APPENDIX J

CULTURAL RESOURCES CORRESPONDENCE
Environmental Resources Branch

Ms. Irene Zwierlein
Amah/Mutsun Tribal Band
789 Canada Road
Woodside, California 94062

Dear Ms. Zwierlein:

In accordance with Section 106 of the National Historic Preservation Act of 1966, as amended, pursuant to 36 CFR 800.2 (c)(2)(ii), we are writing to inform you of the proposed Delta Islands and Levees Feasibility Study (Delta Study) in the Sacramento – San Joaquin Delta. The U.S. Army Corps of Engineers (Corps) is the lead Federal agency and the Department of Water Resources (DWR) is the non-Federal sponsor. The Corps and DWR are working together to consider a variety of alternatives in order to achieve the objectives of flood risk management and ecosystem restoration for the Delta Study.

Potential alternatives currently being considered include both structural and non-structural measures. Structural measures could include such things as construction of protective corridors, ring levees and setback levees to protect population centers and critical infrastructure (i.e. roads, railroads, aqueducts, transmission lines, etc.). Non-structural measures could include such things as flood-proofing/elevating structures, emergency response planning, development of a floodplain management plan, and other land use measures. Also included among these alternatives is the restoration of habitat in conjunction with the construction of protective corridors and ring levees.

The study area extends across approximately 740,000 acres of land segregated into some 80 tracts and islands and 1,100 miles of levee. The area spans six counties including Contra Costa, Alameda, San Joaquin, Sacramento, Yolo, and Solano (enclosure). In the future, this study area will become more focused as alternatives are developed.

While this study is currently in the early planning stages and a records and literature search has not yet been conducted, one is planned for the near future. We are sensitive to the protection of traditional cultural properties and sacred sites, and make every effort to avoid them. Please let us know if you have knowledge of locations of archeological sites, or areas of traditional cultural value or concern in or near the proposed Delta Islands and Levees Feasibility Study area. Correspondence may be sent to Mr. Richard Perry, U.S. Army Corps of Engineers, Sacramento District, 1325 J Street, Sacramento, California 95814-2922. If you have any questions or would like additional information, please contact Mr. Perry at (916) 557-5218 or by email at: richard.m.perry@usace.army.mil. For any project specific questions, please contact Mr. Dennis Clark, Project Manager, at (916) 557-7963 or by email at: dennis.g.clark@usace.army.mil.

Sincerely,

The U.S. Army Corps of Engineers (Corps) is the lead Federal agency and the Department of Water Resources (DWR) is the non-Federal sponsor. The Corps and DWR are working together to consider a variety of alternatives in order to achieve the objectives of flood risk management and ecosystem restoration for the Delta Study.

Potential alternatives currently being considered include both structural and non-structural measures. Structural measures could include such things as construction of protective corridors, ring levees and setback levees to protect population centers and critical infrastructure (i.e. roads, railroads, aqueducts, transmission lines, etc.). Non-structural measures could include such things as flood-proofing/elevating structures, emergency response planning, development of a floodplain management plan, and other land use measures. Also included among these alternatives is the restoration of habitat in conjunction with the construction of protective corridors and ring levees.

The study area extends across approximately 740,000 acres of land segregated into some 80 tracts and islands and 1,100 miles of levee. The area spans six counties including Contra Costa, Alameda, San Joaquin, Sacramento, Yolo, and Solano (enclosure). In the future, this study area will become more focused as alternatives are developed.

While this study is currently in the early planning stages and a records and literature search has not yet been conducted, one is planned for the near future. We are sensitive to the protection of traditional cultural properties and sacred sites, and make every effort to avoid them. Please let us know if you have knowledge of locations of archeological sites, or areas of traditional cultural value or concern in or near the proposed Delta Islands and Levees Feasibility Study area. Correspondence may be sent to Mr. Richard Perry, U.S. Army Corps of Engineers, Sacramento District, 1325 J Street, Sacramento, California 95814-2922. If you have any questions or would like additional information, please contact Mr. Perry at (916) 557-5218 or by email at: richard.m.perry@usace.army.mil. For any project specific questions, please contact Mr. Dennis Clark, Project Manager, at (916) 557-7963 or by email at: dennis.g.clark@usace.army.mil.

Sincerely,

Alicia E. Kirchner

RE: Delta Islands and Levees Feasibility Study (Delta Study)

Dear Mr. Perry,

Thank you for allowing Wilton Rancheria the opportunity to comment on the Proposed Action for the Delta Islands and Levees Feasibility Study. WR’s Cultural Resources Department would like to comment on the proposed project’s efforts for flood risk management and to restore the ecosystem of the Delta. WR is nearby and considers the Delta to be sacred.

WR is aware that significant cultural archeological sites may exist throughout the proposed project area. WR’s Cultural Resources Department would like to receive copies of any completed record searches. We would also like to request any archeological, cultural and environmental surveys and reports that have been, or will be, completed for the project. WR would like to be present for any activities that have potential to impact the lifeways, traditional cultural properties and landscapes that may be of sacred or ceremonial significance. Please keep us informed on the status of this project.

Thank you for providing us with the opportunity to comment. If you have any questions, please contact Steven Hutchason, Executive Director of Cultural Resources at (916) 683-6000 ext. 2006 or email shutchason@wiltonrancheria-nsn.gov.

Sincerely,

Executive Director of Cultural Resources

CC: Mr. Dennis Clark, Project Manager dennis.g.clark@usace.army.mil
Environmental Resources Branch

MAY 21 2014

Mary Daniels-Tarango, Chairperson
Wilton Rancheria
7916 Farnell Way
Sacramento, CA 95823

Dear Ms. Daniels-Tarango:

We are writing you with regard to the ongoing Delta Islands and Levees Feasibility Study (Delta Study) in the Sacramento – San Joaquin Delta, California. The U.S. Army Corps of Engineers (Corps) is the lead Federal agency and the California Department of Water Resources (DWR) is the non-Federal sponsor. The Corps and DWR are proposing to restore emergent marsh habitat by placing dredged material in submerged islands in the Western Delta. In accordance with Section 106 of the National Historic Preservation Act, we initially contacted you with regard to this project in April 2013 we are writing you now with an updated project description and proposed project area and responding to a letter received from your staff. We request any information or concerns you may have about cultural resources in this area of the Delta.

The Delta Study proposes to restore intertidal marsh habitat, requiring fill material to be placed via direct placement. Proposed sources for the fill material include dredge material from yearly Operations and Maintenance of the Stockton Deep Water Ship Channel and previously dredged material from existing dredge spoils areas. Enclosed is a map showing the study area, including the existing dredge spoil areas, and the area of potential effect (APE). The cultural resources study area has been narrowed from the entire Delta to Big Break, Franks Tract, and Little Franks Tract; although a larger look at the overall history of the Delta was also considered. These locations currently are submerged, although for at least a short period of time they were protected by levees, occupied, and farmed. Other areas, which may be temporarily impacted by pipelines used to move the dredge material are also considered, to a lesser degree, and include areas of Sherman, Bradford, and Jersey Islands.

The APE is defined as the soil placement areas within Little Franks Tract and Big Break Regional Shoreline as seen on the enclosed map. In addition, linear alignments for the temporary pipelines to transport materials to the work areas are also considered part of the APE as are unidentified staging areas. Areas not considered as part of the APE are the locations from where the dredge materials will be taken. These areas are established dredge spoils deposition areas and are comprised entirely of displaced material from maintenance dredging for other projects.
The Corps referenced a record search for the entire Delta completed in 2012 at California Historic Resources Information Centers for the Bay Delta Conservation Plan. Based on this search no known cultural resources are located within the APE. An updated record search has been requested for this specific project. Although your staff requested a copy of the record search in their letter, because we are under a user agreement with the California Historic Resources Information System, we are not able to comply with this request. We recommend that you contact the appropriate Information Centers directly if you desire the information for this project area. A list of sites and bibliography of reports within the APE (if any) as well as a copy of the final cultural resources report for this project will be forwarded to your cultural resources staff upon its completion.

Additional research was undertaken using in-house records and those held by the East Bay Regional Park System, the California State Lands Commission, and National Register of Historic Places. No previously recorded cultural resources are located within the APE. The proposed ecosystem restoration areas in Big Break and Little Franks Tract are completely submerged and the temporary pipeline alignments are only proposed, no pedestrian survey was undertaken. However, boat trips that included photographing the remnant levees and other historic features were undertaken to record and document the current condition of these newly identified resources. Pipeline alignments will be monitored and routed around any cultural resources encountered in the future.

We are sensitive to the protection of traditional cultural properties and sacred sites, and make every effort to avoid them. Please let us know if you have knowledge of locations of archeological sites, or areas of traditional cultural value or concern in or near the proposed Delta Islands and Levees Feasibility Study area. Correspondence may be sent to Ms. Nikki Polson, U.S. Army Corps of Engineers, Sacramento District, 1325 J Street, Sacramento, California 95814-2922. If you have any questions or would like additional information, please contact Ms. Polson at (916) 557-6977 or by email at: nikki.polson@usace.army.mil. For any project specific questions, please contact Mr. Dennis Clark, Project Manager, at (916) 557-7963 or by email at: dennis.g.clark@usace.army.mil.

Sincerely,

Additional research was undertaken using in-house records and those held by the East Bay Regional Park System, the California State Lands Commission, and National Register of Historic Places. No previously recorded cultural resources are located within the APE. The proposed ecosystem restoration areas in Big Break and Little Franks Tract are completely submerged and the temporary pipeline alignments are only proposed, no pedestrian survey was undertaken. However, boat trips that included photographing the remnant levees and other historic features were undertaken to record and document the current condition of these newly identified resources. Pipeline alignments will be monitored and routed around any cultural resources encountered in the future.

We are sensitive to the protection of traditional cultural properties and sacred sites, and make every effort to avoid them. Please let us know if you have knowledge of locations of archeological sites, or areas of traditional cultural value or concern in or near the proposed Delta Islands and Levees Feasibility Study area. Correspondence may be sent to Ms. Nikki Polson, U.S. Army Corps of Engineers, Sacramento District, 1325 J Street, Sacramento, California 95814-2922. If you have any questions or would like additional information, please contact Ms. Polson at (916) 557-6977 or by email at: nikki.polson@usace.army.mil. For any project specific questions, please contact Mr. Dennis Clark, Project Manager, at (916) 557-7963 or by email at: dennis.g.clark@usace.army.mil.

Sincerely,

Alicia E. Kirchner

Katherine Erolinda Perez  
P.O. Box 717  
Linden, CA 95236

Dear Ms. Perez:

We are writing you with regard to the ongoing Delta Islands and Levees Feasibility Study (Delta Study) in the Sacramento – San Joaquin Delta, California. The U.S. Army Corps of Engineers (Corps) is the lead Federal agency and the California Department of Water Resources (DWR) is the non-Federal sponsor. The Corps and DWR are proposing to restore emergent marsh habitat by placing dredged material in submerged islands in the Western Delta. In accordance with Section 106 of the National Historic Preservation Act, we initially contacted you with regard to this project in April 2013 and we are contacting you now with an updated project description and proposed project area. We request any information or concerns you may have about cultural resources in this area of the Delta.

The Delta Study proposes to restore intertidal marsh habitat, requiring fill material to be placed via direct placement. Proposed sources for the fill material include dredge material from yearly Operations and Maintenance of the Stockton Deep Water Ship Channel and previously dredged material from existing dredge spoils areas. Enclosed is a map showing the study area, including the existing dredge spoil areas, and the area of potential effect (APE). The cultural resources study area has been narrowed from the entire Delta to Big Break, Franks Tract, and Little Franks Tract; although a larger look at the overall history of the Delta was also considered. These locations currently are submerged, although for at least a short period of time they were protected by levees, occupied, and farmed. Other areas, which may be temporarily impacted by pipelines used to move the dredge material are also considered, to a lesser degree, and include areas of Sherman, Bradford, and Jersey Islands.

The APE is defined as the soil placement areas within Little Franks Tract and Big Break Regional Shoreline as seen on the enclosed map. In addition, linear alignments for the temporary pipelines to transport materials to the work areas are also considered part of the APE as are unidentified staging areas. Areas not considered as part of the APE are the locations from where the dredge materials will be taken. These areas are established dredge spoils deposition areas and are comprised entirely of displaced material from maintenance dredging for other projects.
A record search for the entire Delta was completed in 2012 at California Historic Resources Information Centers for the Bay Delta Conservation Plan. An updated record search currently is being requested for this specific project.

Additional research was undertaken using in-house records and those held by the East Bay Regional Park System, the California State Lands Commission, and National Register of Historic Places. No previously recorded cultural resources are located within the APE. The proposed ecosystem restoration areas in Big Break and Little Franks Tract are completely submerged and the temporary pipeline alignments are only proposed, no pedestrian survey was undertaken. However, boat trips that included photographing the remnant levees and other historic features were undertaken to record and document the current condition of these newly identified resources. Pipeline alignments will be monitored and routed around any cultural resources encountered in the future.

We are sensitive to the protection of traditional cultural properties and sacred sites, and make every effort to avoid them. Please let us know if you have knowledge of locations of archeological sites, or areas of traditional cultural value or concern in or near the proposed Delta Islands and Levees Feasibility Study area. Correspondence may be sent to Ms. Nikki Polson, U.S. Army Corps of Engineers, Sacramento District, 1325 J Street, Sacramento, California 95814-2922. If you have any questions or would like additional information, please contact Ms. Polson at (916) 557-6977 or by email at: nikki.polson@usace.army.mil. For any project specific questions, please contact Mr. Dennis Clark, Project Manager, at (916) 557-7963 or by email at: dennis.g.clark@usace.army.mil.

MAY 15, 2014

Ms. Carol Rowland-Nawi, Ph.D.
State Historic Preservation Officer
California State Department of Parks and Recreation
1725 23rd Street, Suite 100
Sacramento, California 95816

Dear Dr. Rowland-Nawi:

We are writing you with regard to the ongoing Delta Islands and Levees Feasibility Study (Delta Study) in the Sacramento – San Joaquin Delta, California. The U.S. Army Corps of Engineers (Corps) is the lead Federal agency and the California Department of Water Resources (DWR) is the non-Federal sponsor. In accordance with Section 106 of the National Historic Preservation Act, we are requesting your concurrence on our area of potential effect (APE), eligibility determinations, and finding of no historic properties affected due to the proposed project.

The Corps and DWR are proposing to restore emergent marsh habitat by placing dredged material in submerged islands in the Western Delta, requiring fill material to be placed via direct placement. Proposed sources for the fill material include dredge material from yearly Operations and Maintenance of the Stockton Deep Water Ship Channel and previously dredged material from existing dredge spoils areas.

The Corps has defined the APE as the soil placement areas within Little Franks Tract and Big Break Regional Shoreline as seen on Figure 1 of "A Cultural Resources Inventory for the Delta Feasibility Study, Contra Costa County, California" (Enclosure 1). These locations are currently submerged, although for at least a short period of time they were protected by levees, occupied, and farmed. In addition, linear alignments for the temporary pipelines to transport materials to the work areas are also considered part of the APE (Enclosure 1:Figure 1). Areas not considered as part of the APE are the locations of existing dredge material stockpiles. These areas are established dredge spoils deposition areas and are comprised entirely of displaced material from maintenance dredging for other projects.

The Corps consulted a record search for the entire Delta completed in 2012 for the Bay Delta Conservation Plan and performed an updated record search in March 2014 at the Northwest and North Central Information Centers. Additional research was undertaken using in-house records and those held by the East Bay Regional Park System, the California State Lands Commission, and National Register of Historic
Places. Only one previously recorded site is located within the APE, the Sherman Island Levee (CA-SAC-496H). One of the proposed pipeline alignments may cross this resource in as many as three places. The levee was recommended as not eligible in 2013 in connection to early reclamation efforts (Enclosure 2). It may be eligible for its connection to the as yet undefined Sacramento River Flood Control Project levees, but only as a contributing element.

The proposed ecosystem restoration areas in Big Break and Little Franks Tract are completely submerged and the temporary pipeline alignments are only proposed, so no pedestrian survey was undertaken. However, boat trips that included photographing the remnant levees and other historic features were undertaken to record and document the current condition of these newly identified resources. Two new levees were recorded on DPR forms as a result of this study: the Big Break Levee and the Franks Tract Levee (Enclosure 3). Pipeline alignments will be monitored and routed around any cultural resources encountered during project construction. If a cultural resource cannot be avoided, the Corps will reconsult pursuant to CFR 800.13.

The levees at Big Break, Franks Tract, and Sherman Island had roles in early reclamation and flood control efforts had they survived. The first two levees no longer act as flood barriers and the land behind them is no longer reclaimed and the latter levee has been significantly altered since the early reclamation and flood control efforts; therefore, they are not eligible under Criterion A. No single important person has been identified as central to their design or construction, and so they are not eligible under Criterion B. None of the levees stand as unique examples of a type and the deteriorated state of the Big Break and Franks Tract further makes them ineligible for the register under Criterion C. Finally, no information potential exists within the levees themselves, which could not be gained elsewhere; therefore they are not eligible under Criterion D. The levees at Big Break, Franks Tract, and Sherman Island have been determined not eligible by the Corps for their lack of integrity setting, feeling, association, workmanship. The Sherman Island levee may be eligible for its connection to the as yet undefined Sacramento River Flood Control Project levees, as a contributing element. However, the temporary placement of pipes over the levee does not have the potential to effect the project levees.

Native American Tribes and individuals with known interest in the Delta were contacted via letter in April 2013. The Corps received a letter from the Wilton Rancheria in May 2013 stating their interest in the project and requesting additional information. Additional information was sent to Tribes and individuals, including additional Tribes that had been identified recently as having interest in the project area, in March 2014. One response to the March letter was received from the Yocha Dehe stating that they know of no cultural resources within the APE and that they have no concerns regarding the project.
Identified cultural resources within the APE are limited to the remnants of three turn of the century levees, which the Corps determined to be not eligible for listing in the National Register. Although the Sherman Island Levee may be a contributing element to a larger, undefined, multi-property resource, it will only be crossed by a temporary pipeline and there is no potential to affect this resource. Although there are cultural resources that may be eligible for listing in the National Register within the larger study area, no historic properties were identified within the APE as a result of this study, and this project will result in no historic properties affected (36 CFR § 800.4(d)(1)).

In summary, we are asking you for your concurrence with our delineation of the APE, determination of eligibility, and finding of no historic properties affected for this project. If you have any questions or comments, please contact Ms. Nikki Polson, Archeologist, at (916) 557-6977, or by email at nikki.polson@usace.army.mil.

Sincerely,

Alicia E. Kirchner

RE: Delta Islands and Levees Feasibility Study (Delta Study), Contra Costa County, California

Dear Ms. Kirchner:

Thank you for your May 15, 2014 letter initiating consultation with me for the above referenced project in order to comply with Section 106 of the National Historic Preservation Act of 1966 and its implementing regulations at 36 CFR Part 800. The U.S. Army Corps of Engineers (Corps) has requested my comments on the Area of Potential Effects (APE) for the proposed undertaking, the determination of eligibility, and concurrence that the undertaking will have no affect to historic properties.

The undertaking proposes to restore emergent marsh habitat by placing dredged material in submerged islands in the Western Delta, requiring fill material to be placed via direct placement. Proposed sources for the fill material include dredge material from yearly Operations and Maintenance of the Stockton Deep Water Ship Channel and previously dredged material from existing dredge spoils areas.

The Corps has defined the APE as the soil placement areas within Little Franks Tract and Big Break Regional Shoreline. An APE map of these locations was included as Figure 1 of A Cultural Resources Inventory for the Delta Feasibility Study, Contra Costa County (report), enclosed with your letter. These locations are currently submerged, but were previously protected by levees, occupied and farmed. In addition, linear alignments for the temporary, flexible above-ground pipelines to transport materials to the work areas are also considered part of the APE. I do not object to this APE.

As described in your letter, the cultural resources inventory included a review of the records search completed in 2012 for the Bay Delta Conservation Plan and an updated records search in March 2014. Additional research was undertaken using in-house records and those held by the East Bay Regional Park System, California State Lands Commission, and National Register of Historic Places (NRHP). Only one previously recorded site is located within the APE, the Sherman Island Levee (CA-SAC-496H). I concurred with the Corps recommendation that the Sherman Island Levee is not
individually eligible for the NRHP by my letter of October 11, 2013. As stated in your letter, it may be eligible for its connection to the as-yet-unidentified Sacramento River Flood Control Project as a contributing feature.

The Corps contacted Native American tribes and individuals with known interest in the Delta via letter in April, 2013. The Corps received a letter from the Wilton Rancheria in May, 2013, stating their interest in the project and requesting additional information. Additional information was provided to all Tribes and individuals in March, 2014. The Yocha Dehe stating that they know of no cultural resources in the APE and have no concerns regarding the project.

The proposed ecosystem restoration areas in Big Break and Little Frank Tract are completely submerged and the temporary pipeline routes are only proposed, so no pedestrian survey was undertaken. Two new levees, the Big Break Levee and Little Franks Levee, were recorded in the APE via boat trips. Pipeline alignments will be monitored and routed around any cultural resources encountered during project construction. As stated in your letter, if a resource cannot be avoided the Corps will consult with my office pursuant to 36 CFR § 800.13.

The levees at Big Break and Little Franks Tract and Sherman Island had roles in early reclamation and flood control efforts. However, the first two levees no longer act as flood barriers and the land behind them is no longer reclaimed. The Corps has determined that the Big Break and Little Franks Tract levees do not meet any of the NRHP criteria and are not eligible for listing. I concur with this determination.

Furthermore, as there were no historic properties identified within the APE, the Corps has determined that the undertaking will have no effect on historic properties. I concur with this determination.

Thank you for considering historic properties as part of you project planning and I look forward to consultation on future projects. Please direct any questions or concerns that you may have to Kathleen Forrest at 916-445-7022 or at kathleen.forrest@parks.ca.gov.

Sincerely,

Carol Roland-Nawi, Ph.D.
State Historic Preservation Officer
