water Channel-Emergent Wetland

Similar to the proposed mitigation project, this alternative would construct a berm across Arden Pond and restore a shallow water channel south of the berm and retain a pond (the Bass Pond) to the north of the berm (i.e., the Bass Pond) (NHC 2019). The combined acreage of the restoration area and the Bass Pond would be the same as the proposed mitigation project (Arden Pond—Forested Wetland), and it also would include the East and West Mitigation Sites. However, within the restoration area at Arden Pond, the retained Bass Pond would be 1.8 acres larger than under the proposed mitigation project, and the area of open water filled would be 1.8 acres less.

The primary distinctions between this alternative and the proposed mitigation project are that the Bass Pond would be larger (11.3 acres versus 9.5 acres), and in the Arden Pond portion of the

restoration area, the shallow water channel would be wider and bordered by emergent wetland and riparian vegetation as opposed to just riparian vegetation. This alternative would restore approximately 6.7 acres of shallow open water habitat, 12.2 acres of emergent wetland habitat, 9.9 acres of riparian habitat below the OHWM (forested wetland) and 2.3 acres of riparian habitat above the OHWM (a total net increase of 3.8 acres).

Because this alternative fills a smaller portion of Arden Pond and creates emergent wetland, which is at a lower elevation than forested wetland and upland riparian, it requires less fill than the proposed mitigation project: the conceptual design for this alternative estimated that it would require approximately 170,000 cubic yards of fill with 130,000 cubic yards placed within Arden pond as opposed to 330,000 and 226,000 cubic yards, respectively, under the proposed mitigation project (NHC 2019).

2.3 Practicability of Alternatives

This section first provides screening of alternatives based on the four alterative screening criteria listed in Section 2.1, Alternative Screening Criteria, and then screened for practicability factors, if applicable.

2.3.1 No-Action Alternative

The no-action alternative meets only two of the four screening criteria. (It would not substantially impact a significant cultural resource and would not expose people or structures to significant additional risk of loss, injury, or death involving flooding). The no-action alternative would not construct a mitigation project by restoring riparian vegetation and SRA habitat, and the planting and transplanting of elderberry shrubs to fulfil the mitigation requirements of the ARCF GRR NMFS and USFWS BOs (NMFS 2015; USFWS 2015, 2021). Therefore, the no-action alternative would not achieve the overall project purpose. Since the no-action alternative would not achieve the overall project purpose, screening for cost, existing technology and logistics is not needed. The no-action alternative is not a practicable alternative.

2.3.2 Off-site Alternative

Mitigation/Conservation Banks

This alternative would fulfill the overall project purpose and meets two of the four screening criteria (does not expose people or structures to a significant additional risk of loss, injury, or death involving flooding, and does not substantially impact significant cultural resources). However, it would result in a net decrease, not a net increase, in habitat values of the LAR system because mitigation would be provided elsewhere. (No mitigation/conservation banks are located along the LAR). Also, this alternative does not meet the overall project purpose as the BOs for the project require mitigation along the LAR. Since this alternative would not achieve the overall project purpose, screening for cost, existing technology and logistics is not needed. The mitigation/conservation banks alternative is not a practicable alternative.

Urrutia Mining Pit Reclamation

This alternative would fulfill the overall project purpose and meets all four of the screening criteria in Section 2.1. However, this alternative is not logistically practicable as the mitigation site associated with this alternative was not available from a willing seller at the time of this evaluation, and thus would not be available within the required timeframe for implementing the project. Therefore, the Urrutia Mining Pit Reclamation alternative is not a practicable alternative.

2.3.3 On-site Alternatives

Arden Pond—Shallow Water Channel-Forested Wetland (Proposed Mitigation Project)

This on-site alternative meets all six screening criteria. Therefore, this is a practicable alternative.

Arden Pond—Shallow Water Channel-Emergent Wetland

This alternative meets three of four screening criteria. However, it would not meet the overall project purpose by restoring enough forested wetland and other riparian habitat to meet the requirements of the NMFS and USFWS ARCF GRR BOs applicable to Contract 2 of ARCF. Since this alternative would not achieve the overall project purpose, screening for cost, existing technology and logistics is not needed. The Arden Pond—Shallow Water Channel-Emergent Wetland alternative is not a practicable alternative.

2.4 Least environmentally damaging practicable alternative under the 404(b)(1) Guidelines

The proposed mitigation project is the only practicable alternative, and therefore is the least environmentally damaging alternative.

2.5 Evaluation for Compliance with the Section 404(b)(1) Guidelines

The following sequence of evaluation is consistent with 40 CFR 230.5. In summary, based on the alternative analysis above, the no-action alternative, which would not involve discharge into waters, is not practicable.

It has been determined that there are no alternatives to the proposed discharge that would be less environmentally damaging. (Subpart B, 40 CFR 230.10(a)).

The proposed mitigation project with proposed discharge in this evaluation is the practicable alternative with the greatest net benefits in terms of fish habitat quality over lesser onsite alternatives.

3.0 Proposed Mitigation Project and Its Potential Effects

3.1 Disposal Site

At the site of the proposed mitigation project, the LAR's main channel flows along the east and south sides of Arden Pond through a sharp southwest to west bend. The main stem of the river channel is single threaded upstream and downstream of the pond area. At RM 13.2, there is a system of braided side channels along the right bank of the river that conveys flows through the approximately 33-acre pond. The outlet of the pond transitions into the main channel at RM 11.9.

The existing Arden Pond fills a gravel mining pit within the larger Arden Bar landform and is bordered by a perimeter berm that was constructed during the mining period to separate the American River's main channel from the pit. The typical depth of the pond is around 7 feet when flows in the LAR are at 3,900 cfs.

Due to past mining alterations to the original Arden Bar, Arden Pond is in an actively changing riverine environment at RM 12–13, which coincides with a significant transition of the Lower American River from a higher gradient, gravel bed river to a lower gradient channel. This gravel bed reach is characterized by actively forming and shifting gravel bars.

The vegetation surrounding the pond includes grasses, emergent plants (tules), several species of willows, box elder, cottonwoods, valley and live oaks, shrubs, and upland grasses. The shoreline vegetation of woody species occurs above the summer low water level elevation of 30 feet (NAVD 88).

A delineation conducted in January 2021 for the Arden Pond mitigation project site identified approximately 77.18 acres of potential waters of the United States, which was composed of 56.96 acres of perennial riverine (i.e., the American River), 17.49 acres of seasonally flooded forested wetlands that are comprised of a riparian woodland overstory and a riparian scrub understory, 2.11 acres of seasonally flooded scrub, which is comprised primarily of riparian scrub with no overstory, and 0.62 acres of emergent wetland occur within the Arden Pond Mitigation Site (ESA 2021).

3.2 Potential Impacts of Proposed Mitigation Project

3.2.1 Potential Impacts on Physical and Chemical Characteristics of the Aquatic Ecosystem

The proposed mitigation project would result in moderate permanent changes to the substrate through grading and fill, and would result in minor temporary impacts to suspended particulates/ turbidity. The resulting activity when completed would change current flow patterns and water circulation in the localized area by creating additional forested wetlands, and SRA habitat; it also would create a shallow side channel connected to the main channel of the LAR. Adverse effects would be minimized through compliance with the Section 401 Water Quality Certification, the

proposed construction of storm water detention/retention facilities, as well as installation of best management practices and erosion control measures, and restoration of riparian vegetation.

Substrate

The proposed mitigation project would permanently alter the elevation of the substrate at the project site to construct:

- A shallow side channel connected to the main channel of the American River
- Two berms that separate the constructed shallow channel from the northern portion of Arden Pond (retained as the Bass Pond) and from the main channel of the American River
- Two inundated floodplain mitigation sites (approximately 7.5-acre "West" and a 5.0-acre "East" Mitigations Sites) to be excavated to the 2,660 cfs water surface elevation with gradual slopes and planting benches excavated above this elevation

Elevations would be both lowered and raised:

- To create the berms north and south of the shallow side channel, elevations would be increased by up to 10 and 6 feet, respectively.
- Along the flow line of the constructed channel, elevations would be increased by 2–4 feet.
- Elevations in the Bass Pond would be lowered by 0–6 feet. Excavation at the bottom of the bass pond would vary and portions of the pond that area already at elevation 25 or lower will not be excavated.
- At the river connection of the Bass Pond, elevations would be lowered by approximately 6 feet, to allow replenishment of pond water at 1,500 cfs (the typical summer flowrate).
- At the East Mitigation Site elevations would be lowered 6–12 feet.
- At the West Mitigation Site, elevations would be lowered by 0–6 feet, except where the constructed channel passes through the site; in the channel, elevations would be lowered by up to 10 feet.

Approximately 226,000 cubic yards of fill material would be placed in the existing pond to create the berm and shallow side channel. The design would create 1- to 3-foot deep shoals in the channel at elevations of 1 to 3 feet below the 3,900 cfs flow water surface elevation up to the existing vegetated shoreline edges and the new berm.

Rock material would be used to protect the river connection, side channel, and berm from erosion. Designed erosion protection along the channel requires a 1.5- to 2.1-foot thick rock layer along the channel bottom along the entire width and length of the channel. The erosion protection material would consist of a cobblestone rock mix ranging between 0.5 to 4 inches in diameter. The sizing of the rock was based on discussions with USFWS and NMFS to meet salmonid spawning protection requirements.

The soil and rock fill material would come from the cut bank excavation of Site 2-3, excavated material from the Bass Pond, and excavated materials from the West and East Mitigation Sites.

Because the fill materials (silty-sandy soils and gravels) would originate on site or from elsewhere along the floodplain of the Lower American River, the physical and chemical characteristics of future substrates would be similar to existing substrates.

The proposed mitigation project is designed to avoid significant migration of newly placed fill through the use of geotextiles and the establishment of on-site vegetation. However, during the life span of the project, there would be natural erosion and migration of fill would occur, as it does under existing conditions.

Suspended Particulates/Turbidity

Constructing the proposed mitigation project would alter suspended particulate type and concentration or turbidity by:

- Placement of rock, gravel, and soil fill, which would temporarily generate increased turbidity in the immediate vicinity, and could result in a sediment plume affecting areas further downstream.
- Stormwater runoff from landside construction areas affecting turbidity.

Placement of riprap in the water could result in a sediment plume, generated from the channel bottom and levee side, becoming suspended in the water and would likely generate turbidity levels above those identified as acceptable by the Basin Plan. As rock riprap and other fill is placed in the open water, significant indirect effects could result as a turbidity plume drifts further downstream and later affects water qualify in downstream areas. To reduce these to a less-than-significant level, the construction contractor would prepare and implement a SWPPP. Also, a turbidity curtain or other comparable minimization measures approved by NMFS and the U.S. Fish and Wildlife Service (USFWS) would be installed prior to any in-water work conducted on the waterside of the levee. (See also “Actions to Minimize Effects” below.)

Coordination with the Central Valley RWQCB would occur prior to construction through the Clean Water Act Section 401 water quality certification process to ensure that any appropriate measures would be implemented to protect water quality, including from the effects of stormwater runoff. The construction contractor would prepare and implement a SWPPP and comply with the conditions of the National Pollution Discharge Elimination System (NPDES) Construction General Permit. The SWPPP would describe the construction activities to be conducted, and best management practices (BMPs) that would be implemented to contain spills and prevent discharges of stormwater into waterways. BMPs could include but are not limited to straw waddles, geotextile and coir mats, tire wash stations at ingress/egress points to prevent tracking soil offsite onto roadways and entering the municipal stormwater collection system, and sand filter bags at stormwater collection inverts. In addition, during construction at the Arden Pond Mitigation Site, water pumped from the pond would be discharged on land for natural settlement of suspended sediment and percolation of water into the ground. Potential turbidity effects from landside construction (e.g., vehicle, staging, placement of construction equipment) would be limited to stormwater runoff carrying loose soil from staging areas and construction vehicle access areas. Following construction, BMPs would continue to be monitored and implemented while vegetation matures enough to stabilize surface soil at all of the proposed mitigation

project's construction sites. Further, the Arden Pond Mitigation Site would include plantings of riparian vegetation, that could slow flows down and reduce turbidity during flood flows.

Water

Water Chemistry

The Project Area is in the Sacramento Hydrologic Basin Planning Area and Lower American Hydrologic Subarea, as designated by the Central Valley Regional Water Quality Control Board (RWQCB). Water quality standards for this basin are contained in the Water Quality Control Plan for the Sacramento River Basin and the San Joaquin River Basin (Basin Plan) per Section 303 of the Clean Water Act.

The Basin Plan objective for pH is between 6.5 and 8.5, and discharges cannot result in changes of pH that exceed 0.5. The proposed construction materials (rock and sand or silt soil) have little potential to affect the pH of the American River, and the proposed mitigation project.

The Lower American River is listed as impaired for mercury, polychlorinated biphenyls (PCBs), toxicity, bifenthrin (a pesticide), pyrethroids (pesticides) and indicator bacteria.[3] However, the proposed mitigation project would not involve use of materials containing significant amounts of PCBs, mercury, or pesticides.

Construction of the proposed mitigation project would include ground disturbance activities that could expose soils to increased rates of erosion during storm events that could increase the rate of sedimentation in receiving waters. Sediment input into the river and turbidity caused by sediment-laden runoff or placement of rock in the river could cause a turbidity plume in the water that could exceed the Basin Plan objective for turbidity in the American River (10 nephelometric turbidity units [NTUs], except during periods of storm runoff). Also use and storage of equipment could result in the accidental spills of fuel, oil, and other construction equipment related materials that could also be carried in stormwater runoff to receiving waters. As a result, there is the potential for construction activities to adversely affect receiving water chemistry.

Construction contractors would be required to prepare and implement a SWPPP and comply with the conditions of the National Pollutant Discharge Elimination System (NPDES) general stormwater permit for construction activity. The contractor would be required to obtain a permit from the Central Valley RWQCB detailing a plan to control any spills that could occur during construction. The plan would describe the construction activities to be conducted, BMPs that would be implemented to prevent discharges of contaminated stormwater into waterways, and inspection and monitoring activities that would be conducted. These avoidance and minimization measures would reduce effects on water chemistry and ensure that the proposed mitigation project would not violate State water quality standards identified in the Basin Plan or the Toxic Effluent Standards of Section 307 of the Clean Water Act.

[3] State Water Resources Control Board. 2021. *2014-2016 303(d) List of Impaired Waters*. https://www.waterboards.ca.gov/centralvalley/water_issues/tmdl/impaired_waters_list/#intrpt2014_2016. Accessed January 2021.

Clarity

Placement of fill materials would temporarily reduce clarity due to an increase in total suspended solids within the Project Area. Clarity is not expected to be substantially affected outside the immediate Project Area. However, the reduction of clarity caused by construction activities would be short in duration and would return to pre-construction levels upon project completion.

Color

The proposed mitigation project is expected to affect color only during fill activities. Placement of fill materials would temporarily induce a color change due to an increase in turbidity. These effects would be consistent with those discussed above for clarity. The change in color caused by construction activities would be short in duration and would return to pre-construction levels upon project completion.

Odor

The proposed mitigation project would not result in any major sources of odor, and would not involve operation of any of the common types of facilities that are known to produce odors in water (e.g., wastewater treatment facility). Air-borne odors associated with diesel exhaust emissions from the use of construction equipment on site may be noticeable from time to time by adjacent receptors. However, the odors would be intermittent and temporary, would dissipate rapidly from the source with an increase in distance, and are unlikely to affect water odor. Furthermore, as required by California Air Resources Board (CARB) regulation 13 CCR 2449(d)(3), no in-use off-road diesel vehicles may idle for more than 5 consecutive minutes. In addition, implementation of mitigation measures, which are required to reduce other air quality effects, would further reduce exhaust emissions and provide advanced notification of construction activity.

Taste

The proposed materials and construction activities are not expected to affect taste.

Dissolved gases

The proposed materials and construction activities are not expected to directly affect dissolved gases. However, to the extent that the proposed mitigation project results in a temporary increase in water temperature at the project sites, the concentration of dissolved gases would be reduced. The potential effects on water temperature are described in the following section.

Temperature

The proposed mitigation project's construction activities have the potential to affect water temperatures by creating substantial turbidity and by removing trees along the lower waterside slope. The project includes measures to control turbidity, in particular the preparation and implementation of a SWPPP, installation of a turbidity curtain and/or other control measures approved by the National Marine Fisheries Service (NMFS), and so the effect of turbidity on water temperature would be minimized. Also, the design includes planting riparian trees and shrubs at the East and West Mitigation sites, and along the shallow side channel, that in the long term would provide shade and result in a beneficial effect on water temperatures. Nonetheless, in the short term the proposed mitigation project could impact (increase) water temperatures until vegetation at the Arden Pond Mitigation Site develops.

Nutrients

The proposed mitigation project's construction activities have the potential to affect nutrient levels during construction and in the long term. Release of suspended sediments during construction could potentially cause thresholds for nutrients to be exceeded. However, the construction contractor would implement a SWPPP including BMPs that would prevent release of excess nutrients during construction. Long-term nutrient levels would not be substantially altered by the proposed mitigation project. Its design includes planting benches and restored riparian areas along a created shallow water channel in which trees and shrubs would be planted and at maturity would provide nutrient inputs comparable to the existing shaded riverine aquatic corridor. In addition, nutrients from the upstream watershed would remain in the system.

Eutrophication

The proposed mitigation project is not expected to contribute excess nutrients into the stream or promote excessive plant growth during construction or in the long-term. Also, a SWPPP would be prepared and implemented with BMPs that would prevent release of excessive nutrients during construction. Post-construction, surfaces would be revegetated, which would limit nutrient inputs (e.g., from overland flow).

Water Circulation and Fluctuations, and Salinity Gradients

At the Arden Mitigation Site, the conversion of a portion of Arden Pond to the shallow side channel and riparian habitat would alter water circulation. Although water would still circulate similarly through the remaining portion of Arden Pond, which would become the Bass Pond, the created shallow channel would be connected to the American River and portions of the East and West Mitigation lowered below the OHWM would be regularly inundated by the American River. Over a wide range of discharge, a greater volume of flow would pass through the shallow side channel.

The proposed mitigation project would be along a freshwater river and would not measurably alter the magnitude of freshwater inflows to brackish waters downstream in the delta. Thus, it would not affect salinity patterns.

3.2.2 Potential Impacts on Biological Characteristics of the Aquatic Ecosystem

The proposed mitigation project would result in minor to moderate temporary impacts to the biological characteristics of the aquatic ecosystem of the Lower American River. It has incorporated measures from the GRR EIS/EIR that would minimize these effects. The proposed mitigation project would result in permanent beneficial effects to the biological characteristics of the aquatic ecosystem of the Lower American River, particularly by increasing the area of forested wetland and other riparian, and SRA habitats, and by increasing habitat connectivity.

Fish, Crustaceans, Mollusks, and Other Aquatic Organisms in the Food Web

Plankton

Plankton are drifting plant and animal organisms that inhabit the pelagic zone of oceans, seas, or bodies of fresh water, including the Lower American River at the project sites. Because project

construction activities would affect turbidity, incident radiation, water temperature, and inputs of organic matter from bank vegetation at the project sites, the proposed mitigation project would affect plankton as they passed through this area in the flowing water of the Lower American River.

At Arden Pond Mitigation Site, the proposed mitigation project would cause temporary effects on plankton. In the American River, because effects on turbidity, water temperature, and incident radiation would be local, temporary, and minimized to less-than-significant levels, and because most plankton would only be transiently present at the site, effects on plankton abundance and species composition of the Lower American River would not be substantial. The proposed mitigation project would also have a minor permanent effect on plankton: use by plankton of the portion of Arden Pond converted to a constructed channel would be permanently altered. This channel would have greater connectivity to the American River than the existing Arden Pond, and as a result plankton moving through the side channel would be more similar in abundance and species composition to plankton of the American River than to plankton of the existing Arden Pond or the proposed Bass Pond.

Benthos

At the Project Site, the American River and Arden Pond have a sandy/silty bottom and natural banks, which have benthic macroinvertebrates. Disturbance during construction will cause temporary impacts to benthic organisms. But following construction, where surfaces have a sandy/silty substrate, benthic organisms would recolonize the area. In the constructed channel, where some constructed surfaces would have a rock substrate, native benthic organisms also would be expected to colonize.

Nekton

Nekton are actively swimming aquatic organisms that range in size and complexity from plankton to marine mammals. Native fish present in the Project Area can be separated into anadromous species and resident species. Native anadromous species include Central Valley spring-run Chinook salmon, Sacramento River winter-run Chinook salmon, fall/late-fall run Chinook salmon, and California Central Valley steelhead trout.

Rock placement during construction would most likely disturb the native resident fish by increasing vibration, water turbulence, and turbidity, which could affect fish physiology, behavior, and habitat. The proposed mitigation project would temporarily eliminate the bankside vegetation that is an element of SRA habitat. The proposed mitigation project includes the installation of instream woody material and creation of additional SRA habitat that would have a beneficial effect on anadromous fish once the trees and shrubs mature. The proposed mitigation project would also create additional shallow water habitat at the Arden Pond Mitigation Site that would benefit anadromous fish of the American River.

The direct and indirect effects resulting from the proposed mitigation project would not substantially worsen existing conditions temporarily, and would not result in a substantial temporary reduction in population abundance, movement, and distribution. In the long-term, the direct and indirect effects resulting from the proposed mitigation project would improve conditions and could contribute to an increase in population abundance, movement, and distribution.

Aquatic Food Web

Effects on the plankton, benthic, and nekton communities can affect the broader the aquatic food web, which includes marine mammals that feed on Chinook salmon and steelhead that spawn and rear in the Lower American River before migrating to the Pacific Ocean. However, the proposed mitigation project's adverse effects on the aquatic food web, or the plankton, benthic, and nekton communities, and thus the aquatic food web would be temporary, as described in the preceding sections. The proposed mitigation project's long-term effects would be beneficial because of the increase in SRA, forested wetland, and riparian habitats along the Lower American River, which would beneficially affect physical conditions and resource availability.

Threatened and Endangered Species

Two species federally listed as threatened are known to be present in the Project Area, and thus would be affected by the proposed mitigation project: Valley elderberry longhorn beetle (VELB) and California Central Valley steelhead. Three other federally listed species are likely to occur in the Project Area: western yellow-billed cuckoo (threatened), Sacramento River winter-run Chinook salmon (endangered), and Central Valley spring-run Chinook salmon (threatened). The Project Area is not within designated critical habitat for any listed terrestrial wildlife species, but is within designated critical habitat for Central Valley spring-run Chinook and California Central Valley steelhead. Construction of the proposed mitigation project would have temporary impacts and long-term benefits to the habitat for these federally listed species.

Construction of the proposed mitigation project would directly affect 8.39 acres of riparian vegetation that is habitat for VELB. Elderberry shrubs in this riparian vegetation would be transplanted to the Rio Americano West, Rio Americano East, Rossmoor East or West Mitigation Sites, or other elderberry shrub mitigation sites along the Lower American River. The proposed mitigation project would create 33.2 acres of riparian vegetation at the project site, resulting in a long-term gain of 24.81 acres of suitable habitat for VELB.

The project site is unlikely to support nesting western yellow-billed cuckoos because nesting cuckoos have not been documented in along the Lower American River, and riparian vegetation in the Project Area is narrow with a high level of human disturbance. Nonetheless, pre-construction surveys would be conducted for the species. If nesting birds are detected, worker environmental awareness training would be conducted and avoidance buffers would be established. Riparian habitat within the Project Area also could support foraging cuckoos. Construction of the Arden Pond Mitigation Site would result in the temporary loss of 8.39 acres of riparian habitat, and subsequently create 33.2 acres of riparian habitat on site, resulting in a 24.81-acre increase in riparian habitat and increased habitat connectivity.

Construction of the proposed mitigation project would cause the temporary loss of 4.85 acres of SRA habitat provided by forested wetlands, but would restore or create 30.65 acres of SRA habitat once planted trees and shrubs mature, and thus, in the long-term, would improve habitat conditions for California Central Valley steelhead, Sacramento River winter-run Chinook salmon, and Central Valley spring-run Chinook salmon. However, in the short term, while trees and shrubs are maturing, there would be an Also, the shallow side channel could potentially provide spawning habitat.

Other Wildlife

The project site is used by a variety of species associated with annual grassland, mixed oak woodland, upland and riparian scrubs, riparian woodland, non-native woodland, and riverine habitats. Effects on fish species using riverine habitat at the project site are discussed in the preceding section regarding effects on the nekton. Grading and other ground-disturbing activities, noise from construction activities, and removal of vegetation could disrupt movement and foraging, or displace, injure, or kill wildlife. However, these effects would be temporary and many affected species would be expected to return to areas affected by construction once such work is completed. Additionally, there would be extensive similar, unaffected, areas of riparian, oak woodland, and grassland habitat in the vicinity of the project site and along the Lower American River that could be used by these species. Therefore, for most species of terrestrial wildlife, the proposed mitigation project would not result in a substantial reduction in population abundance, movement, and distribution. However, in addition to the species federally listed as threatened or endangered that were discussed previously, a number of special-status species likely use the project site. These species are less abundant, have more limited distributions, and are more vulnerable to population-level effects than common wildlife species. These special-status species include western pond turtle, American badger, pallid bat and western red bat, and several raptors and other birds that may nest at or in the vicinity of the project site (Swainson's hawk, Cooper's hawk, white-tailed kite, burrowing owl, great egret, great blue heron, and purple martin).

To minimize potential effects on these special-status species, the applicable avoidance and minimization measures from the GRR EIS/EIR have been incorporated into the proposed mitigation project, with revisions to reflect the revised Project Area and current mitigation requirements. These measures include worker environmental awareness training; pre-construction surveys for western pond turtles, bat maternity roosts, American badger dens, and nesting birds; and establishment of avoidance buffers as necessary. Implementing these measures would protect maternity roosts of special-status bats, and avoid or minimize effects on western pond turtle, American badger, and nesting birds.

Furthermore, on-site replacement of riparian habitat and restoration of riparian habitat off site as compensatory mitigation would provide replacement habitat at a 2:1 ratio, which in the long-term would improve habitat conditions for riparian-associated species.

Cumulative Effects on the Aquatic Ecosystem

Effects of the proposed mitigation project include temporary reductions in SRA aquatic and forested wetland and other riparian habitats that are used by aquatic and terrestrial species, and permanent conversion of open water to forested wetland. It also converts a portion of Arden Pond to a side channel of the American River locally altering water circulation to provide additional shallow water aquatic habitat.

Ongoing non-federal activities that effect the aquatic ecosystem, including listed salmonids and valley elderberry longhorn beetle, and their habitat, will likely continue in the short-term, at intensities similar to those of recent years. However, some activities associated with the State's proposed Central Valley Flood Protection Plan or state or local efforts to implement the Engineering Pamphlet (EP) 1110-2-18 could result in increased effects on listed species. Potential

cumulative effects on fish also may include any continuing or future non-federal diversions of water that may entrain adult or larval fish or that may incrementally decrease outflows or water quality, thus changing habitat for these species.

Other ongoing non-federal activities potentially contributing to cumulative effects on the aquatic ecosystem include: wave action in the water channel caused by boats that may degrade riparian and wetland habitat and erode banks; dumping of domestic and industrial garbage; land uses that result in increased discharges of pesticides, herbicides, oil, and other contaminants; and conversion of riparian areas for urban development. In addition, routine vegetation clearing and mowing associated with agricultural practices may affect or remove habitat for the valley elderberry longhorn beetle.

3.2.3 Potential Impacts on Special Aquatic Sites

Within the Project Area, there are no sanctuaries and refuges, mud flats, vegetated shallows, coral reefs, or riffle and pool complexes.

However, wetlands are present at the project site and would be affected by the proposed mitigation project. During development of the detailed design of the proposed mitigation project, reasonable efforts were taken to avoid disturbance of these existing wetlands and to implement environmentally sustainable designs. Nonetheless, at the Arden Pond Mitigation Site, a total of 4.89 acres of wetland (4.85 acres of forested wetland and 0.04 acres of emergent wetland) would be temporarily impacted. Temporarily impacted wetlands would be restored and additional wetland would be created where the open water of the existing gravel mining pit (Arden Pond) is filled above the typical elevation of the summer water surface. The project would result in 30.65 acres of forested wetland, a net increase of 25.76 acres of wetland at the project site. The wetlands to be restored and created by the proposed mitigation project are being designed in coordination with NMFS and USFWS as part of the consultation under the Endangered Species Act.

3.2.4 Potential Effects on Human Use Characteristics of the Aquatic Ecosystem

The proposed mitigation project would not affect municipal private water supplies but would temporarily affect recreational and commercial fisheries, water-related recreation, aesthetics, and parks. (Construction of the proposed mitigation project would last for approximately 1.5 years.) It incorporates, with clarifying modifications, mitigation measures in the GRR EIS/EIR that would minimize these effects. The proposed mitigation project would beneficially affect recreational and commercial fisheries (in particular by increasing the amount of SRA habitat) and would have only minor or no effects on other human uses.

Municipal and Private Water Supplies

The proposed mitigation project would not affect municipal or private water supplies.

The proposed mitigation project's fill material would not violate Environmental Protection Agency or State water quality standards or violate the primary drinking water standards of the Safe Drinking Water Act (42 USC 300f-300j). Also, the proposed mitigation project's design,

compliance with State water quality thresholds and standard construction and erosion practices would preclude the introduction of substances into surrounding waters, and materials removed for disposal off site would be disposed of in an appropriate landfill or other upland area.

Recreational and Commercial Fisheries, and Water-Related Recreation

The proposed mitigation project would temporarily affect water-related recreation and recreational and commercial fisheries, but would provide long-term benefits to fisheries. These effects are described further below.

The proposed mitigation project would cause temporary closure of recreation facilities in the American River Parkway during construction. Also, recreational access to the river bank at Arden Pond would be completely restricted during the construction period because of the construction activities and associated potential hazards to recreationists, including those fishing, swimming, and boating.

Construction of the Arden Pond Mitigation Site would result in temporary closure of the existing pond and trails immediately adjacent, eliminating fishing and other activities for those areas of the William B. Pond Recreation Area within the construction footprint. Construction at the Arden Pond Mitigation Site would include modification of the existing pond to construct an isolated Bass Pond separated by a berm from the remainder of the pond, which would be converted to a shallow side channel of the American River. Although the Arden Pond Mitigation Site would result in a permanent reduction in pond size, the increase in depth of the Bass Pond would also be increased and that would provide improved habitat for bass, which could benefit recreational fishing conditions. Access to an Americans with Disabilities Act (ADA) compliant ramp would be restricted during construction, but would be restored once construction is complete. Haul routes would interrupt access to portions of the Jedediah Smith Memorial Trail and the River Access Trail. A horse trail that runs along the northern edge of the mitigation site would be realigned for haul route purposes.

Also, access along all the open available recreational trails would be impaired at locations where construction equipment would cross from landside staging areas to construction sites or would be hauling in materials from off site to the staging areas.

To minimize these effects on recreation, the proposed mitigation project incorporates, with clarifying modifications, the related mitigation measure in the GRR EIS/EIR This measure includes notification and coordination with user groups, posting signage, use of flaggers and traffic control, provision of marked detours, posting alternative access points if any access points are closed, and restoring access and repairing any damage to recreational facilities to pre-project conditions.

The proposed mitigation project would impact habitat for commercial fish species by causing temporary increases in turbidity and short-term loss of the elements of SRA habitat. The proposed mitigation project would incorporate riparian plantings along the created shallow water channel, on the berms and at East and West mitigation sites that in the long-term would improve SRA habitat conditions. As described previously under “Suspended Particulates/ Turbidity,” increases in turbidity would be minimized through implementation of a SWPPP and

associated BMPs, and installation, prior to in-water work, of a turbidity curtain or other comparable minimization measure.

Aesthetics

The proposed mitigation project would result in vegetation loss and construction activities that would temporarily disrupt the existing visual conditions in the Parkway. Trees would be planted after construction is completed at the Arden Pond Mitigation Site, and disturbed areas would be reseeded with native grasses. However, there would still be a temporal loss of vegetation. In addition, the proposed mitigation project incorporates an GRR EIS/EIR mitigation measure that would also plant additional trees at other areas in the Parkway according to the Parkway Plan to mitigate for the removal of the trees.

Parks, National and Historical Monuments, National Seashores, Wilderness Areas, Research Sites, and Similar Preserves

Construction of the proposed mitigation project would last for approximately 1.5 years. During that time, it would affect the American River Parkway, and within the parkway, it would affect the Jedediah Smith Memorial Trail and William B. Pond Recreation Area. The proposed mitigation project would not preclude future access to these recreational areas.

The proposed mitigation project incorporates, with clarifying modifications, the mitigation measure in the GRR EIS/EIR that would minimize potential effects to recreational users. This measure includes notification and coordination with user groups, posting signage, use of flaggers and traffic control, provision of marked detours, posting alternative access points if any access points are closed, and restoring access and repairing any damage to recreational facilities to pre-project conditions.

3.2.5 Potential Effects of Contaminants—Evaluation and Testing of Fill Material

Fill material would come from within the American River Parkway. Sources of cobble would come from old tailing piles further upstream at Sailor Bar where the Sacramento Water Forum has screened cobbled and stockpiled in locations that are currently in use as sources for a variety of restoration projects in the American River. Soil would come from on-site soil excavated from the Bass Pond and the West and East Mitigation Sites, and off-site soil excavated from ARCF erosion protection Sites 2-2 and 2-3. The five hazardous waste/materials sites identified in the study area of the GRR are not at these sites, and there are no records for these sites in the Department of Toxic Substances Control Envirostor database and State Water Resources Control Board Geotracker.[4,5] However, contaminants could be present at one or more of these three sites. Therefore, testing of borrow sites would occur prior to the use of material, and sites that have contaminated soils would not be used for this project.

---

4 Department of Toxic Substances Control, 2019. Available: https://www.envirostor.dtsc.ca.gov/public/map/?global_id=CAT080031115. Accessed November 21, 2019 and December 13, 2019.

5 State Water Resources Control Board. 2019. Geotracker Available: https://geotracker.waterboards.ca.gov/map/?CMD=runreport&myaddress=sacramento. Accessed November 21, 2019 and December 13, 2019.

Because the discharge and extraction sites are all on the floodplain of the Lower American River in the American River Parkway, and thus subject to the same sources of contaminants and composed of substantially similar materials, and materials from extraction sites would be tested and not used if contaminated, no adverse impacts to water quality would result from contaminants in fill material used by the project.

3.3 Actions to Minimize Adverse Effects

3.3.1 Actions to Minimize Adverse Effects to the Physical and Chemical Characteristics of the Aquatic Ecosystem

Constructing the proposed mitigation project could cause adverse effects to the physical and chemical characteristics of the aquatic ecosystem. These effects include a potential temporary increase in turbidity during bank protection construction, runoff of exposed soils, and cement, slurry, or fuel spills during construction. Emissions from construction equipment, haul trucks, and barges also pose a potential impact to environmental quality and value during the duration of construction activities.

The proposed mitigation project includes actions to reduce these adverse effects, including actions concerning the location of the discharge, the material discharged and its subsequent dispersion, and actions related to technology. The site would be designed to be as consistent as feasible with natural riverbanks and channels through the placement of gravels and cobbles (at the lowest elevations and to protect against excessive erosion), installation of IWM, and the planting of riparian vegetation. BMPs and measures incorporated from the GRR EIS/EIR, with clarifying modifications, would be implemented during construction. These BMPs and measures include:

- Implementing Sacramento Metropolitan Air Quality Management District's (SMAQMD's) Basic Construction Emission Control Practices and other BMPs to control fugitive dust, runoff, and emissions.
- Implementing enhanced fugitive dust control practices and enhanced on-site exhaust controls in addition to SMAQMD's Basic Construction Emission Control Practices and other BMPs
- Implementing a Storm Water Pollution Prevention Plan (SWPPP), Spill Prevention Control and Countermeasures Plan, and associated BMPs.
- Conducting earthwork during low flow periods (generally May 1 through November 30).
- Staging construction equipment and materials on the landside of the subject levee reaches in areas that have already been disturbed, to the extent possible.
- Controlling dust by reducing speed limits to 10 miles per hour, regularly watering roads, and wetting down soil before removal and during placement.
- Minimizing ground and vegetation disturbance during project construction by establishing designated equipment staging areas, ingress and egress corridors, spoils disposal and soil stockpile areas, and equipment exclusion zones prior to the commencement of any grading operations.

- Testing of borrow sites prior to the use of material and not using sites that have contaminated soils.
- Removing any hazardous substance encountered during construction and properly disposing of the substance by a licensed contractor in accordance with Federal, State, and local regulations.
- Stockpiling soil on the landside of the levee reaches, and install sediment barriers (e.g., silt fences, fiber rolls, and straw bales) around the base of stockpiles to intercept runoff and sediment during storm events. If necessary, cover stockpiles with geotextile fabric to provide further protection against wind and water erosion.
- Installing sediment barriers on graded or otherwise disturbed slopes as needed to prevent sediment from leaving the project site and entering nearby surface waters.
- Installing plant materials to stabilize cut and fill slopes and other disturbed areas once construction is complete. Plant materials could include an erosion control seed mixture or shrub and tree container stock. Temporary structural BMPs, such as sediment barriers, erosion control blankets, mulch, and mulch tackifier, would be installed as needed to stabilize disturbed areas until vegetation becomes established.
- Conducting water quality tests specifically for increases in turbidity and sedimentation caused by construction activities.

3.3.2 Actions to Minimize Adverse Effects to the Biological Characteristics of the Aquatic Ecosystem

Constructing the proposed mitigation project could cause adverse effects to plant and animal populations, and thus to ecological communities and ecosystem functioning. Habitat would be disturbed or temporarily removed, and animals could be displaced, injured, or killed. The proposed mitigation project includes actions to reduce these adverse effects. BMPs and measures incorporated from the GRR EIS/EIR, with clarifying modifications, would be implemented during construction. These BMPs and measures include:

- Timing construction activities to avoid the bird nesting, bat pupping, and VELB flight seasons, where feasible; and timing in-water work to avoid impacts to listed fish species.
- Training construction personnel about the life history of threatened and endangered species, and other relevant species, the importance of their habitat, and required measures to minimize impacts to these species and their habitats.
- Conducting pre-construction surveys for western pond turtles, bat maternity roosts, American badger dens, and nesting birds.
- Establishing and fencing or flagging avoidance buffers around habitats to be avoided (including retained elderberry shrubs)
- Transplanting elderberry shrubs that cannot be avoided.
- Rescuing fish stranded by dewatering during construction.
- Monitoring by a qualified biologist of initial groundbreaking activities, vegetation removal and transplanting of shrubs, and installation of protective fencing.

3.3.3 Actions to Minimize Adverse Effects to Human Use Characteristics of the Aquatic Ecosystem

Constructing the proposed mitigation project could cause adverse effects to recreational and commercial fisheries, water-related recreation, aesthetics, and parks. plant and animal populations. It would result in temporary closure of the existing pond and trails immediately adjacent, eliminating fishing and other activities for those areas of the William B. Pond Recreation Area within the construction footprint. The proposed mitigation project includes actions to reduce these adverse effects. BMPs and measures incorporated from the GRR EIS/EIR, with clarifying modifications, would be implemented during construction. These BMPs and measures include:

- Coordinating with recreation user groups prior to and during construction.
- Giving advance notice to recreation users via signage informing them of anticipated activities, detours, and alternate access points to reduce the effects.
- Posting signs at major entry points for the American River Parkway and William B. Pond Recreation Area clearly indicating closures and estimated duration of closures. Information signs would notify the public of alternate access points, alternate parks and recreation sites, and provide a contact number to call for questions or concerns.
- Providing flaggers, posting warning signs and signs, and fencing the project area to restrict access before and during construction to ensure public safety.
- Providing marked detours for all bike trails that would be temporarily closed during construction, and traffic control where recreational traffic would intersect with construction vehicles.
- Repairing any construction-related damage to recreational facilities to pre-project conditions.

4.0 Factual determinations of Potential Impacts

4.1 Physical Substrate

To convert a portion of Arden Pond to a shallow side channel of the Lower American River and to forested wetland and other riparian habitat, the proposed mitigation project would permanently raise and raise and lower elevations of wetlands and other waters of the U.S. as described in Section 3.2.1, “Potential Impacts on the Physical and Chemical Characteristics of the Aquatic Ecosystem,” and approximately 226,000 cubic yards of fill material would be placed in the existing pond. This soil and rock fill material would come from on-site, the cut bank excavation of Site 2-3. The long-term effects of the proposed mitigation project on the physical substrate would be minor because the fill materials (silty-sandy soils and gravels) would originate on site or from elsewhere along the floodplain of the Lower American River, their physical and chemical characteristics would be similar to existing substrates.

The proposed mitigation project is designed to avoid significant migration of newly placed fill through the use of geotextiles and the establishment of on-site vegetation. However, during the

life span of the project, there would be natural erosion and migration of the post-project substrate would occur, as it does under existing conditions.

4.2 Water Circulation, Fluctuations, and Salinity Gradients

At the Arden Mitigation Site, the conversion of a portion of Arden Pond to the shallow side channel and riparian habitat would alter water circulation. Although water would still circulate similarly through the remaining portion of Arden Pond, which would become the Bass Pond, the created shallow channel would be connected to the American River and portions of the East and West Mitigation lowered below the OHWM would be regularly inundated by the American River. Over a wide range of discharge, a greater volume of flow would pass through the shallow side channel.

The proposed mitigation project would be along a freshwater river and would not measurably alter the magnitude of freshwater inflows to brackish waters downstream in the delta. Thus, it would not affect salinity patterns.

4.3 Suspended Particulates/Turbidity

As described in Section 3.2.1, "Potential Impacts on Physical and Chemical Characteristics of the Aquatic Ecosystem," constructing the proposed mitigation project would alter suspended particulate type and concentration or turbidity by:

- Placement of rock, gravel, and soil fill, which would temporarily generate increased turbidity in the immediate vicinity, and could result in a sediment plume affecting areas further downstream.
- Stormwater runoff from landside construction areas affecting turbidity.

As described in Section 3.3.1, "Actions Taken to Minimize Adverse Effects to the Physical and Chemical Characteristics of the Aquatic Ecosystem," BMPs and measures incorporated from the GRR EIS/EIR, with clarifying modifications, would be implemented during construction. Consequently, the proposed mitigation project would have only minor effects on suspended particulates and turbidity.

4.4 Contaminants

Because the discharge and extraction sites are all on the floodplain of the Lower American River in the American River Parkway, and thus subject to the same sources of contaminants and composed of substantially similar materials, and materials from extraction sites would be tested and not used if contaminated, no adverse impacts to water quality would result from contaminants in fill material used by the project. See Section 3.2.5, "Potential Effects of Contaminants—Evaluation and Testing of Fill material," for additional discussion of the potential effects of contaminants.

4.5 Aquatic Ecosystem and Organisms

The proposed mitigation project would result in minor to moderate temporary impacts to the biological characteristics of the aquatic ecosystem of the Lower American River. It has incorporated measures from the GRR EIS/EIR that would minimize these effects. The proposed mitigation project would result in permanent beneficial effects to the biological characteristics of the aquatic ecosystem of the Lower American River, particularly by increasing the area of forested wetland and other riparian, and SRA habitats, and by increasing habitat connectivity. Section 3.2.2, "Potential Impacts on Biological Characteristics of the Aquatic Ecosystem," provides a detailed evaluation of the proposed mitigation project's potential effects on the aquatic ecosystem.

4.6 Cumulative Effects on the Aquatic Ecosystem

Effects of the proposed mitigation project include temporary reductions in riparian and SRA habitats that are used by aquatic and terrestrial species, and permanent conversion of upland and open water to forested wetland. It also converts a portion of Arden Pond to a side channel of the American River locally altering water circulation to provide additional shallow water aquatic habitat and reduce the predation of salmonids by warm-water fish.

Because it would increase the amount and connectivity of riparian, wetland and SRA habitat, along the Lower American River and reduce predation of salmonids, the proposed mitigation project would result in a beneficial contribution to cumulative effects on the aquatic ecosystem of the Lower American River. See Section 3.2.2, "Potential Impacts on the Biological Characteristics of the Aquatic Ecosystem," for additional discussion of cumulative effects on the aquatic ecosystem.

4.7 Secondary Effects on the Aquatic Ecosystem

Secondary effects could result from the unintentional placement of soil material or dispersion of material outside of the proposed project area during the placement of fill, grading, and revegetation at the project site. This could result in additional adverse effects to water quality, erosion and accretion patterns, aquatic and other wildlife habitat, or air quality. Construction equipment could potentially release contaminants (such as petroleum products) that could migrate into the channel. Such secondary effects would be avoided and minimized through the use of the BMPs and measures described in Section 3.3, "Actions to Minimize Adverse Effects." Consequently, secondary effects would be minor.

5.0 Findings of Compliance or Non-Compliance with the Restrictions on Discharges

5.1 Adaptation of the Section 404(b)(1) Guidelines to this Evaluation

No significant adaptations of the guidelines were made relative to this evaluation.

5.2 Availability of a Practicable Alternative less Damaging to the Environment

Alternatives to the proposed mitigation project are described and evaluated in Section 2.0, "Alternatives." Based on the evaluation in that section, there is no practicable alternative to the proposed discharge that would be less damaging to the environment.

5.3 Compliance with Applicable Water Quality and Toxic Effluent Standards

Construction of the proposed mitigation project would not cause or contribute to violation of any applicable State water quality standards. The discharge operations would not violate the Toxic Effluent Standards of Section 307 of the Clean Water Act.

5.4 Compliance with Endangered Species Act

The placement of fill materials by the proposed mitigation project would not jeopardize the continued existence of any species listed as threatened or endangered or result in the likelihood of destruction or adverse modification of any critical habitat as specified by the Endangered Species Act of 1973.

5.5 Compliance with Marine Protection, Research, and Sanctuaries Act

Compliance with the Marine Protection, Research, and Sanctuaries Act is not relevant to the proposed mitigation project because it is along a freshwater river with no potential to affect marine sanctuaries.

5.6 Extent of Degradation of Waters of the U.S.

Construction of the proposed mitigation project would not cause or contribute to significant degradation of waters of the U.S. Approximately 4.89 acres of wetlands and 32.89 acres of other waters of the U.S. would be temporarily disturbed. Of waters of the U.S., the project would result in the permanent reduction in the extent of open water, non-native grassland, unvegetated areas, and emergent wetland by 20.69 acres, and a permanent increase in the extent of wetlands by 25.8 acres, for a net increase in the extent of waters of the U.S. Overall, the proposed mitigation project would have beneficial long-term effects on the aquatic ecosystem's diversity and productivity resulting from the increase in wetland area and associated increases in SRA habitat, other habitat values, and increases in habitat connectivity. Also, the project would reduce predation on juvenile salmonids by isolating the predator habitat of the created side channel from the Bass Pond. Long-term effects to human uses would be minor and not significant.

5.7 Appropriate and Practicable Steps Taken to Minimize Potential Impacts to the Aquatic Ecosystem

Appropriate steps to minimize potential adverse effects of the discharge on aquatic systems would be implemented, as described in Section 3.3, "Actions to Minimize Adverse Effects." Steps to be taken include best management practices and all applicable measures incorporated from the GRR EIS/EIR. Consequently, the proposed mitigation project is compliant with the requirements of the guidelines for the inclusion of appropriate and practicable measures to minimize adverse effects to the aquatic ecosystem.

Comments and Responses on the Draft Supplemental Environmental Impact Statement/ Environmental Impact Report

Letter A1

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IX
75 Hawthorne Street
San Francisco, CA 94105-3901

July 19, 2021

Joe Griffen, Chief
Environmental Planning Branch
U.S. Army Corps of Engineers
1325 J Street
Sacramento, California 95814

Subject: American River Common Features Project, American River Erosion Protection and Arden Pond Mitigation Components, Contract 2, Supplemental Draft Environmental Impact Statement, Sacramento County, California (EIS No. 20210063)

Dear Joe Griffen:

The U.S. Environmental Protection Agency has reviewed the above-referenced document pursuant to the National Environmental Policy Act, Council on Environmental Quality regulations (40 CFR Part 1500-1508), and our NEPA review authority under Section 309 of the Clean Air Act.

This Draft Supplemental Environmental Impact Statement further details project activities under the *American River Common Features General Reevaluation Report Final EIS/Final EIR* Tentatively Selected Plan Alternative 2 -Sacramento Bypass and Improve Levees. Alternative 2 was selected as the least environmentally damaging alternative as it was expected to result in less riparian habitat removal while meeting the project's purpose and need. The specifics of Contract 2 addressed in this supplemental report include the 1) installation of 7,800 feet of rock tie-back and/or launchable rock trenches along two levee segments (at sites 2-2 and 2-3) interspersed with on-site planting benches, and 2) the creation of three off-site riparian habitat restoration sites at Arden Pond and the Rossmore Bar upstream of project activities. A1-1

The EPA commends the Corps' commitment to provide compensatory off-site mitigation at the Arden Pond and Rossmore mitigation sites. These areas are designed to partially off-set significant and unavoidable effects of many bank and levee protection activities by adhering to various mitigation ratios, timing limitations, and avoidance measures; however, because the potential effects of this action are being re-evaluated based on updated designs (p. 2-7), we provide the following recommendations for the Final SEIS.

Biological Resources

The Draft SEIS discusses requirements from the 2015 Biological Opinions from the National Marine Fisheries Service and US Fish and Wildlife Service and mentions that consultation was reinitiated in 2020 (p. 3-45). The Draft SEIS references the updated Biological Opinions from 2021 and presents some of the new minimization and mitigation measures to ensure that the designs contemplated by the proposed actions will not jeopardize the continued existence of species or adversely modify critical habitat (e.g. MM FISH-3, p. 3-48, MM BATS-1 p. 3-100). The effectiveness of some on- and off-site mitigation and extent of maintenance efforts needed to offset impacts from project activities is unclear, however, and may require additional consultation (pgs. 2-25, 3-76). A1-2

Recommendation: The EPA recommends that the Corps continue to work with USFWS and NMFS to ensure that all mitigation, monitoring and maintenance measures contained in the BOs are referenced, analyzed, and appended to the Final SEIS and all future actions proposed under American River Watershed Common Features 2016 authorizations, as appropriate. A1-2 (cont.)

Habitat Mitigation, Monitoring and Adaptive Management

The EPA understands that the proposed launchable rock trenches have not been used before for bank or levee protection on the Sacramento or American Rivers and there is some uncertainty as to the ability of the planting benches to provide riparian and fish habitat mitigation over the 50-year anticipated life span of the project due to normal bank erosion and the potential scouring from flood events.[1] The concern is that, once launched, exposed rip-rap rock will permanently reduce riparian vegetation and native habitat function and reduce fish habitat and food availability throughout the entirety of the action area (See e.g., NMFS BO p. 79). In the Biological Opinions, both NMFS and the USFWS are requesting that the Corps provide more information on these launchable flood protection features and on the durability of the mitigation and propose appropriate mitigation plans by the end of 2021 (NMFS BO p. 108 ; USFWS BO p. 26). A1-3

The Draft SEIS references the Habitat Mitigation Monitoring and Adaptive Management Plan (HMMAMP) that appears to be conceptual and does not detail the specific strategies needed to achieve all project conservation elements, monitoring plans or full compensation for project impacts (pgs. 3-41, 3-97). A1-4

Recommendations: The EPA recommends that the long-term ability of on-site planting bench mitigation to off-set the impacts of the project be further evaluated in the Final SEIS and include: A1-5

- A discussion of the extent of scour or erosion at various low- and high-water levels to which these on-site mitigation benches may be subject and the level of damage, from minor to catastrophic, that would trigger an elevated maintenance or remedial response.
- A detailed HMMAMP, prepared in consultation with NMFS and the USFWS, that ensures conservation measures and compensatory mitigation adequately off-set lost functions and values.
- Specific success criteria for each major aspect of the mitigation, including hydrological success, establishment of appropriate vegetation, and habitat establishment.
- Monitoring schedules and reporting plans which list performance standards and triggers for additional consultation.
- Updates to the Corps' Operations and Maintenance manual that describe short- and long-term planned maintenance activities, e.g. inspection of irrigation systems, erosion control efforts, invasive species management, remedial or replacement actions, etc. Consider identifying the parties responsible for long-term operations and maintenance and long-term funding and protection mechanisms.
- Adjustments to avoidance and buffering requirements and mitigation ratios if resource conflicts or uncertainties persist, or success criteria are not met.
- Alternatively, identify and acquire additional mitigation sites within the American River watershed that will fully off-set the functions and values lost by proposed project activities.

Wetlands

The Draft SEIS states that there are no wetlands located within the footprint of the proposed action (p. 5-7) but then refers repeatedly to 'forested wetlands' that provide shaded riverine habitat that would be A1-6

[1] Personal communications between EPA staff and Guy Romine of the Army Corps of Engineers and Allison Bosworth of the National Marine Fisheries Service, July 2021

affected by project activities (pgs. 3-32, 3-40). It is not clear whether the forested wetlands referred to in this Draft SEIS share the same characteristics as other wetlands (p. 11 of the Aquatic Resources Delineation Report – Appendix C) or are a type of seasonally-flooded riparian habitat with a distinct vegetative composition in this context. Please define or differentiate wetland types, as applicable. A1-6 (cont.)

The EPA appreciates the opportunity to review this Draft SEIS. When the Final SEIS is released, please forward an electronic copy to Robin Truitt, the lead reviewer for this project, at Truitt.Robin@epa.gov. If you have any questions, please contact me at (415) 947-4167, or Robin at (415) 972-3742. A1-7

Subject: Draft Supplemental Environmental Impact Statement/Report (Draft SEIS/EIR) for American River Watershed Common Features, Water Resources Development Act of 2016 Project, American River Contract 2, Sacramento County

To Whom It May Concern:

The California State Lands Commission (Commission) staff has reviewed the subject Draft SEIS/EIR for the American River Watershed Common Features, Water Resources Development Act of 2016 Project, American River Contract 2 Project (Project), which is being prepared by the Central Valley Flood Protection Board (CVFPB), as the lead agency under the California Environmental Quality Act (CEQA) (Pub. Resources Code, § 21000 et seq.), and the U.S. Army Corps of Engineers (Corps) as the lead agency under the National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.). The Commission is a trustee agency for projects that could directly or indirectly affect State sovereign land and their accompanying Public Trust resources or uses. Additionally, because the Project involves work on State sovereign land, the Commission will act as a responsible agency. A2-1

<u>Commission Jurisdiction and Public Trust Lands</u>

The Commission has jurisdiction and management authority over all ungranted tidelands, submerged lands, and the beds of navigable lakes and waterways. The Commission also has certain residual and review authority for tidelands and submerged lands legislatively granted in trust to local jurisdictions (Pub. Resources Code, §§ 6009, subd. (c); 6009.1; 6301; 6306). All tidelands and submerged lands, granted or ungranted, as well as navigable lakes and waterways, are subject to the protections of the common law Public Trust Doctrine.

As general background, the State of California acquired sovereign ownership of all tidelands and submerged lands and beds of navigable lakes and waterways upon its admission to the United States in 1850. The state holds these lands for the benefit of all people of the State for statewide Public Trust purposes, which include but are not limited to waterborne commerce, navigation, fisheries, water-related recreation, habitat preservation, and open space. On navigable non-tidal waterways, including lakes, the state holds fee ownership of the bed of the waterway landward to the ordinary low-water mark and a Public Trust easement landward to the ordinary high-water mark, except where the boundary has been fixed by agreement or a court. Such boundaries may not be readily apparent from present day site inspections. A2-1 (cont.)

Based upon the information provided and a preliminary review of our records, we have determined that the Lower American River (LAR), located within Sacramento County near Sites 2-2 and 2-3 is likely in a natural condition, non-tidal in this vicinity, navigable, and meandered on both banks on Rancho Del Paso, U.S. Township, and S & O Survey plats. The extent of State sovereign ownership is likely waterward of the current low-water mark on the right bank of the LAR. The proposed Site 2-3 work area appears to be located landward of State sovereign land; therefore, no lease would be required for work at Site 2-3. A2-2

However, it appears the proposed Site 2-2 Work Area is located waterward of the current low-water mark on the LAR and would encroach onto State sovereign land. Therefore, a lease would be required for work in this area. Please contact Sandra Avila with the Land Management Division (contact information provided below) for further information on the Commission's leasing requirements. A2-3

In addition, we have determined that the LAR near the proposed Arden Pond and Rossmoor West mitigation sites is likely in a natural condition, non-tidal in this vicinity, navigable, and meandered on both banks on the rancho plats. The uplands at this location are within Rancho Del Paso and Rancho San Juan (right bank), and Rancho De Los Americanos and Rancho New Helvetia (left bank). The extent of State sovereign ownership is likely waterward of the current low-water mark. For the proposed Arden Pond mitigation site, the improvements appear to be located landward of the current low-water mark on the banks of the LAR and are not on State sovereign land. Also, for the proposed Rossmoor West mitigation site the improvements also appear to be located landward of State sovereign land. The improvements include excavation at, and landward of, a water surface elevation which is likely landward of the current low-water mark of the banks of the LAR near the proposed mitigation projects. Therefore, no lease would be required for work within these mitigation sites. A2-4

Project Description

CVFPB proposes to install erosion protection features along the LAR at levee sites 2-2 and 2-3. The purpose of the Project is to reduce the overall flood risk within the study area. The design objectives would: A2-5

- Minimize impacts on hydraulic capacity

- Maximize the width of the planting benches without impacting hydraulic capacity
- Minimize excavation into the existing berm and preserve existing resources where possible
- Minimize the footprint into the existing channel.

In addition, the Project includes the development of three sites to provide for the mitigation of impacts to biological resources in the LAR; the Arden Pond Mitigation Site, and the Rossmoor West and East Mitigation Sites. The mitigation sites would create riparian, shaded riverine aquatic, and valley elderberry beetle habitats. A2-5 (cont.)

From the Project Description, Commission staff understands that the Project would include the following components that have potential to affect State sovereign land:

- Positioning rock slope protection around the Howe Avenue Bridge piers.

- Depositing launchable rock on the existing bank at a 2:1 slope, extending below the ordinary low-water mark at Site 2-2.

Environmental Review

Commission staff requests that the CVFPB consider the following comments on the Project's Draft SEIS/EIR, to ensure that impacts to State sovereign land are adequately analyzed for the Commission's use of the SEIR to support a future lease approval for the Project. A2-6

Cultural Resources

1. Tribal Consultation: Page 3-103 states that consultation with Native American is ongoing at this time. Commission staff requests that the results of consultation be provided when complete.

2. Title to Resources: Commission staff requests the Archaeological Discovery Plan (Mitigation Measure [MM] CR-2, found on page 3-108) include a statement that the title to all archaeological sites, and historic or cultural resources on or in the tide and submerged lands of California is vested in the State and under the jurisdiction of the Commission (Pub. Resources Code, § 6313). Commission staff also requests that MM CR-4 include the following statement: "The final disposition of archaeological, historical, and paleontological resources recovered on State lands under the jurisdiction of the California State Lands Commission must be approved by the Commission." Finally, Commission staff requests that the lead agencies consult with staff attorney Jamie Garrett (see contact information below) should any cultural resources on State lands be discovered during construction of the proposed Project. A2-7

Climate Change

3. Climate change is mentioned in Section 3.10, *Greenhouse Gas Emissions and Energy Consumption* of the Draft SEIS/EIR; however, there is no distinct discussion of how the Project would address aspects of climate change other than greenhouse gases that are relevant to the Project. In addition, as stated in *Safeguarding California Plan: 2018 Update* (California Natural Resources Agency 2018), climate change is projected to increase the frequency and severity of natural disasters related to flooding, drought, and storms. In rivers, more frequent and powerful storms can result in increased flooding conditions and damage from storm-created debris as well as decreased bank stability and structure. Conversely, climate-change induced droughts could decrease river levels and flow for extended periods of time. Although relevant information is provided throughout the document, Commission staff suggests that CVFPB consider adding a separate discussion of how the work purposed at Site 2-2 addresses the potential effects of climate change noted above. A2-8

Thank you for the opportunity to comment on the Draft SEIS/EIR for the Project. As a responsible and trustee agency, Commission staff will need to rely on the certified Final SEIS/EIR for the issuance of any lease as specified above and, therefore, we request that you consider our comments prior to certification of the SEIS/EIR.

Please send copies of future Project-related documents, including electronic copies of the Final SEIS/EIR, Mitigation and Monitoring Program, Notice of Determination, CEQA Findings and, if applicable, Statement of Overriding Considerations when they become available. Please refer questions concerning environmental review to Cynthia Herzog, Senior Environmental Scientist, at (916) 574-1310 or cynthia.herzog@slc.ca.gov. For questions concerning archaeological or historic resources under Commission jurisdiction, please contact Staff Attorney Jamie Garrett, at (916) 574-0398 or jamie.garrett@slc.ca.gov. For questions concerning Commission leasing jurisdiction, please contact Sandra Avila Public Land Management Specialist, at (916) 574-0282 or sandra.avila@slc.ca.gov. A2-9

Sincerely,

Nicole Dobroski, Chief
Division of Environmental Planning
and Management

4 (A presentation was given by panel presenters,
5 after which the following proceedings were
6 had:)
7 MR. MARTIN: Thank you, Erick. So I'm going
8 to go ahead and look at the attendee list and see if
9 there's any interested individuals that would like to
10 comment on this environmental document.
11 Like we said before, feel free to look at your
12 screen and click on the hand. It will raise and we can
13 unmute you if you have any comments that you would like
14 to make on this project.
15 I'm not seeing any hands right now. I guess
16 everyone wants to submit their comments in writing.
17 Actually, that's a good thing. We encourage it.
18 MR. BEAUCHAMP: This is Dave. Mary has got
19 her hand up. I think it's probably not showing up very
20 well in the little box.
21 MR. MARTIN: Okay. I see Mary now. It must
22 have just went up.
23 Mary, if you could state your name and spell
24 it out and state the organization that you are
25 affiliated with, and we will go ahead and get started.

1 PUBLIC SPEAKER: My name is Mary Maret,
2 M-a-r-e-t. I am with Sacramento County Regional Parks.
3 It looks like I am the only person at this event; is
4 that true?
5 Are you not allowed to answer any questions at
6 all? Okay.
7 So just, mainly, I heard you guys talk a lot
8 about the Sac Upgrades website. I looked at it last
9 week, and Contract 1 was way out of date as far as
10 checking it to see how the schedule is going. According
11 to the website, Contract 1 should have started already.
12 So if you are going to go ahead and talk about
13 how great the website is, you should probably keep it up
14 to date.
15 I am very familiar with this project. I will
16 be submitting a letter. So thank you. That's all I
17 have to say.
18 MR. MARTIN: Thank you, Mary.
19 If you could unclick your hand there, Mary,
20 that would be appreciated. Thank you.
21 Would anyone else like to make a public
22 comment for the record?
23 Scrolling up and down on this attendee list
24 box, because it doesn't allow me to maximize for some
25 reason, and I am not seeing any other hands as I'm going

A4-1

1 up and down on it.
2 So I appreciate the comment, Mary.
3 If there is anyone else that would like to
4 comment on the record, your time is now.
5 Okay. Well, thank you for everyone that
6 joined the public meeting for the ARCF, American River
7 Common Features project for the American River,
8 Lower American River Contract 2.
9 We hope to get some more comments in writing.
10 We will respond to those comments in the final
11 environmental document.
12 Thanks again for coming out today.

Subject: Draft Supplemental Environmental Impact Statement / Environmental Impact Report (EIS/EIR) for American River Watershed Common Features, Water Resources Development Act of 2016 Project, American River Contract 2 (SAC201301442)

To Whom It May Concern:

Thank you for providing the Sacramento Metropolitan Air Quality Management District (Sac Metro Air District) the opportunity to review the Draft Supplemental EIS/EIR for the American River Contract 2 project. The Sac Metro Air District is required by the California Health and Safety Code to represent the residents of Sacramento County in influencing the decisions of other agencies whose actions may have an adverse impact on air quality. In that spirit, Sac Metro Air District staff provides the following comments. A5-1

The EIS/EIR indicates the bicycle/pedestrian trail will be removed and relocated during construction and then reconstructed once the project construction is complete. It's important that the project proponents ensure bicyclists and pedestrians have a safe, convenient pathway to travel during construction of the project so they can continue to support air quality improvements in the Sacramento Region by using a clean transportation mode. As part of measure TR-2, Provide Bicycle and Pedestrian Access, Sac Metro Air District recommends the project proponents coordinate with organizations such as WALKSacramento and the Sacramento Area Bicycle Advocates to inform safe bicycle/pedestrian relocation routes and trail reconstruction activities. (page 3-121) A5-2

Measure AQ-3, Develop and Implement a Plan for Enhanced On-Site Exhaust Controls, includes language that is not applicable to this project and should be removed in the final EIS/EIR: "Mitigation Measure AQ-3 will sunset on January 1, 2028, when full implementation of the CARB In-Use Off-Road Regulation is expected." (page 3-136) A5-3

Sac Metro Air District recommends a clarification be made in the summary of air quality impacts regarding mitigation fees. Mitigation fees cannot be used to reduce emissions to zero for projects exceeding de minimis General Conformity thresholds. (page 3-137) Fees can be used to mitigate emissions that exceed the Sac Metro Air District's thresholds in years where General Conformity de minimis thresholds are not expected to be exceeded for the overall American River Common Features General Reevaluation Report project as noted in its EIR/EIS and General Conformity Determination. Emissions in calendar years 2022 and 2023 for the overall project are expected to exceed de minimis A5-4

thresholds and to be mitigated with an emission reduction credit loan from the Sac Metro Air District as noted in the General Conformity Determination. A5-4 (cont.)

The EIS/EIR includes Measure GHG-1, Avoid, Minimize, and Compensate for Greenhouse Gas Emissions Effects, in Table ES-1, Summary of Impacts and Mitigation Measures. The discussion in the Greenhouse Gas Section should clearly identify this mitigation measure and provide details on the timing of greenhouse gas emissions offsets. (page ES-8 and page 3-147) A5-5

All projects are subject to Sac Metro Air District rules in effect at the time of construction. A list of common construction related rules[1] and the complete listing of rules[2] are available on the Sac Metro Air District's website. A5-6

Please contact me at khuss@airquality.org or 279-207-1131 if you have any questions regarding these comments.

Sincerely,

Karen Huss

RE: American River Contract 2

To whom it may concern:

Thank you for providing Sacramento County Department of Regional Parks (Regional Parks) the opportunity to provide comments on the proposed project's Draft Supplemental EA/EIR (Document). Because the American River Contract 2 project is so large, multi-faceted, and covers a large geographical area on the American River Parkway, the first part of this letter contains our understanding of the project components, while the second part of our letter contains our comments on the Document.

The project components entails building bank protection along two river bank segments (Sites 2-2 and 2-3), creating three off-site habitat restoration sites (Arden Pond, Rossmoor East and Rossmoor West), reconstruction of the Campus Commons Golf Course, and realignment of portions of the Jedediah Smith multi-use trail and of the equestrian/hiking trail. A6-1

The proposed design of erosion protection at Site 2-2 (north bank at the Howe bridge crossing) includes adding launchable rock toe protection, grading back the existing slope, adding planting benches with rock tie backs,

and covering slopes with soil filled rock. The middle third of the site includes graded planting benches, separated by 4' wide rock tie-backs extending between the launchable rock toe to the top of the bank revetment. The upstream and downstream thirds of the site would be graded back and covered with soil-filled rock revetment. Construction of Site 2-2 would likely require relocation of the equestrian/hiking trail.

The proposed design of erosion protection at Site 2-3, (north bank from the Campus Commons Golf Course upstream to the bank opposite the Fairbairn water treatment intake structure) includes grading back the existing steep bank along the length of the entire site, to create a series of planting benches with transverse buried rock structures. The lower bench would contain rock tie backs connected to a launchable spur (a rock-filled box-like structure) that are 50' wide x 8' deep, 32' to 42' long and spaced 100' to 150' apart. It would also add a 170' long launchable rock trench below the H Street Bridge and replace the concrete storm drain channel at the golf course with a rocked channel. The cut bank excavation and grading would require realigning approximately 1/3 mile of the Jedediah Smith multi-use trail and likely realigning more than a mile of equestrian/hiking trail. It would also impact the Campus Commons Golf Course by removing portions of the golf course along the riverbank, closing the course for two years, and reconstructing a new, smaller golf course with a new footbridge and safety netting along the bike trail. A6-1 (cont.)

Even with on-site revegetation, in-stream woody material, and other on-site habitat features, the construction Sites 2-2 and 2-3 would require considerable amounts of off-site aquatic and terrestrial habitat mitigation. Proposed mitigation includes the reconstruction of Arden pond into a smaller fishing pond with a large island and seasonal side channel, as well as excavation and grading of two riverside shoreline areas. Portions of fallow fields, located on Rossmoor Bar would also be planted with trees and shrubs.

We understand that the project partners will continue to coordinate with Regional Parks, through the Bank Protection Working Group, as well as with our planning efforts to align on the most reasonable long-term approach to mitigation in the American River Parkway (Parkway). A6-2

Our comments pertain to public outreach, trail detours and realignments, Arden Pond mitigation alternatives analysis, and long-term maintenance of the bank protection sites. A6-3

Public Outreach

- We appreciate the public outreach that the USACE continues to provide to the Parkway users, stakeholders, and to the surrounding community through press releases, public meetings, social media, and other public outreach. A6-4
- In addition to the proposed signage for closures and detours, we request that each project area should provide signage with a project description to communicate what is happening in the area to Parkway users.

Trail Closures and Detours

- We appreciate the Document's attention to detail regarding public outreach and notification outline in Mitigation Measure REC-1: Avoid and Minimize Effects on Recreational Use. A6-5
- We request that trail detours*, including detour trail surface treatments*, be developed in consultation with Regional Parks staff (in addition to the City of Sacramento Bicycle and Pedestrian Coordinator.)
- Impacts to the designated Equestrian/Hiking trail (which generally runs between the paved bike trail and the river) has not, but should be considered in the Document. Expected impacts include closures, detours, and permanent realignments. A6-6
- We request that the designated Equestrian/Hiking trail detours and permanent realignments be developed in consultation with Regional Parks staff.
- Section 4.1.1 (pertaining to Projects Contributing to Potential Cumulative Effects) should include the SAC-51 American River Bridge Deck Replacement project. The bridge project will be concurrent with Contract 2, resulting in a cumulative impact of a five to six mile detour of the Jedediah Smith multi-use trail (from the Howe Bridge area to the Capital City Freeway area) for through traffic. A6-7

Arden Pond

- In consideration of the concerns raised about the proposed Arden Bar project and with the knowledge that additional offsite mitigation will be required for other upcoming bank protection work, we are requesting that a mitigation alternatives analysis, specific for sites mitigating juvenile salmonid habitat impacts be conducted, consistent with the process outlined in the Natural Resource Management Plan for the American River Parkway. A6-8
- We also request that other mitigation habitat categories as well as recreational impacts be taken into account in this analysis. This will enable the Department to ensure we are evaluating all aspects of proposed mitigation sites, consistent with the federal and state Wild and Scenic River Acts. A6-9

- We appreciate that ACOE has worked on design refinements to the proposed habitat mitigation at Arden Bar, including pond depth to address invasive water primrose, recreational fishing activities, construction traffic plans, and maintenance needs for Regional Parks. However, we have concerns that the proposed mitigation will have unintended consequences to the waterfowl that currently use the site. This pond provides Parkway users with an easy access point to observe and enjoy these waterfowl and that the pond itself is a unique waterfowl habitat feature within the American River Parkway. A6-10

Long-Term Maintenance of Bank Protection Sites

- The Operations and Maintenance Manual (O&M Manual) for this project should require that the on-site habitat mitigation features, including planting benches, be maintained or rebuilt, especially after deployment of the launchable rock feature(s) during a flood event. A6-11

We appreciate the opportunity to comment. If you have any questions please contact Mary Maret at (916) 875-4918 or maretm@saccounty.net.

Subject: **American River Watershed Common Features, Water Resources Development Act of 2016, American River Contract 2 | EIR | 2005072046**

Dear Mr. Claret:

The Sacramento Municipal Utility District (SMUD) appreciates the opportunity to provide comments on the Draft Environmental Impact Report (EIR) for the American River Watershed Common Features, Water Resources Development Act of 2016, American River Contract 2 (Project, SCH 2005072046). SMUD is the primary energy provider for Sacramento County and the proposed Project area. SMUD's vision is to empower our customers with solutions and options that increase energy efficiency, protect the environment, reduce global warming, and lower the cost to serve our region. As a Responsible Agency, SMUD aims to ensure that the proposed Project limits the potential for significant environmental effects on SMUD facilities, employees, and customers. A7-1

It is our desire that the Project EIR will acknowledge any Project impacts related to the following: A7-2

- Overhead and or underground transmission and distribution line easements. Please view the following links on smud.org for more information regarding transmission encroachment:
  - https://www.smud.org/en/Business-Solutions-and-Rebates/Design-and-Construction-Services
  - https://www.smud.org/en/Corporate/Do-Business-with-SMUD/Land-Use/Transmission-Right-of-Way
- Utility line routing
- Electrical load needs/requirements
- Energy Efficiency
- Climate Change
- Cumulative impacts related to the need for increased electrical delivery
- The potential need to relocate and or remove any SMUD infrastructure that may be affected in or around the project area

SMUD has existing electrical facilities located throughout the project area footprint. All CalOSHA and State of California Public Utilities Commission safety clearances must be maintained during construction and upon completion. If any clearances cannot be maintained the project proponent shall be responsible for the cost of utility relocation. Upon project completion, all access and clearances must be maintained around all SMUD facilities. Public utility easements may be required for any new construction. A7-2 (cont.)

Both overhead 21kV lines and underground 12kV lines run adjacent to or within the project area and must remain.

More specifically, SMUD would like to have the following details related to the electrical infrastructure incorporated into the project description:

- On Page 2-52, SMUD would like to be made aware of the location of the new elderberry planting locations to ensure that they are not planted within our right of way including the footprint of current electrical poles and towers. A7-3
- On page 2-55, the document states, "Prior to grading, existing electrical lines… would be removed." Should the need for any existing electrical lines, either overhead or underground, need to be removed, electrical service would need to be maintained. Both providing this temporary service as well as reconstructing these lines, either in their existing location or in new locations, would need to be evaluated and included as part of the project. A7-4

SMUD would like to be involved with discussing the above areas of interest as well as discussing any other potential issues. We aim to be partners in the efficient and sustainable delivery of the proposed Project. Please ensure that the information included in this response is conveyed to the Project planners and the appropriate Project proponents. A7-5

Environmental leadership is a core value of SMUD and we look forward to collaborating with you on this Project. Again, we appreciate the opportunity to provide input on this EIR. If you have any questions regarding this letter, please do not hesitate to contact me at 916.732.6676, or by email at rob.ferrera@smud.org.

Sincerely,

Rob Ferrera

Email: spk-pao@usace.army.mil

SUBJECT: Draft Supplemental Environmental Impact Statement/Environmental Impact Report (EIR/EIS) for American River Watershed Common Features, American River Contract 2

Thank you for including the City of Sacramento in the environmental review process for the project referenced above.

The project includes installation of 7,800 linear feet of erosion protection to strengthen two levee segments of the Lower American River and prevent levee failure. At site 2-3 along the levee, approximately 363,000 cubic yards of soil would be excavated and removed off site.

The City of Sacramento Department of Public Works has the following comments on the project:

1. The proposed mitigation includes the requirement that safe pedestrian and bicyclist access be maintained around construction areas. The mitigation should ensure access for pedestrians and bicycle trails is maintained and include:
    a. Provision of driveway access control between levees and City roadways so that pedestrian, and bicycle movements are maintained.
    b. Clear rerouting of pedestrian and bicycle trails and installation of signage for traffic and alternative transportation routes.
    c. Early notification to affected neighborhoods.
    d. Early coordination with the City's Active Transportation Commission. Please contact Jennifer Donlon Wyant, Transportation Planning Manager, City of Sacramento, Department of Public Works, Transportation Division, JDonlonWyant@cityofsacramento.org

A8-1

2. The construction Contractor must provide a construction traffic control plan per City Code 12.20.030 to the satisfaction of the City Traffic Engineer.

A8-2

The plan shall ensure that acceptable operating conditions on local roadways and freeway facilities are maintained. At a minimum, the plan shall include:

- The number of truck trips, time, and day of street closures.
- Time of day of arrival and departure of trucks.
- Limitations on the size and type of trucks, provision of a staging area with a limitation on the number of trucks that can be waiting.
- Provision of a truck circulation pattern.
- Maintain safe and efficient access routes for emergency vehicles.
- Manual traffic control when necessary.
- Proper advance warning and posted signage concerning street closures.
- Provisions for pedestrian safety.

A copy of the construction traffic management plan shall be submitted to local emergency response agencies and these agencies shall be notified at least 14 days before the commencement of construction that would partially or fully obstruct roadways.

A8-2 (cont.)

Please provide our office with copies of any further actions regarding this project. A8-3

If you have any questions regarding these comments, please contact me at (916) 808-8930 or by email at pclarke@cityofsacramento.org

Sincerely,

Pelle Clarke, PE

E-mail: spk-pao@usace.army.mil

Dear Madam/Sir,

The U.S. Army Corps of Engineers (USACE) is proposing to install erosion protection features along the Lower American River in Sacramento County. The draft American River Common Features American River Contract 2 SEIS/SEIR included mitigation of impacts, including the need for compensatory mitigation for shaded riverine aquatic (SRA) habitat that supports salmonids and other fish and wildlife species. The Arden Pond Habitat Improvement Site is being considered and designed as an SRA mitigation site for the erosion protection works. O1-1

We understand that the USACE has recently directed SAFCA to acquire the Urrutia property as an SRA compensatory mitigation site for the erosion protection works. We further understand that the Urrutia property could fulfill all the SRA mitigation obligations required of the USACE for the erosion work occurring in the American River Parkway. If this is correct, then there would be no need for SRA mitigation at the Arden Pond site to compensate for impacts on the Lower American River. O1-2

The American River stakeholder community strongly values Arden Pond as an important and unique habitat along the American River Parkway that provides opportunities to avian species for nesting, resting and foraging. Pond habitat with a mixture of deep and shallow calm water is rare along the Parkway, and not only provides for wildlife but also provides for unique recreational and educational experiences. As such, it is important to the stakeholder community that we understand the intentions of the USACE with regard to Arden Pond. O1-3

- Has the USACE directed SAFCA to acquire the Urrutia Property?
- Would the Urrutia property satisfy the SRA mitigation requirements of the USACE for their erosion work along the Lower American River?
- If so, will the USACE drop Arden Pond from their project list?
- If not, why not?

O1-4

If the USACE intends to proceed with the Arden Pond site for their SRA mitigation obligations then we request a full and complete cumulative impact analysis in the supplemental EIR/S on the effects of modifying pond habitat within and adjacent to O1-5

the Lower American River. Urrutia, Arden Pond, and any other similar habitat within and adjacent to the Lower American River that the USACE is considering should be included in this analysis. O1-5 (cont.)

Your rapid response to these questions would be greatly appreciated.

Thank you for your attention to this matter.

Sincerely,

Stephen Green

Stephen Green
President - Save the American River Association

Date: 11 June 2021

To: Save the American River Association

From: Daniel Airola, Conservation Chair, Central Valley Bird Club

Subject: Potential avian impacts of proposed modifications to pond at William B. Pond Recreation Area

At your request, I am offering comments on *Arden Pond Mitigation Site – Avian Memorandum* prepared by Daniel Williams, HDR, dated 2 June 2021. Apparently, this memorandum was prepared as a response to our 12 April 2021 letter to the Save the River Association and Sacramento County Parks regarding mitigation use of the Arden Pond area. O2-1

The HDR memo provides a good list of species that could occur in the area now or under project conditions. It does not, however, consistently identify the levels of use of the pond area by various species. The memo also does not quantify habitat effects or provide any detail on the basis for the determining the effects of the project on species. We do not agree with the characterization of effects on birds that use the pond area. The memo also does not address the effects on the Great Blue Heron and Great Egret rookery that is immediately upstream of the project site, with respect to potential construction disturbance and effects of habitat changes. O2-2

We detail our concerns regarding the project and the evaluation of effects in the following sections.

Wintering Waterbirds

A key resource of concern to the Central Valley Bird Club is the use the pond area for foraging and for nighttime resting by waterbirds during the non-breeding (migration and wintering) seasons. Based on my limited direct observation and cursory review of eBird records (https://ebird.org/barchart?r=L225812&yr=all&m=), the most abundant of these species are the Wood Duck, Common Merganser, Common Goldeneye, Barrow's Goldeneye, Bufflehead, Ring-necked Duck, Ruddy Duck, Double-crested Cormorant, and Ring-billed, California, and Herring gull species. Resting use by many of these species is of particular importance because it appears that calm water habitat is a key habitat component for a variety of birds that use the American River to actively forage during the daytime. A calm roosting area allows species to conserve energy and avoid predators and disturbance. O2-3

The key impact mechanisms that need to be addressed in more detail to determine project effects include:

- effects of reducing the size of the pond on waterbird use, due to the reduced area protected from shoreline disturbance
- effects of increased use of the pond by bass fisherman

- ancillary effects of increased fishing use, included development of boat facilities, water pollution, and hazards posed by discarded fishing line and hooks.

Limited information is available on which to assess the current use and value of Arden Pond to waterbirds. The amount of alternative calm-water habitat along the American River has not been documented. The level of use of Arden Pond and other calm-water habitat areas by wintering waterfowl during daytime and for night roosting has not been quantified. The habitat factors that affect levels of bird use (pond size, configuration, adjacent habitat, human use) also have not been evaluated. We believe that this additional information is needed in order to evaluate potential project effects. Such an evaluation would not be difficult to conduct and should be done. O2-3 (cont.)

Notwithstanding the limited information available from which to draw conclusions, The Central Valley Bird Club is concerned about these aspects of the project, as outlined below.

Change in Pond Size and Configuration. Waterbirds at Arden Pond tend to disproportionately use the central portions of the pond and avoid shoreline areas. Presumably, the central pond areas provide protection from disturbance from humans on the shoreline, potential shoreline predators, and provide more visibility of potential avian predators. Reducing the size of the pond inevitably reduces the amount of secure area and increases the proportion of area near shorelines. Such a change in configuration could therefore disproportionately reduce waterbird use. O2-4

Increased Human Disturbance by Bass Anglers. Separate from the question of why a Parkway area should be dedicated to propagating non-native warmwater bass, the effects of bass fishing could detrimentally harm waterbird use through direct disturbance. In 2020, I observed a single bass boat in the pond cause the departure of a substantial portion of the waterbirds that were using the area The reconfigured pond would reduce the size of the pond from its existing 32 acres to perhaps half of that area. Promoting use of the area by bass fishermen, and resulting use, could substantially reduce water bird use of the pond, regardless of its habitat conditions. O2-5

Ancillary Impacts of Encouraging More Bass Angling. Encouraging angling for non-native warmwater bass would require improvement of a boat ramp that would impact shoreline habitat. It creates the potential for fuel spills into the pond. Increased fishing seems to inevitably lead to more discarded fishing line and hooks, which pose hazards to wildlife. The effects of bass on the food base for native species and bass predation on fledgling waterbirds also has not been addressed. Bass fishing use also would conflict with other users due to noise, displacement of wildlife, use of parking space, and safety hazards crossing the American River Bike Trail. O2-6

Effects on the Heron and Egret Rookery O2-7

A longtime rookery occupied by Great Blue Herons and Great Egrets occurs on the island immediately upstream of the project site. I do not know if the nesting population at this rookery has been carefully censused. On 12 February this year, I observed 24 nest structures, at least 14 of which were occupied by Great Blue Herons. (Great Egrets typically start nesting later than the herons.) My impression is that the pond areas does not receive a substantial amount of use by foraging herons and egrets, but other birders believe that the use level is higher (J. Langham, pers. comm.). I observed 8 active nests on 10 June 2021 at a time when foliage obscured visibility. The three heron nests that were highly visible had 2, 1, and 1 nestlings that were close to fledging age then.

Construction of the project, if it occurs during the extended nesting season (January through June), has potential to disturb the herons and egrets and disrupt nesting. Changes to the water depths and velocities under post-project conditions also has potential to affect heron and egret use of the area. These species typically do not use areas of fast-moving water.

Studies should be initiated to determine where the herons and egrets from this colony are foraging, to determine the potential effects of changes in habitat conditions under the project. A more formal assessment should be conducted, based on literature review and local experience, of the potential effects of construction disturbance on this colony.

O2-7 (cont.)

Conclusion

In summary, we believe that the creation of a rearing channel at the current site of Arden Pond is a bad idea that will be harmful to wintering waterbirds and may be harmful to the heron and egret rookery, two of the most important wildlife uses at the site. We believe that developing the pond remnant as a bass fishing area also is harmful to waterbirds and other parkway users. The mitigation project should not proceed at this area. If the Corps chooses to proceed, it should initiate careful studies to determine the availability of calm water habitat on the lower American River, used of this habitat by waterbirds, and the characteristics that determine relative use levels. Only then can an informed evaluation of effects of the project be conducted. We predict that such a study would validate our impressions of the value of the site and would lead to continue opposition to its use for mitigation.

Public Affairs Office
U.S. Army Corps of Engineers
1325 J Street Room 1513
Sacramento, CA 95814
spk-pao@usace.army.mil

Public Affairs Office of the U.S. Army Corps of Engineers:

I am writing on behalf of the Sacramento Valley Chapter of the California Native Plant Society regarding the Draft Supplemental EA/EIR for the American River Contract 2 - American River Watershed Common Features (ARCF) General Reevaluation Report (GRR)

Our comments are as follows:

1. **Mitigation Compensation and Reporting.** The Proposed Action consists of: (1) the installation of approximately 7,800 linear feet of erosion protection and on-site riparian habitat features along two levee segments of the LAR (Sites 2-2 and 2-3); (2) creation of three off-site riparian habitat restoration sites (Arden Pond and two areas at Rossmoor Bar) for mitigation; (3) associated staging areas, stockpile sites, and haul routes; and (4) reconstruction of the Campus Commons Golf Course.

   The proposed off-site mitigation appears to address not only environmental impacts associated with erosion protection related activities at Site 2-2 and Site 2-3 but potentially other proposed construction sites on the American River Parkway under the ARCF GRR (e.g., Contract 1, Contract 3, etc.). This mitigation also partially fulfills the mitigation requirements of the ARCF GGR Biological Opinions for the National Marine Fisheries Service and United States Fish and Wildlife Service. Section 2.3.3 indicates that "Conservation measures underway by USACE, the CVFPB, and SAFCA that are in the planning and acquisition stages may include but are not limited to: conservation banks and locations in the County of Sacramento's American River Parkway (beyond the locations identified below) that are suitable for establishing woodlands, receiving elderberry shrubs that need to be transplanted, and SRA habitat." It also appears that some mitigation proposed for the American River Parkway under the current Proposed Action addresses ARCF GGR impacts occurring outside the Parkway. If so, this mitigation needs to be clearly identified and justified. We

O3-1

strongly recommend mitigation be located on-site, or as close to where impacts occurred, to the extent feasible.

The current supplemental environmental document does not specifically identify all locations, acreages and type of habitat to address impacts associated with Site 2-2 and 2-3 activities, and includes mitigation to address ARCF GGR impacts for activities not associated with Site 2-2 and Site 2-3. Consequently, tracking mitigation associated with each ARCF GGR contract along with required Biological Opinion requirements using environmental documentation is impractical. Consequently, the following measure is recommended: O3-1 (cont.)

> *Develop and submit an annual ARCF GGR compensation mitigation accounting plan to the Sacramento County Regional Parks Department and the Lower American River Task Force for the Lower American River that details installed and proposed mitigation by habitat types, acreages, map locations and specifically correlated with all mitigation impacts and requirements, and including monitoring requirements.*

2. **Campus Commons (Site 2-3).** The Campus Commons Golf Course (a non-conforming land use in the Parkway) occupies a significant portion (250-500 feet wide) of the north (river right) riverbank within proposed Site 2-3. This narrow corridor currently has very little connecting native habitat and will be substantially affected by the Proposed Action by a significant cutting back of the existing bank. After completion of the Proposed Action, this section of the river will continue to have only a marginal amount of connecting native habitat unless additional habitat is planted on-site. O3-2

   Under the Proposed Action, as part of the reconstruction of the golf course, approximately 40 trees from the "preferred planting lists established by the County" would be planted throughout the course. In order to address native habitat impacts on-site where habitat connectivity is very limited, the following is recommended:

   > *All golf course reconstruction tree plantings shall be from Sacramento County's "List of Species Approved for Planting on the American River Parkway".*

3. **Arden Pond Mitigation Site.** There have been stakeholder and member concerns and questions expressed about the proposed mitigation occurring at Arden Pond including at the American River Parkway Advisory Committee, Sacramento County Parks Commission, and the Lower American River Task Force. The supplemental environmental document does not specifically acknowledge or address these concerns, which is a significant omission. O3-3

   Currently the pond and encompassed island at the Arden Pond mitigation site provides rare and important habitat (i.e., pond and fully isolated island) within the American River Parkway. Under the Proposed Action, the pond area would be significantly reduced and the island would be eliminated by becoming part of the pond shoreline. O3-4

   The following is recommended:

Modify the Proposed Action at Arden Pond to retain the pond island and enhance island habitat with appropriate native plantings, If it is infeasible to retain the island, then construct a new island within the remaining pond area, with appropriate native plantings to maximize habitat value. O3-4 (cont.)

Our Chapter sincerely appreciates the opportunity to provide comments. Please contact Dan Meier at 14danmeier@gmail.com for questions regarding these comments.

Sincerely,

Janet Koster

Subject: Army Corp work at Arden Pond

To whom it may concern,

I am writing to notify you of my strong opposition to the draft NRMP describing extensive work on the pond at William B. Pond park. I1-1

As a long time resident of the area, avid birdwatcher and former Executive Director of the Effie Yeaw Nature Center, I believe this project will have numerous destructive impacts on the area.

First of all, the pond is used extensively as a resting and feeding place for migratory waterfowl, including Buffleheads, Goldeneyes (Barrow's and Common), Scaup, shorebirds and others. These birds cannot paddle on the river constantly and need a resting place that is free from human and mammal (wild and pet) disturbance. I1-2
Channeling of the river through the pond would reduce the quality of the pond as a resting place. In addition, making the islands into a solid land bridge would further disrupt and disturb the use by migratory and resident birds (ducks and shorebirds) all year round and would become a track for bicycle use against county ordinances. It will put people and dogs much too close to the wildlife. I1-3

Additionally, I'm very concerned about the number of trees that would be removed, reducing the stability of the riverbed and banks during high water events. I1-4

I believe there needs to be much more demonstration that these type of habitat improvements are successful and that they should be considered at other locations, such as Bushy Lake. High water events dramatically move gravel in the riverbed and such an event could, and probably will, make all of this destruction futile. I1-5

Thank you for considering these concerns,

Letter I1

Betty Cooper

Letter A1: United States Environmental Protection Agency Region IX

A1-1 See responses to comments A1-2 through A1-6. The erosion protection designs for the Proposed Action as described in the Draft Supplemental Environmental Impact Statement/Supplemental Environmental Impact Report (SEIS/SEIR) have been re-evaluated by National Marine Fisheries Service (NMFS) and U.S. Fish and Wildlife Service (USFWS). Both agencies concluded in their Biological Opinions that the Proposed Action would not jeopardize the continued existence of species or adversely modify critical habitat. The following text change on page 2-7 in Chapter 2, *Alternatives* of the Draft SEIS/SEIR reflects the current status of the NMFS and USFWS evaluation:

> **Biological Opinion Requirements:** Both the National Marine Fisheries Service (NMFS) and the U.S. Fish and Wildlife Service (USFWS) issued Biological Opinions (BOs) in 2015 for the ARCF GRR EIS/EIR. Both BOs include Conservation Measures, Reasonable and Prudent Measures, and Terms and Conditions. The potential effects of the Proposed Action on the species and/or their critical habitat originally covered in the BOs ~~are being~~ have been re-evaluated based on updated designs to ensure all aspects of the Proposed Action would not jeopardize the continued existence of species or adversely modify critical habitat. The USFWS BO was issued in March 2021 and the NMFS BO was issued in May 2021. Both BOs concluded that the Proposed Action would not jeopardize the continued existence of species or adversely modify critical habitat.

A1-2 The USACE will continue to coordinate with the NMFS and the USFWS under the Biological Opinions (BOs) and Reinitiation Biological Assessment (BA) under Section 7 of the Endangered Species Act consultation, as described on pages 3-45, 3-96 to 3-99, 5-4 to 5-5, and 5-8 of the Draft SEIS/SEIR. Implementation of the Proposed Action will comply with conditions of the BOs by both resource agencies for mitigation of impacts to endangered species for construction and maintenance activities. The reference to page 2-25 points to a discussion about effects of erosion on establishing vegetation at Site 2-3. As stated on page 2-25, it is possible that a large flood event could occur during the first 3 years when plants are still establishing, and could have the potential to cause the loss of the new plantings. There are several features that are incorporated into the design of the Proposed Action that would help prevent such losses (e.g., erosion control fabric to protect soil and seeds) but a possibility of plant loss which would require replanting is unavoidable. Mitigation Measure VEG-2: Retain, Protect, and Plant Trees On-Site on page 3-40 of the Draft SEIS/SEIR would provide the performance standards and adaptive management tasks for replacement and replanting areas that experience vegetation loss and erosion.

The reference to page 3-76 points to a discussion about long-term operation and maintenance (O&M) activities that could affect the valley elderberry longhorn beetle. As stated on page 3-76, the estimated impact of long-term O&M activities would be "up to 0.5 acres." As further stated on page 3-76, the acreage of impact from long-term O&M would be tracked over time to determine the amount of offsite mitigation, as required by the BO. Furthermore, reinitiation with USFWS would be required if the impact increased above the estimated 0.5 acres.

A1-3 The USACE is developing Long-Term Management Plans (LTMPs) as updates of the Habitat Mitigation Monitoring and Adaptive Management Plan (HMMAMP), as stated on pages 3-40, 3-41, 3-90, 3-97, 3-99, in coordination with NMFS and USFWS to comply with conditions of the BOs. This effort includes the development of refined success criteria for on-site mitigation. Through ongoing Endangered Species Act Section 7 Consultation, USACE, CVFPB, and SAFCA will work with USFWS and NMFS to develop the LTMPs for on-site mitigation, which will include remedial actions to be taken in the event that on-site mitigation is compromised in the future. Remedial action may include, but is not limited to, replanting, creation of additional off-site habitat, or purchase of mitigation bank credits. Implementation of the LTMPs would include adaptive management in response to future potential impacts of launchable rock events on riparian and fish habitat, including mitigation ratios, success criteria, monitoring, and maintenance. As "living documents," the purpose of the LTMPs is to adapt mitigation measures to future hydrologic and geomorphic conditions within the flood system of the approved projects in the 2016 American River Common Features General Reevaluation Report Final EIS/EIR. The USACE will estimate the long-term failure probability of launchable rock features by the end of 2021, as required in the BOs. But modeling for every possible kind of flow or flood event is beyond the scope of impact analysis required under NEPA and CEQA. Further, the design of the Proposed Action includes river flows that are regulated upstream at Folsom Dam to a maximum rate of 160,000 cubic feet per second. These maximum flows are the result of recent improvements at the dam to increase storage and controlled releases of flows during storm events that are forecasted with future potential climate change events included in the design and operation of Folsom Dam. See pages Section 3.3, *Hydrology and Water Quality* on pages 3-7 to 3-8 and 3-11 to 3-14 in Chapter 3, *Affected Environment and Environmental Consequences* of the Draft SEIS/SEIR for the analysis of effects related to the design and stability of the Proposed Action to meet safety criteria under future foreseeable maximum regulated flow conditions. In addition, see Sections 3.4, *Vegetation and Wildlife*, 3.5 *Fisheries*, and 3.6 *Special Status Species* for the analysis of impacts to biological resources and associated mitigation measures to reduce adverse effects on native habitat function and riparian vegetation. See also response to comment A1-2.

A1-4 See response to comment A1-3.

A1-5 The comment includes recommendations related to specific measures and compensatory mitigation within the BOs (see response to comment A1-3). Impacts from construction, operation and maintenance of the Proposed Project were analyzed throughout Chapter 3, *Affected Environment and Environmental Consequences*. This chapter includes a detailed analysis of the impacts and mitigation associated with the Proposed Action, including previously adopted mitigation measures from the 2016 American River Common Features General Reevaluation Report (ARCF GRR) EIS/EIR. Throughout the Draft SEIS/SEIR, reference to the 2016 ARCF GRR EIS/EIR was made to previous analyses and mitigation measures approved and adopted previously, as updated in the Draft SEIS/SEIR. The 2016 ARCF GRR EIS/EIR was approved and certified under NEPA and CEQA with the commitment of mitigation for impacts on biological resources that were documented in the USACE's Record of Decision under NEPA, in the Notice of Determination and Findings and Overriding Considerations under CEQA, and in previous BOs. The identification and procurement of more mitigation sites than those presented in the Draft SEIS/SEIR is being coordinated with NMFS, USFWS, Sacramento Regional Parks, and other partners on the BPWF, as described on pages 1-1 to 1-2 and 2-2 of the Draft SEIS/SEIR. The USACE is coordinating with NMFS and USFWS on the maintenance measures in the comment and as directed in the current BOs. There is no need to revise the analysis or mitigation measures provided in the Draft SEIS/SEIR that refer to the use of the approved HMMAMP and BOs.

A1-6 To address this comment, the text on page 3-32 in Section 3.4, *Vegetation and Wildlife* has been revised as follows:

> ***Wetlands and Other Waters***
>
> In July 2019, Environmental Science Associates biologists conducted an aquatic resources delineation for LAR Subreach 2. Subreach 2 is comprised of a total of 37.57 acres of potential waters of the United States: 22.43 acres of perennial riverine (i.e., American River), 15.04 acres of seasonally flooded forested wetlands that are comprised of a riparian woodland overstory and a riparian scrub understory, and 0.10 acres of drainage ditch (Appendix C). <u>The term "forested wetlands" is used interchangeably in this Draft Supplemental EIS/EIR with the term "seasonally-flooded riparian habitat."</u>

To address this comment, the text on page 5-7 in Chapter 5, *Compliance with Federal and State Laws and Regulations* has been revised as follows:

> ## 5.1.11 Executive Order 11990, Protection of Wetlands
>
> The purpose of EO 11990 is to "minimize the destruction, loss or degradation of wetlands and to preserve and enhance the natural and beneficial values of wetlands." To meet these objectives, EO 11990

requires Federal agencies, in planning their actions, to consider alternatives to wetland sites and limit potential damage if an activity affecting a wetland cannot be avoided. EO 11990 applies to:

- acquisition, management, and disposition of Federal lands and facilities construction;
- improvement projects which are undertaken, financed, or assisted by Federal agencies; and
- Federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulation, and licensing activities.
- As discussed in Section 3.4, *Vegetation and Wildlife*, ~~no wetlands are located within the footprint of the Proposed Action,~~ forested wetlands are located within the footprint of the Proposed Action and will be impacted during construction activities. However, impacts to forested wetlands will be minimized to the greatest extent feasible. Where feasible, forested wetlands will be restored onsite and additional forested wetlands will be created within the American River and other offsite locations to ensure no net loss of wetlands as a result of implementation of the Proposed Action.

Through avoidance, minimization combined with on- and off-site mitigation the Proposed Action will comply with Executive Order 11990.

A1-7 Comment noted.

Letter A2: California State Land Commission

A2-1 Comment noted.

A2-2 Comment noted.

A2-3 Comment noted. The USACE will contact the State Lands Commission contact provided in the comment to determine leasing requirements.

A2-4 Comment noted.

A2-5 The comment summary of the Proposed Action is correct.

A2-6 The State Lands Commission will be provided a copy of the Final Identification and Evaluation Report and Monitoring and Discovery Plan along with proof of the State Historic Preservation Officer concurrence once that has been received by the USACE and CVFPB.

A2-7 The ARCF Historic Properties Management Plan (HPMP) and ARCF Programmatic Agreement (PA) describe the procedures that will be followed by the USACE and CVFPB in case any cultural resources are discovered during the construction the proposed action, including coordination with the land owner. Mitigation Measures CR-2 and CR-4 on pages 3-96 and 3-97 in Chapter 3, *Affected Environment and Environmental Consequences* refer to and rely on these documents.

The USACE and CVFPB are aware that title to all archaeological sites, and historic or cultural resources are vested in the landowner, which for submerged lands of California is the State, under the jurisdiction of the California State Lands Commission (the Project Area does not include any tide lands).

Further, the USACE and CVFPB are also aware that the final disposition of archaeological, historical, and paleontological resources recovered must be approved by the California State Lands Commission. If during construction of the Proposed Action any cultural resources are discovered on State lands, the California State Lands Commission's staff attorney will be contacted. The USACE and CVFPB appreciate that the Commission has provided contact information for their attorney for this purpose. There is no need to revise the mitigation measures to cite the Public Resources Code.

A2-8 Analysis of the Proposed Action's greenhouse gas emissions on the environment were provided in Sections 3.9, *Air Quality*, and 3.10, *Greenhouse Gas Emissions and Energy Consumption* of the Draft SEIS/SIER. As described on pages 3-147 and 3-148, construction-related greenhouse gas (GHG) emissions would constitute a potentially significant climate change impact. However, the Proposed Action would increase the likelihood that the flood management system could accommodate future flood events that are expected to occur more frequently as a result of climate change and would improve the resiliency of the levee system with respect to changing climatic conditions, reducing exposure of property or persons to the effects of climate change. Further, the design of the Proposed Action accounts for erosion effects of river flows that are regulated upstream at Folsom Dam at a maximum rate of 160,000 cubic feet per second. These maximum flows are the result of recent improvements at the dam to increase flood storage and controlled releases of flows during storm events that are forecasted with future potential climate change events included in the design and operation of the dam. Nevertheless, because the Proposed Action would exceed SMAQMD GHG thresholds, climate change impacts would be significant. Implementation of Mitigation Measure GHG-1: Avoid, Minimize, and Compensate for Greenhouse Gas Emissions Effects, as described on pages 3-148 to 3-150, would reduce impacts attributed to increased GHG emissions to a less-than-significant level. See also response to comment A1-3.

A2-9 Comment noted.

Letter A3: City of Rancho Cordova

A3-1 Please see pages 2-48 to 2-53 for a description of the construction and maintenance of the Rossmoor East and West Mitigation Sites in Chapter 2, *Alternatives*. As described on page 3-112, access to the Rossmoor East and West Mitigation Sites in Rancho Cordova would be on Elmanto Drive. Construction of the Rossmoor East and West Mitigation Sites would not require heavy truck traffic as only one dozer for discing the sites will be needed, and smaller equipment will be stored in an onsite work storage container for use by field crews using hand tools or small motorized landscaping equipment (e.g., post-hole augers, weed-eaters, etc.). Further, operation and maintenance of the sites would be limited to vehicles with landscaping crews on an intermittent schedule.

Letter A4: Sacramento County Regional Parks at Public Meeting

A4-1 In response to the comment, USACE will update the www.sacleveeupgrades.com website and keep it up to date with information on the Proposed Action as new information becomes available.

Letter A5: Sacramento Metropolitan Air Quality Management District

A5-1 Comment noted.

A5-2 See page 2-35 in Chapter 2, *Alternatives* for a description of the bicycle trail removal and restoration within Site 2-3. Only the portions (approximately 3,500 linear feet) of the bicycle trail within Site 2-3 upstream from the J Street Bridge would be removed during construction and restored. During construction bicycle and pedestrian access would be available on the upper trail located in this section of Site 2-3. The USACE and CVFPB will coordinate with WALKSacramento and the Sacramento Area Bicycle Advocates to inform the public on construction schedule, safe bicycle/pedestrian relocation routes, detours, and trail reconstruction activities.

A5-3 The comment suggests removing language in Measure AQ-3 that is not applicable to the Proposed Action. To address this comment, the following text changes were made on page 3-120 of the Draft SEIS/SEIR:

> **Mitigation Measure AQ-3: Develop and Implement a Plan for Enhanced On-Site Exhaust Controls.** Actual emissions of nonattainment and maintenance pollutants would be tracked monthly using tools acceptable to SMAQMD (e.g., construction mitigation calculator, SMAQMD's Equipment List). USACE shall submit to SMAQMD a comprehensive inventory of all off-road construction equipment

(50 horsepower or more) to be used 8 hours or more during project construction. The tracking data would be used to verify that all pollutants remain below the CEQA daily thresholds, General Conformity de minimis thresholds, or are fully mitigated and offset if emissions exceed either.

The initial report would include all the following details:

- Information about the project information and the construction company.
- The equipment type, horsepower rating, engine model year, projected hours of use, and CARB equipment identification number for each piece of equipment in the plan.
- All owned, leased, and subcontracted equipment to be used. Updated reports would be submitted monthly to demonstrate continued project compliance. SMAQMD may conduct periodic site inspections to determine compliance. Nothing in this mitigation would supersede other air district, state, or federal rules or regulations.

~~Mitigation Measure AQ-3 will sunset on January 1, 2028, when full implementation of the CARB In-Use Off-Road Regulation is expected.~~

A5-4 The comment requests that clarification be added to explain how construction-related air emissions would be reduced. To address this comment, the following text changes were made to page 3-137 of the Draft SEIS/SEIR:

Summary

Implementation of the mitigation measures contained in the ARCF GRR FEIS/EIR would reduce construction-generated NOX emissions to a less-than-significant level that would not result in adverse health effects (as was shown in the HRA). In addition, with incorporation of dust control measures, PM (fugitive dust) emissions would be further reduced (i.e., by up to 75 percent) and would not exceed applicable SMAQMD thresholds or result in adverse health effects. The application of BMPs combined with engagement in SMAQMD's NOX mitigation fee program <u>or offsets obtained through purchase or loan</u> would be sufficient to reduce emissions to zero, in accordance with the Clean Air Act for projects that exceed de minimis levels, and consequently below SMAQMD's recommended daily mass emissions threshold of 85 lb/day. Emissions of ROG, PM10, and PM2.5 would additionally be reduced through the application of the mitigation measures. As discussed in the General Conformity Determination, included in Appendix F, the project would be in conformity with the Clean Air Act and would not cause or contribute to a new violation, nor increase the frequency or severity of existing violations of the NAAQS. Based on the conformity analysis, no exceedance of the de

minimis thresholds in 2022 would occur. Construction-related air quality impacts would be less than significant with mitigation.

A5-5 The comment requests additional explanation regarding timing for implementing Mitigation Measure GHG-1 be added to the SEIS/SEIR. To address this comment, the following text changes were made to page 3-150 of the Draft SEIS/SEIR:

> Purchase carbon offsets for program-wide GHG emissions (direct plus indirect emissions from on-road haul trucks plus commute vehicles) that meet the criteria of being real, quantifiable, permanent, verifiable, enforceable, and additional, consistent with the standards set forth in Health and Safety Code section 38562, subdivisions (d)(1) and (d)(2). Such credits shall be based on protocols approved by the California Air Resources Board (CARB), consistent with Section 95972 of Title 17 of the California Code of Regulations, and shall not allow the use of offset projects originating outside of California, except to the extent that the quality of the offsets, and their sufficiency under the standards set forth herein, can be verified by USACE or the Sacramento Metropolitan Air Quality Management District (SMAQMD). Such credits must be purchased through one of the following: (i) a CARB-approved registry, such as the Climate Action Reserve, the American Carbon Registry, and the Verified Carbon Standard; (ii) any registry approved by CARB to act as a registry under the California Cap and Trade program; or (iii) through the California Air Pollution Control Officers Association's (CAPCOA's) GHG Rx and SMAQMD. Purchase of carbon offsets ~~that~~ shall be sufficient to reduce the Proposed Action's GHG emissions to ~~and~~ below SMAQMD's significance thresholds applicable ~~at the time~~ prior to the start of construction through a one-time purchase of credits, according to SMAQMD's timing requirements, based on the emissions estimates in this SEIS/SEIR or on an ongoing basis based on monthly emissions estimates that would be prepared in accordance with procedures established by Measure AQ-3.

A5-6 Comment noted.

Letter A6: Sacramento County Regional Parks

A6-1 The comment summary of the Proposed Action is correct. Comment noted.

A6-2 The Project Partners will continue to coordinate with Regional Parks, through the Bank Protection Working Group, as well as with Regional Parks' planning efforts to align the long-term approach to mitigation in the American River Parkway between the ARCF Project and the Parkway Plan.

A6-3 Comment noted. See the following responses to comments.

A6-4 The USACE will continue to provide the Parkway users, stakeholders, and surrounding community with updates and notifications using the media and methods described in the comment. In addition to signage for closures and detours, USACE will post signage with a description of the Proposed Action in several locations within entrances to the Parkway. All signage will have contact information for the USACE Public Affairs Office for any further requests for information on the Proposed Action.

A6-5 Trail detours, including detour trail surface treatments, will be developed in consultation with Regional Parks staff, in addition to the City of Sacramento Bicycle and Pedestrian Coordinator.

A6-6 The comment requests that impacts to the Parkway equestrian/hiking trail be considered in the Draft SEIS/SEIR. As described on page 3-161 in Section 3.12, *Recreation* of the Draft SEIS/SEIR, existing conditions previously described in Section 3.14 of the 2016 ARCF GRR FEIS/FEIR were incorporated by reference. The 2016 ARCF GRR FEIS/FEIR considered the designated equestrian/hiking trail in the analysis of impacts on recreationists. While reference is made in Section 3.12, *Recreation* of the Draft SEIS/SEIR of the designated equestrian/hiking trail as a "horse trail" in several locations, all impacts to recreation within the Parkway are considered using general terminology to cover all recreational uses, including horseback riding and hiking.

A6-7 The comment is correct that the Caltrans SAC-51 American River Bridge Deck Replacement (Caltrans SAC-51) Project is in the regional cumulative context to be located along the lower American River near to the Proposed Action. Therefore, the Caltrans SAC-51 project has been added to the list of projects in Chapter 4, *Cumulative and Growth-Inducing Effects* of the Draft SEIS/SEIR. The addition of the Caltrans SAC-51 project to the list of cumulative projects does not change the significance conclusions in the analysis of cumulative effects on pages 4-9 to 4-16 of the Draft SEIS/SEIR. The following text has been added to Chapter 4, *Cumulative and Growth-Inducing Effects* of the Draft SEIS/SEIR to address this comment:

4.1.1.16 Caltrans SAC-51 American River Bridge Deck Replacement Project

Caltrans proposes to rehabilitate the American River Bridge along State Route (SR) 51/Business Intestate 80 in Sacramento County. The project would remove and replace the existing concrete deck, remove and replace the steel girder post-tensioning systems, modify the existing soundwall, install sheet piling around piers for scour mitigation, construct concrete catcher blocks, widen the bridge to accommodate traffic during construction, add a Class I bike/pedestrian path, and plan for future

transportation needs on SR 51. The purpose of the project is to replace the deck on the American River Bridge on SR 51 in Sacramento County, prevent scour, and provide a multimodal connection between downtown and eastern Sacramento and plan for future transportation needs. The proposed work would repair, protect, and extend the service life of the deck. Construction, road construction, and construction traffic associated with Caltrans SAC-51 project have the potential to contribute to cumulative impacts with the Proposed Action.

A6-8 The USACE will conduct a mitigation sites alternatives analysis for sites that could provide mitigation for impacts of Alternative 2 of the ARCF GRR EIS/EIR on salmonid habitat in the American River Parkway consistent with the process outlined in the *Draft Natural Resource Management Plan for the American River Parkway*. When the analysis has been drafted it will be shared with Sacramento County Regional Parks. The analysis will consider the salmonid habitat values of various alternative mitigation sites in the American River Parkway and will also assess impacts of implementing the mitigation alternatives on habitats of native wildlife species (including birds) and recreation. The Arden Pond Mitigation Site construction has been placed on hold pending the outcome of the mitigation sites alternatives analysis and further coordination with Sacramento County Regional Parks and the Bank Protection Working Group. If the alternatives analysis leads to substantive changes to the design of the Arden Pond Mitigation Site, additional analysis for NEPA and/or CEQA compliance may be needed in a supplemental environmental document.

A6-9 The mitigation sites alternatives analysis (see response to Comment A6-8) will consider impacts of implementing salmonid mitigation sites and other habitat categories as well as impacts on recreation.

A6-10 The waterfowl impacts and associated recreation impacts of implementing the Proposed Action at the Arden Pond Mitigation Site are discussed in responses to comments O2-1 to O2-8.

A6-11 The USACE will update the Operations and Maintenance Manual (O&M Manual) for the American River levees to continue the proper functioning of this part of the Sacramento River Flood Control Project based on the revised design of the erosion protection sites. Long-term management of on- and off-site mitigation sites will follow the LTMPs that USACE is developing for all on- and off-site mitigation as updates to the HMMAMP of the ARCF Project (Appendix I of ARCF GRR Final EIS/EIR) to ensure that the success criteria for the mitigation will be met, and to comply with the BOs. See response to Comment A1-3.

Letter A7: Sacramento Municipal Utility District

A7-1 Comment noted.

A7-2 As described in Section 3.13, *Public Utilities and Service Systems* on page 3-168 of the Draft SEIS/SEIR, analysis of potential adverse effects to existing utility infrastructure, including overhead electrical lines and buried infrastructure was evaluated in Section 3.16 of the ARCF GRR FEIS/FEIR (pages 317 through 323). Existing utilities impacted within the project footprint that are functional and operational would be relocated as necessary. Mitigation Measure UTIL-1: Avoid and Minimize Service Disruptions and Damage to Utilities and Infrastructure on page 3-170 of the Draft SEIS/SEIR would ensure that before construction begins, measures would be implemented to avoid and minimize potential damage to utilities and infrastructure, including electrical overhead and/or underground transmission and distribution lines, and to reduce service disruptions during construction. As further described in Mitigation Measure UTIL-1, all applicable utility and service providers would be coordinated with to implement the orderly relocation of utilities that need to be removed or relocated.

Related to electrical load needs and energy efficiency, as described on pages 3-147 to 3-148 in Section 3.10, *Greenhouse Gas Emissions and Energy Consumption* of the Draft SEIS/SEIR, implementation of the Proposed Action would result in an increase in fuel consumption as compared to baseline conditions. The analysis concluded that construction-related fuel consumption would be met through existing fueling infrastructure and would not be considered wasteful, inefficient, or unnecessary. Furthermore, the Proposed Action would not prevent the implementation of goals, policies, or actions contained in a plan to increase renewable energy usage or improve energy efficiency. The Proposed Action involves construction and maintenance of a project that would not generate operational electricity demand. Therefore, energy-related impacts would be less than significant. See responses to comments A1-3 and A2-8 regarding hydrology and climate change impacts.

Cumulative impacts are addressed in Chapter 4, *Cumulative and Growth Inducing Effects* of the Draft SEIS/SEIR. Specifically, cumulative energy use is described in Section 4.2.9, *Greenhouse Gas Emissions and Energy Consumption*; and potential disruption to utilities is described in Section 4.2.12, *Public Utilities and Service Systems*. In both cases, the Proposed Action would not result in a considerable incremental contribution to a significant cumulative effect.

A7-3 This comment is noted. As explained in response A7-2, USACE would coordinate with all applicable utility and service providers in order to ensure the orderly relocation of utilities that need to be removed or relocated. USACE is currently working with SMUD to obtain maps of all existing utilities and will continue to

coordinate with SMUD on maintaining all safety clearances and on any relocations required for construction.

A7-4 Comment noted. See response to comment A7-3.

A7-5 Comment noted. See response to comment A7-3.

Letter A8: City of Sacramento Department of Public Works Transportation Division

A8-1 See pages 2-56 to 2-61 in Chapter 2, *Alternatives* of The Draft SEIS/SIER for a description of the construction considerations for the Proposed Action addressing haul routes and access roads, rerouting pedestrian and bicycle trails, and installing signage for traffic and alternate transportation routes. In addition, see pages 3-113 to 3-120 in Section 3.8, *Transportation and Circulation* of the Draft SEIS/SEIR for the analysis of the Proposed Actions impacts on traffic and circulation. Mitigation Measure TR-1: Prepare and Implement a Traffic Control and Road Maintenance Plan on pages 3-119 and 3-120 would address the concerns in the comment. Further, USACE will coordinate with the City of Sacramento Department of Public Works Transportation Division contact as requested in the comment. See also response to comment A5-2.

A8-2 See response to comment A8-1. The USACE will coordinate with the City of Sacramento to ensure that the traffic control and maintenance plan includes the information listed in the comment. In response to the comment, the following text changes have been made to Mitigation Measure TR-1 in Section 3.8, *Transportation and Circulation*:

> **Mitigation Measure TR-1: Prepare and Implement a Traffic Control and Road Maintenance Plan.** Before the start of project-related construction activities, USACE and the CVFPB would require the contractor to prepare a Traffic Control and Road Maintenance Plan. This plan would describe the methods of traffic control to be used during construction. All on-street construction traffic would be required to comply with the local jurisdiction's standard construction specifications. The items listed below would be included in the plan and as terms of the construction contracts:
>
> - The contractor would be required to prepare a Traffic Control and Road Maintenance Plan. A traffic control plan describes the methods of traffic control to be used during construction. All on-street construction traffic would be required to comply with the ~~local jurisdiction~~ City of Sacramento's standard construction specifications as detailed in City Code 12.20.030 to the satisfaction of the City Traffic Engineer. The plan would reduce the effects of construction on

the roadway system in the Project Area throughout the construction period.

- Construction contractors would follow the standard construction specifications of affected jurisdictions and obtain the appropriate encroachment permits, if required. The conditions of the encroachment permit would be incorporated into the construction contract and would be enforced by the agency that issues the encroachment permit.
- Proposed lane closures would be coordinated with the appropriate jurisdiction and would be minimized to the extent possible during the morning and evening peak traffic periods.
- Standard construction specifications also typically limit lane closures during commuting hours. Lane closures would be kept as short as possible. If a road must be closed, detour routes and/or temporary roads would be made to accommodate traffic flows. Detour signs would be provided to direct traffic through detours. Advance notice signs of upcoming construction activities would be posted at least 1 week in advance so that motorists are able to avoid traveling through the study area during these times. Within the Parkway, detours would be used to allow for continued use by bicycle commuters.
- Safe pedestrian and bicyclist access would be maintained around the construction areas at all times. Construction areas would be secured as required by the applicable jurisdiction to prevent pedestrians and bicyclists from entering the work site, and all stationary equipment would be located as far away as possible from areas where bicyclists and pedestrians are present.
- The construction contractor would provide adequate parking for construction trucks, equipment, and construction workers within the designated staging areas throughout the construction period. If inadequate space for parking is available at a given work site, the construction contractor would provide an off-site staging area and, as needed, coordinate the daily transport of construction vehicles, equipment, and personnel to and from the work site.
- The construction contractor would assess damage to roadways used during construction and would repair all potholes, fractures, or other damages.
- The construction contractor would notify and consult with emergency service providers <u>at least 14 days prior to commencement of construction that would partially or fully obstruct roadways</u> to <u>ensure that alternative</u> ~~maintain~~ emergency access <u>routes are established</u> ~~and~~ <u>to</u> facilitate the passage of emergency vehicles on city streets.

- Emergency vehicle access would be made available at all times. The contractor would be required to coordinate with local emergency responders to inform them of the construction activities.

A8-3 Comment noted. The USACE will provide copies of any updated information regarding the Proposed Action.

Letter O1: Central Valley Bird Club (SARA)

O1-1 The comment summary of the Proposed Action is correct. Comment noted.

O1-2 The Urrutia property is not a part of the Proposed Action analyzed in the Draft Supplemental EIS/EIR. A mitigation sites alternatives analysis will be conducted by the USACE that will identify the most appropriate sites for shaded riverine aquatic (SRA) habitat mitigation for the ARCF erosion protection work (see response to Comment A6-8). SRA habitat distributed throughout the study area is beneficial to juvenile salmonids. Juvenile salmonids use the habitat as they migrate down the river to avoid predators and to feed. One large patch of SRA habitat has lower habitat value than several smaller patches of the same combined size distributed throughout the study area. At this time, the total impact of all ARCF American River erosion protection sites to SRA habitat and the corresponding amount of habitat mitigation required are still unknown, because several erosion protection site are still being designed.

O1-3 Impacts of the Proposed Action to migratory birds are addressed in section *MBTA-Protected Birds California Fish and Game Code Subsections 3503 and 3503.5* of the Draft SEIS/SEIR on pages 3-69 - 3-70, and section *Other Breeding and Migratory Birds* of the Draft SEIS/SEIR on page 3-80. Impacts were considered less than significant with implementation of Mitigation Measure BIRD-1.

It is noted that Arden Pond provides resting habitat for water birds, which may be reduced by a reduction in the open water area of the pond. Water bird resting habitat will remain at the site, and other areas with open water habitat are also available in the American River Parkway. Recreational and educational opportunities will remain in the reconfigured pond, and other opportunities for recreation (such as bird watching) and education will be created by the restoration of a natural channel and native riparian habitat that will benefit special-status salmonid species and other native wildlife within the American River Parkway. Also see Response to Comment A6-8 regarding USACE's commitment to conduct a mitigation site alternatives analysis.

O1-4 See responses to Comments O1-2 and A6-8.

O1-5 See response to Comment A6-8.

Letter O2: Save the American River Association

O2-1 Initially, concerns about the use of Arden Pond as a mitigation area were provided in a letter from Daniel Airola, Conservation Chair of the Central Valley Bird Club, to Dianna Poggetto, Chair of the American River Parkway Advisory Committee, and Liz Bellas, Director of the Sacramento County Regional Parks, dated April 2, 2021. In response, the USACE provided a memorandum prepared by Daniel Williams of HDR, addressed to Dan Tibbitts of SAFCA, and Melanie Tymes of USACE, dated June 1, 2021. The same issues addressed in Mr. Airola's original letter are addressed in more depth in the letter provided to the Save the American River Association (SARA) on June 11, 2021 and provided by SARA as comments on the Draft Supplemental EIS/EIR to the USACE.

O2-2 The comment is noted as addressing a memorandum prepared by Mr. Williams, and not as addressing the analysis in the Draft SEIS/SEIR. However, the Central Valley Bird Club's concerns about the Proposed Action are addressed in the responses to comments O2-3 to O2-8.

O2-3 Please see the response to Comment O1-3.

The responses to the following comments address the specific concerns raised of: (1) change in pond size and configuration (O2-4); (2) increased human disturbance by bass anglers (O2-5); (3) ancillary impacts of encouraging more bass angling (O2-6); and (4) effects on the heron and egret rookery (O2-7).

O2-4 Please see responses to Comments A6-8 and O1-3. The potential bird habitat impacts of implementing salmonid mitigation at Arden Pond and other sites will be addressed in the Corps' mitigation sites alternatives analysis.

However, it should be noted that the reduction in open water at the Arden Pond Mitigation Site would reduce habitat area for water birds at Arden Pond, although, as is stated in the letter, how much use water birds make of other ponds in the area is unclear. Pond habitat is certainly available in the American River Parkway, including at Sacramento Bar, and large areas of slow-moving water are available in backwaters and side channels upstream and downstream from Arden Pond in this historically heavily mined area. The same species reported at Arden Pond have also been reported in these other areas of the American River Parkway; however, no quantitative data is available. In addition, some of the water-bird species listed in the letter would make use of the natural habitat that would be created by the restoration of riparian and wetland habitat, such as wood ducks, while many other bird species would benefit from the increased riparian habitat area for foraging and nesting (e.g., tree swallows, spotted towhees, ash-throated flycatchers, etc.).

O2-5 Comment noted. There is no evidence that implementing the Arden Pond Mitigation Site would increase the recreational use of the reconfigured pond for bass fishing.

O2-6 There is no evidence that implementing the Proposed Action would encourage or increase bass fishing. The Proposed Action does not include improvements to the boat ramp. See response to comment O2-5.

O2-7 The heron and egret rookery is at least 200 feet from any area with disturbance related to implementation of the Arden Pond Mitigation Site (including haul routes). The heron and egret rookery referenced in the comment would not be impacted by construction. Impacts from disturbance related to construction would be avoided or minimized by implementation of Mitigation Measure Bird-1. For construction activities that cannot be avoided during the nesting season for heron and egret rookeries (see Table 3-6), a buffer distance of at least 200 feet would be observed (see Table 3-7).

Reduction of the pond size should not substantially reduce foraging opportunities for great blue herons and great egrets. These species are frequently observed foraging in shallow water along the river channel's edges and in backwaters and side channels, especially in marshy habitat created by the Proposed Action. Foraging opportunities not associated with Arden Pond Mitigation Site are abundant in the vicinity of the rookery.

O2-8 See response to comments A6-8 and O1-3. The USACE will conduct a mitigation sites alternatives analysis for sites that could provide mitigation for impacts of Alternative 2 of the ARCF GRR EIS/EIR on salmonid and SRA habitat in the American River Parkway consistent with the process outlined in the *Draft Natural Resource Management Plan for the American River Parkway*. The alternatives analysis will consider Arden Pond and the concerns about birds raised by this comment. Until those results are available the construction of the Arden Pond Mitigation Pond will be put on hold.

Letter O3: Save the American River Association

O3-1 The on-site habitat impacts, and on-site habitat mitigation are shown in Table 3-3A on pages 3-33 and 3-34 of the Draft SEIS/SEIR. Habitat acreages to be created at the Arden Pond Mitigation Site are shown in Table 3-3B on pages 3-35 and 3-36 of the Draft SEIS/SEIR. The area of habitat to be created at the Rossmoor East and Rossmoor West mitigation sites is shown in Table 2-4 on page 2-48 of the Draft SEIS/SEIR. At sites 2-2 and 2-3, 18.46 acres of riparian habitat would be removed and 15.76 acres would be created on-site. At the three mitigation sites, an additional net 21.16 acres of riparian habitat would be created off-site, as stated on pages 3-32, 3-37, and 3-42 of the Draft SEIS/SEIR. Further, the USACE is required by the BOs to report impacts and mitigation annually to

USFWS and NMFS. The USACE will also remain involved with the American River Task Force as directed by the BOs. The USACE will share information from these reports with the Task Force.

The following text has been changed to clarify and augment information on the impact and mitigation acreages due to minor modifications of the footprint of the Proposed Action.

Page 3-32 of the Draft SEIS/SEIS has been revised as follows:

> Under the Proposed Action, impacts from construction activities to install exposed and buried rock structures, and a planting bench at Site 2-2 would include the loss of 1.39 acres of riparian woodland and 0.11 acre of riparian scrub in the footprint of the Project Area (**Table 3-3a**). Riparian habitat would also be damaged and removed within construction access areas and haul routes, resulting in removal of ~~0.48~~ 0.44 acre of riparian woodland and 0.04 acre of riparian scrub habitat.
>
> At Site 2-3, the Proposed Action includes a cut bank design with large planting benches and addition of IWM, transverse rock structures, launchable rock trench located along 170 feet of bankline below the H Street Bridge, and a new riprap channel which would replace a portion of an existing concrete storm drain channel. These activities would result in the loss of ~~9.63~~ 9.64 acres of riparian woodland and ~~4.89~~ 4.88 acre of riparian scrub in the footprint of the Project Area (Table 3-3). Riparian habitat would also be impacted within construction access areas and haul routes, resulting in removal of 1.74 acre of riparian woodland and 0.22 acre of riparian scrub habitat. In addition, reconstruction of the Campus Commons Golf Course would remove 22 trees, the majority of which are…

The following text has been changed on page 3-37 of the Draft SEIS/SEIS has been revised as follows:

> ***Anticipated Effects on Wildlife***
>
> As described in Section 3.6, *Special Status Species*, riparian vegetation along the lower American River provides habitat for the valley elderberry longhorn beetle (VELB). The riparian corridor is also considered to be suitable stop-over habitat for the western yellow-billed cuckoo. To mitigate the impacts on habitat for these species, USACE would create replacement riparian habitat at ratios of 3:1 (acres replaced to acres affected) and 2:1, respectively. A total of ~~15.11~~ 16.02 acres of riparian habitat would be affected at Sites 2-2 and 2-3 erosion protection areas and up to an additional ~~2.47~~ 2.44 acres in the construction access areas and haul routes. Some of the riparian habitat in access areas may be avoided, if

feasible. To mitigate these impacts to Sites 2-2 and 2-3, USACE would create a total of ~~51.63~~ 36.92 acres of riparian habitat, which would include ~~19.31~~ 15.76 acres of on-site riparian habitat in the Project Area. In addition, ~~32.32~~ 21.16 acres of off-site riparian habitat would be created at off-site locations including, but not limited to Rio Americano East and West, Rossmoor East and West, and at Arden Pond (see Section 3.6, *Special Status Species*). An additional 14.59 acres of riparian and VELB habitat will be created to compensate for impacts to VELB habitat at Arden Pond, for a total of 51.51 acres of created riparian habitat. Further, the Proposed Action would affect 4.86 acres of non-native grassland in the Project Area. Non-native grassland would be replaced with 4.20 acres of native grassland, which is a ratio of 0.86:1, but represents a much higher habitat value than non-native grassland. A total of 4.05 acres of non-native grassland would be disturbed in the access and staging areas. This area would be restored after construction by seeding native grassland plant species in this area.

Page 3-38 of the Draft SEIS/SEIS has been revised as follows:

Riparian woodland present within Subreach 2 is considered a sensitive natural community. A total of ~~19.31~~ 15.76 acres would be created within Sites 2-2 and 2-3 and ~~32.32~~ 35.75 acres would be created off-site (at locations described in Section 2.3.3 *Mitigation Sites*) to address impacts on VELB and western yellow-billed cuckoo habitat at a 3:1 and 2:1 ratio, respectively. The Proposed Action would result in a net increase in riparian woodland (including forested wetland) acreage within and near the Project Area. State and Federally protected wetlands and other jurisdictional waters are also considered to be protected sensitive natural communities and have been included in the impacts and mitigation described above in this paragraph. Based on the design of the Proposed Action, this riparian habitat (including forested wetland) would be replaced with ~~10.08~~ 9.31 acre of riparian habitat located below the OHWM (Table 3-3). Additional off-site riparian habitat would be created at Arden Pond and if needed additional mitigation sites in the American River Parkway that would be selected and designed in coordination with NMFS and USFWS as part of the consultation under the Endangered Species Act and that would be located below the OHWM (See SRA-1 for additional discussion). No additional mitigation for impacts on jurisdictional waters is proposed. Given the above considerations, the impact of the project on sensitive natural communities, including riparian habitat and wetlands and other waters under State and Federal jurisdiction, would be less than significant with mitigation.

Page 3-42 of the Draft SEIS/SEIS has been revised as follows:

> In summary, to address the impacts on the ~~17.97~~ 18.46 acres of riparian habitat (including forested wetland below OHWM) that would be affected by the Proposed Action at Sites 2-2 and 2-3, replacement riparian habitat would be created, including ~~19.31~~ 15.76 acres on site and ~~32.32~~ 35.75 acres off site. For temporary impacts to 39 acres of riparian habitat (including forested wetland below the OHWM) at the Arden Pond Mitigation Site, approximately 22 acres of riparian habitat (16 acres above the OHWM and 6 acres below the OHWM) would be restored to better than pre-project conditions. Additional riparian habitat will be planted in previously disturbed areas creating a net gain of riparian habitat. Implementing this compensatory mitigation would reduce long-term impacts on any natural community or wildlife habitat within the Project Area to a less-than-significant level by creating on-site and off-site riparian habitat. Short-term impacts on vegetation and wildlife habitat would remain significant and unavoidable, because it would take several years (e.g., 10 to 15 years) for riparian habitat to become fully mature and provide the same values as existing riparian habitat.

Page 3-76 of the Draft SEIS/SEIS has been revised as follows:

> ***Valley Elderberry Longhorn Beetle***
>
> Construction would directly affect ~~1.07~~ 1.04 acres of VELB habitat at Site 2-2 and ~~8.64~~ 8.63 acres at Site 2-3. An additional 7.50 acres would be impacted at the Arden Pond Mitigation Site during the construction. These areas include the shrub and the riparian habitat within 25 meters (82 feet), which is considered VELB habitat. The impact of this loss of Federally listed species habitat would be significant. The impact would be reduced to a less-than-significant level with implementation of Mitigation Measure VELB-1, which would include creating ~~51.63~~ 51.51 acres of on-site and off-site VELB habitat. The affected shrubs would be transplanted to one of the approved elderberry shrub mitigation sites: Rio Americano West, Rio Americano East or the Rossmoor East Mitigation Sites or other elderberry shrub mitigation sites in the LAR as described in Chapter 2, *Alternatives*.

Page 3-77 of the Draft SEIS/SEIS has been revised as follows:

> ***Western Yellow-Billed Cuckoo***
>
> As described in the Proposed Action effects discussion in Section 3.8.4 (page 167) of the ARCF GRR FEIS/FEIR, the Project Area is unlikely to support nesting western yellow-billed cuckoos because the riparian corridor is narrow, patchy, and frequented by park visitors. Construction of Sites 2-2 and 2-3 would result in the loss of ~~18.62~~ 18.46 acres of riparian habitat (Table 3-3). The construction of Arden Pond Mitigation

Site would result in the temporary loss of approximately 30 acres of riparian habitat. This loss of habitat would be a significant impact. With implementation of Mitigation Measures VELB-1, VEG-1, VEG-2, and BIRD-1, the impact would be reduced to a less-than-significant level.

Swainson's Hawk

As described in Section 3.8.4 (page 168) of the ARCF GRR FEIS/FEIR, the Project Area possesses suitable roosting and nesting habitat for Swainson's hawk. Project construction could affect the riparian habitat used by this species for roosting and nesting. Although the removal of riparian trees would be mitigated through compensatory plantings, there would be a temporal loss of habitat until the newly planted trees could become established and mature. Long-term effects on Swainson's hawk nesting habitat could result from the loss of riparian habitat in the Project Area as follows: 1.50 acres at Site 2-2 and ~~14.75~~ 14.52 acres at Site 2-3 for erosion protection efforts, and ~~0.52~~ 0.48 acres at Site 2-2 and 1.96 acres at Site 2-3 of riparian habitat within the access areas, haul routes, and staging areas. An additional 8 acres would be temporarily impacted within restoration areas and 22 acres of habitat within access areas and temporary work zones during restoration efforts at the Arden Pond Mitigation Site. This would be a significant impact on Swainson's hawk nesting habitat.

Page 3-89 of the Draft SEIS/SEIS has been revised as follows:

Transplanting

Affected elderberry shrubs with one or more stems measuring 1.0 inch or greater in diameter at ground level that could feasibly be transplanted in accordance with the 2017 Framework must be transplanted to a mitigation site as approved by USFWS. Elderberry compensation would be planted in the Parkway, but outside of the Project Area (off-site) because of construction timing. USACE would find areas in the Lower American River Parkway to either expand existing compensation areas or provide connectivity between areas of conserved VELB habitat. Sites within the Lower American River Parkway would be coordinated with the Sacramento County Department of Regional Parks and USFWS during the design phase of the project. Sites would be designed and developed in accordance with the criteria listed below before any effects on VELB habitat.

For impacts on VELB habitat at Site 2-2 (~~1.07~~ 1.04 acres), Site 2-3 (~~8.64~~ 8.63 acres), and the Arden Pond Mitigation Site (7.50 acres), USACE would mitigate at a 3:1 ratio and create a total of ~~51.63~~ 51.51 acres of VELB and riparian habitat off-site. The elderberry shrubs that would be affected would be transplanted to either the Rio Americano West Mitigation Site, the Rio Americano East Mitigation Site, or Rossmoor East

Mitigation Site. These sites would be used for the transplantation and compensation for impacts on elderberry shrubs as described in the *Compensatory Mitigation* section below.

O3-2 All tree plantings for golf course reconstruction will be from the County's list of species approved for planting on the American River Parkway, as is stated on page 2-55 in Chapter 2, *Alternatives* of the Draft SEIS/SEIR: "Following completion of the golf course construction, as part of this phase of the restoration, approximately 40 trees from the preferred planting lists established by the County would be planted throughout the course.

O3-3 See responses to Comments A6-8 and O1-3.

O3-4 Numerous islands exist within the American River Parkway that are of various sizes and support a range of vegetation types. The USACE is conducting a mitigation site alternatives analysis for salmonid habitat mitigation sites (including Arden Pond) that includes an assessment of impacts of the potential mitigation sites on habitats other than those for salmonids, including island habitat (see response to Comment A6-8). The USACE will continue to work with the USFWS and NMFS on the designs of those sites. If selected, those sites will be subject to additional NEPA/CEQA analysis. The Arden Pond Mitigation Site construction contract has been placed on hold pending the outcome of the mitigation sites alternatives analysis.

Letter I1: Betty Cooper

I1-1 The comment expresses opposition to the Proposed Action. The comment does not address the content or adequacy of analysis in the Draft SEIS/SEIR. Comment noted.

I1-2 Impacts on biological resources, including bird species, were analyzed in Sections 3.2, *Vegetation and Wildlife* and 3.6, *Special Status Species*. See responses to Comments A6-8 and O1-3 which refer to the mitigation sites alternatives analysis being prepared by the USACE.

I1-3 Impacts on biological resources, including bird species, were analyzed in Sections 3.2, *Vegetation and Wildlife* and 3.6, *Special Status Species*. See response to Comment O2-4. The Proposed Action would not create a bicycle or walking trail within the Arden Pond Mitigation Site. Existing Arden Pond recreation uses include non-motorized boating, fishing, walking, swimming, wildlife viewing, and picnicking. Current use of the Parkway allows on-leash dogs only and the Proposed Action would not encourage or otherwise result in an increase in dog walking in the Arden Pond area.

I1-4 Comment noted. The Proposed Action would remove only those trees that are in the footprint of construction activities. As described on pages 2-7 to 2-35, the Proposed Action would plant trees and other native vegetation along Sites 2-2 and 2-3, and within the Arden Pond Mitigation Site to create shaded riverine aquatic habitat for juvenile salmonids and habitat for other endangered species and wildlife in the Parkway. Impacts of tree removal were analyzed in Section 3.4, *Vegetation and Wildlife* in the Draft SEIS/SEIR and were found to be less than significant with implementation of Mitigation Measures VEG-1 and VEG-2 on pages 3-40 and 3-41. Additionally, the purpose of the Proposed Action is to reduce erosion risk and subsequent levee failure along the Lower American River. Implementing the erosion protection measures described in the Proposed Action will increase riverbank stability and reduce erosion risk during high water events when compared to existing conditions.

I1-5 See responses to Comments A6-8 and O1-3 which refer to the mitigation sites alternatives analysis being prepared by the USACE.

Appendix J

Revisions to the Draft Supplemental Environmental Impact Statement/ Environmental Impact Report

This appendix presents corrections and revisions made to the Proposed Action's Draft Supplemental Environmental Impact Statement/Environmental Impact Report (Supplemental EIS/EIR). This appendix does not identify administrative changes to the Supplemental EIS/EIR text which do not affect the analysis contained in the Supplemental EIS/EIR (for example, updates to the public review process). New text is indicated with an underline and text to be deleted is reflected by a ~~strike through~~. Text changes are presented in the page order in which they appear in the Supplemental EIS/EIR.

The changes identified below are clarifications or amplification of the information and analysis contained in the Supplemental EIS/EIR. None of the changes identified below results in a significant impact that was not already identified in the Supplemental EIS/EIR. Furthermore, none of the impacts identified in the Supplemental EIS/EIR were found to be substantially more severe as the result of the following changes. For these reasons, recirculation of the Supplemental EIS/EIR is not warranted.

Chapter 1, Introduction

The following text change on page 1-2 in Section 1.1.2, *Summary of the Proposed Action*, has been revised as follows:

> The Proposed Action in this document consists of: (1) the installation of approximately ~~7,800~~ 8,148 linear feet of erosion protection and on-site riparian habitat features along two levee segments of the LAR (Sites 2-2 and 2-3); (2) creation of three off-site riparian habitat restoration sites (Arden Pond and two areas at Rossmoor Bar) for mitigation; (3) associated staging areas, stockpile sites, and haul routes; and (4) reconstruction of the Campus Commons Golf Course. All activities for the Proposed Action comprise the Project Area.

Chapter 2, Alternatives

The following text change on page 2-7 in Chapter 2, *Alternatives* of the Draft SEIS/SEIR reflects the current status of the NMFS and USFWS evaluation:

> **Biological Opinion Requirements:** Both the National Marine Fisheries Service (NMFS) and the U.S. Fish and Wildlife Service (USFWS) issued Biological Opinions (BOs) in 2015 for the ARCF GRR EIS/EIR. Both BOs include Conservation Measures, Reasonable and Prudent Measures, and Terms and Conditions. The potential effects of the Proposed Action on the species and/or their critical habitat originally covered in the BOs ~~are being~~ have been re-evaluated based on updated designs to ensure all aspects of the Proposed Action would not jeopardize the continued existence of species or adversely modify critical habitat. The USFWS BO was issued in March 2021 and the NMFS BO was issued in May 2021. Both BOs concluded that the Proposed Action would not jeopardize the continued existence of species or adversely modify critical habitat.

Chapter 3, Affected Environment and Environmental Consequences

The following text on page 3-26 in Section 3.4, *Vegetation and Wildlife* has been revised as follows:

> ***Wetlands and Other Waters***
>
> In July 2019, Environmental Science Associates biologists conducted an aquatic resources delineation for LAR Subreach 2. Subreach 2 is comprised of a total of 37.57 acres of potential waters of the United States: 22.43 acres of perennial riverine (i.e., American River), 15.04 acres of seasonally flooded forested wetlands that are comprised of a riparian woodland overstory and a riparian scrub understory, and 0.10 acres of drainage ditch (Appendix C). The term "forested wetlands" is used interchangeably in this Draft Supplemental EIS/EIR with the term "seasonally-flooded riparian habitat."

The following text has been changed on page 3-32 of the Draft SEIS/SEIS has been revised as follows:

> The analysis in the ARCF GRR FEIS/FEIR determined that constructing new bank protection features would involve removing grasses, shrubby vegetation, riparian woodland, and instream woody material, resulting in the loss of ~~4.24 acres~~ 80,825 linear feet of SRA habitat.

The following text has been changed on page 3-32 of the Draft SEIS/SEIS has been revised as follows:

> Under the Proposed Action, impacts from construction activities to install exposed and buried rock structures, and a planting bench at Site 2-2 would include the loss of 1.39 acres of riparian woodland and 0.11 acre of riparian scrub in the footprint of the Project Area (**Table 3-3a**). Riparian habitat would also be damaged and removed within construction access areas and haul routes, resulting in removal of ~~0.48~~ 0.44 acre of riparian woodland and 0.04 acre of riparian scrub habitat.
>
> At Site 2-3, the Proposed Action includes a cut bank design with large planting benches and addition of IWM, transverse rock structures, launchable rock trench located along 170 feet of bankline below the H Street Bridge, and a new riprap channel which would replace a portion of an existing concrete storm drain channel. These activities would result in the loss of ~~9.63~~ 9.64 acres of riparian woodland and ~~4.89~~ 4.88 acre of riparian scrub in the footprint of the Project Area (Table 3-3). Riparian habitat would also be impacted within construction access areas and haul routes, resulting in removal of 1.74 acre of riparian woodland and 0.22 acre of riparian scrub habitat. In addition, reconstruction of the Campus Commons Golf Course would remove 22 trees, the majority of which are ornamental trees planted for landscaping at the golf course. Two cottonwood trees and five box elder trees are remnants of the riparian system that existed prior to development but are no longer associated with the remaining riparian habitat.

The following text has been changed on pages 3-34 and 3-35 in Section 3.4, *Vegetation and Wildlife*:

The following text has been changed on page 3-37 of the Draft SEIS/SEIS has been revised as follows:

Anticipated Effects on Wildlife

As described in Section 3.6, *Special Status Species*, riparian vegetation along the lower American River provides habitat for the valley elderberry longhorn beetle (VELB). The riparian corridor is also considered to be suitable stop-over habitat for the western yellow-billed cuckoo. To mitigate the impacts on habitat for these species, USACE would create replacement riparian habitat at ratios of 3:1 (acres replaced to acres affected) and 2:1, respectively. A total of ~~15.11~~ 16.02 acres of riparian habitat would be affected at Sites 2-2 and 2-3 erosion protection areas and up to an additional ~~2.47~~ 2.44 acres in the construction access areas and haul routes. Some of the riparian habitat in access areas may be avoided, if feasible. To mitigate these impacts to Sites 2-2 and 2-3, USACE would create a total of ~~51.63~~ 36.92 acres of riparian habitat, which would include ~~19.31~~ 15.76 acres of on-site riparian habitat in the Project Area. In addition, ~~32.32~~ 21.16 acres of off-site riparian habitat would be created at off-site locations including, but not limited to Rio Americano East and West, Rossmoor East and West, and at Arden Pond (see Section 3.6, *Special Status Species*). An additional 14.59 acres of riparian and VELB habitat will be created to compensate for impacts to VELB habitat at Arden Pond, for a total of 51.51 acres of created riparian habitat. Further, the Proposed Action would affect 4.86 acres of non-native grassland in the Project Area. Non-native grassland would be replaced with 4.20 acres of native grassland, which is a ratio of 0.86:1, but represents a much higher habitat value than non-native grassland. A total of 4.05 acres of non-native grassland would be disturbed in the access and staging areas. This area would be restored after construction by seeding native grassland plant species in this area.

The following text has been changed on page 3-38 of the Draft SEIS/SEIS has been revised as follows:

Riparian woodland present within Subreach 2 is considered a sensitive natural community. A total of ~~19.31~~ 15.76 acres would be created within Sites 2-2 and 2-3 and ~~32.32~~ 35.75 acres would be created off-site (at locations described in Section 2.3.3 *Mitigation Sites*) to address impacts on VELB and western yellow-billed cuckoo habitat at a 3:1 and 2:1 ratio, respectively. The Proposed Action would result in a net increase in riparian woodland (including forested wetland) acreage within and near the Project Area. State and Federally protected wetlands and other jurisdictional waters are also considered to be protected sensitive natural communities and have been included in the impacts and mitigation described above in this paragraph. Based on the design of the Proposed Action, this riparian habitat (including forested wetland) would be replaced with ~~10.08~~ 9.31 acre of riparian habitat located below the OHWM (Table 3-3). Additional off-site riparian habitat would be created at Arden Pond and if needed additional mitigation sites in the American River Parkway that would be selected and

designed in coordination with NMFS and USFWS as part of the consultation under the Endangered Species Act and that would be located below the OHWM (See SRA-1 for additional discussion). No additional mitigation for impacts on jurisdictional waters is proposed. Given the above considerations, the impact of the project on sensitive natural communities, including riparian habitat and wetlands and other waters under State and Federal jurisdiction, would be less than significant with mitigation.

The following text has been changed on page 3-42 of the Draft SEIS/SEIS has been revised as follows:

In summary, to address the impacts on the ~~17.97~~ 18.46 acres of riparian habitat (including forested wetland below OHWM) that would be affected by the Proposed Action at Sites 2-2 and 2-3, replacement riparian habitat would be created, including ~~19.31~~ 15.76 acres on site and ~~32.32~~ 35.75 acres off site. For temporary impacts to 39 acres of riparian habitat (including forested wetland below the OHWM) at the Arden Pond Mitigation Site, approximately 22 acres of riparian habitat (16 acres above the OHWM and 6 acres below the OHWM) would be restored to better than pre-project conditions. Additional riparian habitat will be planted in previously disturbed areas creating a net gain of riparian habitat. Implementing this compensatory mitigation would reduce long-term impacts on any natural community or wildlife habitat within the Project Area to a less-than-significant level by creating on-site and off-site riparian habitat. Short-term impacts on vegetation and wildlife habitat would remain significant and unavoidable, because it would take several years (e.g., 10 to 15 years) for riparian habitat to become fully mature and provide the same values as existing riparian habitat.

The following text has been changed on page 3-76 of the Draft SEIS/SEIS has been revised as follows:

Valley Elderberry Longhorn Beetle

Construction would directly affect ~~1.07~~ 1.04 acres of VELB habitat at Site 2-2 and ~~8.64~~ 8.63 acres at Site 2-3. An additional 7.50 acres would be impacted at the Arden Pond Mitigation Site during the construction. These areas include the shrub and the riparian habitat within 25 meters (82 feet), which is considered VELB habitat. The impact of this loss of Federally listed species habitat would be significant. The impact would be reduced to a less-than-significant level with implementation of Mitigation Measure VELB-1, which would include creating ~~51.63~~ 51.51 acres of on-site and off-site VELB habitat. The affected shrubs would be transplanted to one of the approved elderberry shrub mitigation sites: Rio Americano West, Rio Americano East or the Rossmoor East Mitigation Sites or other elderberry shrub mitigation sites in the LAR as described in Chapter 2, *Alternatives*.

The following text has been changed on page 3-77 of the Draft SEIS/SEIS has been revised as follows:

Western Yellow-Billed Cuckoo

As described in the Proposed Action effects discussion in Section 3.8.4 (page 167) of the ARCF GRR FEIS/FEIR, the Project Area is unlikely to support nesting western yellow-billed cuckoos because the riparian corridor is narrow, patchy, and frequented by park visitors. Construction of Sites 2-2 and 2-3 would result in the loss of ~~18.62~~ 18.46 acres of riparian habitat (Table 3-3). The construction of Arden Pond Mitigation Site would result in the temporary loss of approximately 30 acres of riparian habitat. This loss of habitat would be a significant impact. With implementation of Mitigation Measures VELB-1, VEG-1, VEG-2, and BIRD-1, the impact would be reduced to a less-than-significant level.

Swainson's Hawk

As described in Section 3.8.4 (page 168) of the ARCF GRR FEIS/FEIR, the Project Area possesses suitable roosting and nesting habitat for Swainson's hawk. Project construction could affect the riparian habitat used by this species for roosting and nesting. Although the removal of riparian trees would be mitigated through compensatory plantings, there would be a temporal loss of habitat until the newly planted trees could become established and mature. Long-term effects on Swainson's hawk nesting habitat could result from the loss of riparian habitat in the Project Area as follows: 1.50 acres at Site 2-2 and ~~14.75~~ 14.52 acres at Site 2-3 for erosion protection efforts, and ~~0.52~~ 0.48 acres at Site 2-2 and 1.96 acres at Site 2-3 of riparian habitat within the access areas, haul routes, and staging areas. An additional 8 acres would be temporarily impacted within restoration areas and 22 acres of habitat within access areas and temporary work zones during restoration efforts at the Arden Pond Mitigation Site. This would be a significant impact on Swainson's hawk nesting habitat.

The following text has been changed on page 3-89 of the Draft SEIS/SEIS has been revised as follows:

Transplanting

Affected elderberry shrubs with one or more stems measuring 1.0 inch or greater in diameter at ground level that could feasibly be transplanted in accordance with the 2017 Framework must be transplanted to a mitigation site as approved by USFWS. Elderberry compensation would be planted in the Parkway, but outside of the Project Area (off-site) because of construction timing. USACE would find areas in the Lower American River Parkway to either expand existing compensation areas or provide connectivity between areas of conserved VELB habitat. Sites within the Lower American River Parkway would be coordinated with the Sacramento County Department of Regional Parks and USFWS during the design phase of the project. Sites would be designed and developed in accordance with the criteria listed below before any effects on VELB habitat.

For impacts on VELB habitat at Site 2-2 (~~1.07~~ 1.04 acres), Site 2-3 (~~8.64~~ 8.63 acres), and the Arden Pond Mitigation Site (7.50 acres), USACE would mitigate at a 3:1 ratio and create a total of ~~51.63~~ 51.51 acres of VELB and riparian habitat off-site. The elderberry shrubs that would be affected would be transplanted to either the Rio Americano West Mitigation Site, the Rio Americano East Mitigation Site, or Rossmoor East Mitigation Site. These sites would be used for the transplantation and compensation for impacts on elderberry shrubs as described in the *Compensatory Mitigation* section below.

The following text changes have been made to Mitigation Measure TR-1 on pages 3-119 and 3 120 in Section 3.8, *Transportation and Circulation*:

Mitigation Measure TR-1: Prepare and Implement a Traffic Control and Road Maintenance Plan. Before the start of project-related construction activities, USACE and the CVFPB would require the contractor to prepare a Traffic Control and Road Maintenance Plan. This plan would describe the methods of traffic control to be used during construction. All on-street construction traffic would be required to comply with the local jurisdiction's standard construction specifications. The items listed below would be included in the plan and as terms of the construction contracts:

- The contractor would be required to prepare a Traffic Control and Road Maintenance Plan. A traffic control plan describes the methods of traffic control to be used during construction. All on-street construction traffic would be required to comply with the ~~local jurisdiction~~ City of Sacramento's standard construction specifications as detailed in City Code 12.20.030 to the satisfaction of the City Traffic Engineer. The plan would reduce the effects of construction on the roadway system in the Project Area throughout the construction period.

- Construction contractors would follow the standard construction specifications of affected jurisdictions and obtain the appropriate encroachment permits, if required. The conditions of the encroachment permit would be incorporated into the construction contract and would be enforced by the agency that issues the encroachment permit.

- Proposed lane closures would be coordinated with the appropriate jurisdiction and would be minimized to the extent possible during the morning and evening peak traffic periods.

- Standard construction specifications also typically limit lane closures during commuting hours. Lane closures would be kept as short as possible. If a road must be closed, detour routes and/or temporary roads would be made to accommodate traffic flows. Detour signs would be provided to direct traffic through detours. Advance notice signs of upcoming construction activities would be posted at least 1 week in advance so that motorists are able to avoid

traveling through the study area during these times. Within the Parkway, detours would be used to allow for continued use by bicycle commuters.

- Safe pedestrian and bicyclist access would be maintained around the construction areas at all times. Construction areas would be secured as required by the applicable jurisdiction to prevent pedestrians and bicyclists from entering the work site, and all stationary equipment would be located as far away as possible from areas where bicyclists and pedestrians are present.
- The construction contractor would provide adequate parking for construction trucks, equipment, and construction workers within the designated staging areas throughout the construction period. If inadequate space for parking is available at a given work site, the construction contractor would provide an off-site staging area and, as needed, coordinate the daily transport of construction vehicles, equipment, and personnel to and from the work site.
- The construction contractor would assess damage to roadways used during construction and would repair all potholes, fractures, or other damages.
- The construction contractor would notify and consult with emergency service providers at least 14 days prior to commencement of construction that would partially or fully obstruct roadways to ensure that alternative ~~maintain~~ emergency access routes are established ~~and~~ to facilitate the passage of emergency vehicles on city streets.
- Emergency vehicle access would be made available at all times. The contractor would be required to coordinate with local emergency responders to inform them of the construction activities.

The following text changes were made on page 3-136 of the Draft SEIS/SEIR:

Mitigation Measure AQ-3: Develop and Implement a Plan for Enhanced On-Site Exhaust Controls. Actual emissions of nonattainment and maintenance pollutants would be tracked monthly using tools acceptable to SMAQMD (e.g., construction mitigation calculator, SMAQMD's Equipment List). USACE shall submit to SMAQMD a comprehensive inventory of all off-road construction equipment (50 horsepower or more) to be used 8 hours or more during project construction. The tracking data would be used to verify that all pollutants remain below the CEQA daily thresholds, General Conformity de minimis thresholds, or are fully mitigated and offset if emissions exceed either.

The initial report would include all the following details:

- Information about the project information and the construction company.
- The equipment type, horsepower rating, engine model year, projected hours of use, and CARB equipment identification number for each piece of equipment in the plan.

- All owned, leased, and subcontracted equipment to be used. Updated reports would be submitted monthly to demonstrate continued project compliance. SMAQMD may conduct periodic site inspections to determine compliance. Nothing in this mitigation would supersede other air district, state, or federal rules or regulations.

~~Mitigation Measure AQ-3 will sunset on January 1, 2028, when full implementation of the CARB In-Use Off-Road Regulation is expected.~~

The following text changes were made to page 3-137 of the Draft SEIS/SEIR:

Summary

Implementation of the mitigation measures contained in the ARCF GRR FEIS/EIR would reduce construction-generated NOX emissions to a less-than-significant level that would not result in adverse health effects (as was shown in the HRA). In addition, with incorporation of dust control measures, PM (fugitive dust) emissions would be further reduced (i.e., by up to 75 percent) and would not exceed applicable SMAQMD thresholds or result in adverse health effects. The application of BMPs combined with engagement in SMAQMD's NOX mitigation fee program <u>or offsets obtained through purchase or loan</u> would be sufficient to reduce emissions to zero, in accordance with the Clean Air Act for projects that exceed de minimis levels, and consequently below SMAQMD's recommended daily mass emissions threshold of 85 lb/day. Emissions of ROG, PM10, and PM2.5 would additionally be reduced through the application of the mitigation measures. As discussed in the General Conformity Determination, included in Appendix F, the project would be in conformity with the Clean Air Act and would not cause or contribute to a new violation, nor increase the frequency or severity of existing violations of the NAAQS. Based on the conformity analysis, no exceedance of the de minimis thresholds in 2022 would occur. Construction-related air quality impacts would be less than significant with mitigation.

The following text changes were made to pages 3-149 and 3-150 of the Draft SEIS/SEIR:

Purchase carbon offsets for program-wide GHG emissions (direct plus indirect emissions from on-road haul trucks plus commute vehicles) that meet the criteria of being real, quantifiable, permanent, verifiable, enforceable, and additional, consistent with the standards set forth in Health and Safety Code section 38562, subdivisions (d)(1) and (d)(2). Such credits shall be based on protocols approved by the California Air Resources Board (CARB), consistent with Section 95972 of Title 17 of the California Code of Regulations, and shall not allow the use of offset projects originating outside of California, except to the extent that the quality of the offsets, and their sufficiency under the standards set forth herein, can be verified by USACE or the Sacramento Metropolitan Air Quality Management District (SMAQMD). Such credits must be purchased through one of the following: (i) a CARB-approved registry, such as the Climate Action Reserve, the American Carbon Registry, and the Verified Carbon Standard; (ii)

any registry approved by CARB to act as a registry under the California Cap and Trade program; or (iii) through the California Air Pollution Control Officers Association's (CAPCOA's) GHG Rx and SMAQMD. Purchase of carbon offsets ~~that~~ shall be sufficient to reduce the Proposed Action's GHG emissions to ~~and~~ below SMAQMD's significance thresholds applicable ~~at the time~~ prior to the start of construction through a one-time purchase of credits, according to SMAQMD's timing requirements, based on the emissions estimates in this SEIS/SEIR or on an ongoing basis based on monthly emissions estimates that would be prepared in accordance with procedures established by Measure AQ-3.

Chapter 4, Cumulative and Growth-Inducing Effects

The following text has been added to Chapter 4, *Cumulative and Growth-Inducing Effects* of the Draft SEIS/SEIR to address this comment:

4.1.1.16 Caltrans SAC-51 American River Bridge Deck Replacement Project

Caltrans proposes to rehabilitate the American River Bridge along State Route (SR) 51/ Business Intestate 80 in Sacramento County. The project would remove and replace the existing concrete deck, remove and replace the steel girder post-tensioning systems, modify the existing soundwall, install sheet piling around piers for scour mitigation, construct concrete catcher blocks, widen the bridge to accommodate traffic during construction, add a Class I bike/pedestrian path, and plan for future transportation needs on SR 51. The purpose of the project is to replace the deck on the American River Bridge on SR 51 in Sacramento County, prevent scour, and provide a multimodal connection between downtown and eastern Sacramento and plan for future transportation needs. The proposed work would repair, protect, and extend the service life of the deck. Construction, road construction, and construction traffic associated with Caltrans SAC-51 project have the potential to contribute to cumulative impacts with the Proposed Action.

Chapter 5, Compliance with Federal and State Laws and Regulations

The following text on page 5-7 in Chapter 5, *Compliance with Federal and State Laws and Regulations* has been revised as follows:

5.1.11 Executive Order 11990, Protection of Wetlands

The purpose of EO 11990 is to "minimize the destruction, loss or degradation of wetlands and to preserve and enhance the natural and beneficial values of wetlands." To meet these objectives, EO 11990 requires Federal agencies, in planning their actions, to consider alternatives to wetland sites and limit potential damage if an activity affecting a wetland cannot be avoided. EO 11990 applies to:

- acquisition, management, and disposition of Federal lands and facilities construction;
- improvement projects which are undertaken, financed, or assisted by Federal agencies; and
- Federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulation, and licensing activities.
- As discussed in Section 3.4, Vegetation and Wildlife, ~~no wetlands are located within the footprint of the Proposed Action,~~ forested wetlands are located within the footprint of the Proposed Action and will be impacted during construction activities. However, impacts to forested wetlands will be minimized to the greatest extent feasible. Where feasible, forested wetlands will be restored onsite and additional forested wetlands will be created within the American River and other offsite locations to ensure no net loss of wetlands as a result of implementation of the Proposed Action.

Appendix K
Public Involvement

This appendix provides information on public involvement for the Draft Supplemental EIS/EIR. The Draft Supplemental EIS/EIR was circulated on June 4, 2021 for a 45-day public review period ending on July 19, 2021. A notice of availability was published in the Federal Register and the Sacramento Bee on June 4, 2021. An electronic version of the document was posted to the USACE website and hard copies were made available by request to the public.

USACE posted information about the Proposed Action on its website at www.sacleveeupgrades.com, which included summarized information on the Proposed Action, an electronic copy of the Draft Supplemental EIS/EIR, a Frequently Asked Questions document prepared by the local sponsor for the project, and instructions as to how to participate in the virtual public meeting held on June 29, 2021. The website was subsequently updated to include the presentation slides used during the public meeting.

A robust public outreach was conducted about the nature and location of the proposed erosion work associated with this draft supplemental document. The neighborhoods directly adjacent to future erosion work and along the proposed haul routes were noticed about the public meeting and where to send comments. A total of 2,297 direct mail notices were sent. The notices contained summary information about the Proposed Action, information about the virtual public meeting, and included a link to the USACE website. A Notice of Availability was sent to 150 interested parties, public agencies, and elected officials regarding the publication of the Draft Supplemental EIS/EIR and the virtual public meeting.

A total of 30 people attended the virtual public meeting, comments were solicited during the meeting and responded to in Appendix H of this Final Supplemental EIS/EIR.

A total of 1 comment was received during the public meeting. In addition, a total of 65 comments were received by letter and email on the Draft Supplemental EIS/EIR. Letters and responses are included in Appendix I of this Final Supplemental EIS/EIR.
