

Work barge placing rock material at Site 5

American River Common Features 2016 Sacramento River Levees Monthly Update

AUGUST 2024

Highlights (last 30 days)

Sacramento River Erosion (SRE): Contract 2 Season 2 has begun. Season 2 consists of erosion control work at Sites 1, 4, 5 and the remainder of 6 (see map on the next page). Work will mostly be completed by barge. However, the work around Pioneer Bridge must be accessed from land (an area near Pioneer Landing Park (1900 Front Street). In water rock placement started at Site 6 and then moved to Site 5.

Contract 4 will begin mid August.

Sacramento River East Levee (SREL): Contract 3 is complete. Contract 4 construction is complete and USACE has begun performing testing on the Cutoff wall. The Contractor is expected to be demobilized completely by August 2024.

Looking Ahead (next 30+ days)

What can I expect?

SRE Sacramento River Erosion

In water rock placement will continue for Contract 2 Site 5.

Contract 4 work (just downstream of Contract 1, which is just downstream of the Westin Hotel (approaching Chicory Bend) will begin mid August. You will notice barge conveying materials to the site.

Hydroseeding and irrigation on Contract 1 and Contract 2 Season 1 Sites (2, 3 and 6a) will begin and continue through the summer with native plants, shrubs and tree plantings to occur in October.

SREL Seepage, Stability, and Overtopping

Garcia Bend Park will open late July 2024. The contractor will be performing site clean-up through July 2024 on the remaining portions of the project.

Question of the Month

When is bird surveying completed before construction and which agency performs them?

The State of California issues surveying protocol and is responsible for completing the surveys. Months before a Corps construction project, the Corps and its non-Federal partners (including the State) coordinate to ensure general surveying is completed. Then, a more focused (species / location-specific) survey is performed closer to when actual construction is to occur. There is a biological monitor assigned to each project to monitor the construction site for special-status biological resources (e.g., Swainsons Hawks, Yellow-billed cuckoo, etc.).
