1.0 Introduction

On behalf of the United States Army Corps of Engineers (USACE), Sacramento District, Parsons Federal Solutions has prepared this First Semi-Annual 2024 (2024S1) Groundwater and Soil Vapor Monitoring Report for Hazardous, Toxic, and Radioactive Waste (HTRW; Project 01) at the former Titan 1-A Missile Facility (i.e., the Site; **Figure 1**) Formerly Used Defense Site (FUDS) property number J09CA1108. Work was performed under Contract W91238-21-D-0008 according to the *Work Plan / Uniform Federal Policy - Quality Assurance Project Plan* (UFP-QAPP) (Parsons 2024a).

USACE is the Department of Defense's (DoD) executing agent for environmental restoration at FUDS, under the Defense Environmental Restoration Program, and is addressing HTRW releases at the properties affected by contaminants that were released at the former Titan 1-A Missile Facility (**Figure 2**). This HTRW project is being conducted as part of a Remedial Investigation/Feasibility Study and is regulated under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980 and the Superfund Amendments and Reauthorization Act of 1986 (42 United States Code 9601 et seq.), and applicable State requirements.

This report documents the installation and development of 5 groundwater monitoring wells, the collection of groundwater samples from 33 groundwater monitoring wells, the installation of 10 soil vapor monitoring probes, and the collection of soil vapor samples from 31 soil vapor monitoring probes.

A summary of analysis and detections in groundwater is included in **Table ES-1** below.

Table ES-1. Summary Statistics for Groundwater Detections and Screening Level Exceedances

Groundwater Compounds	Count of Samples Analyzed (excluding duplicates)	Count of Analyte Detections[1]	Count of Analyte Detections Greater than the Screening Level[1]
1,1-Dichloroethene (1,1-DCE)	33	0	0
1,4-Dichlororobenzene (1,4-DCB)	33	0	0
Benzene	33	0	0
Cis-1,2-Dichloroethene (DCE)	33	24	1
Ethylbenzene	33	0	0
M,p-Xylene	33	0	0
O-Xylene	33	0	0
Toluene	33	0	0
Trans-1,2-DCE	33	8	0

Table ES-1. Summary Statistics for Groundwater Detections and Screening Level Exceedances

Groundwater Compounds	Count of Samples Analyzed (excluding duplicates)	Count of Analyte Detections[1]	Count of Analyte Detections Greater than the Screening Level[1]
TCE	33	26	23
VC	33	1	1

[1] Considers both primary and duplicate analysis, but only counts the higher detection.

A summary of analysis and detections in soil vapor is included in Table ES-2 below.

Table ES-2. Summary Statistics for Soil Vapor Detections and Screening Level Exceedances

Soil Vapor Compounds	Count of Samples Analyzed (excluding duplicates)	Count of Analyte Detections[1]	Count of Analyte Detections Greater than the Screening Level[1]
1,1-DCE	31	0	0
1,4-DCB	31	0	0
Benzene	31	13	6
Cis-1,2-DCE	31	2	0
Ethylbenzene	31	13	0
M,p-Xylene	31	24	0
O-Xylene	31	15	0
Toluene	31	20	0
Trans-1,2-DCE	31	0	0
TCE	31	21	14
VC	31	0	0

[1] Considers both primary and duplicate analysis, but only counts the higher detection.

1.1 Purpose and Objectives

The purpose of this report is to present the data and results of semi-annual groundwater and soil vapor sampling; the installation and development of new monitoring wells; and the installation of new soil vapor probes. This report includes the following:

1. Investigation Activities
   - Groundwater Monitoring Well Installation and Development
   - Groundwater Sampling
   - Soil Vapor Probe Installation
   - Soil Vapor Sampling
   - Investigation-Derived Waste (IDW) Generation and Sampling
2. Investigation Results
   - Groundwater Elevations and Gradients
   - Groundwater Quality Parameters
   - Groundwater Analytical Results
   - Soil Vapor Analytical Results
   - IDW Analytical Results and Management
3. Data Validation and Quality Control Assessment
   - Data Quality Statement
   - Deviations from the UFP-QAPP
4. Summary
5. Data Tables
6. Figures
7. Appendices

The objective of semi-annual groundwater sampling is to further delineate contaminants in the vicinity of the former Titan 1-A missile facility. The resulting data will be used to determine whether further delineation is necessary.

TCE and its daughter products were selected as contaminants of potential concern (COPCs) in the Continuing RI (Brown and Caldwell 2004). The Continuing RI summarized investigations completed prior to and during the Continuing RI and concluded that TCE and its daughter products (primarily cis-1,2-DCE) are the DoD-related COPCs that should be addressed under the FUDS program. Additional contaminants, including metals and PAHs were identified, but were not related to past DoD use and were, therefore, not identified as COPCs.

Low concentrations of benzene, toluene, ethylbenzene, and xylenes (BTEX) were also detected as part of the Continuing RI. The response to comments on the Continuing RI (see appendix of the Continuing RI for the responses to comments) and a subsequent underground storage tank (UST) investigation (Brown and Caldwell 2005) ruled out the former missile facility as the source of the BTEX, and suggested that Placer County's gasoline storage tanks may have been the potential source (Brown and Caldwell 2004). Although the former missile facility was ruled out as a source, BTEX was carried forward as COPCs in the 2007 FS and in subsequent investigations. 1,4-Dichlorobenzene was selected as a COPC as it was used by the DoD is a toilet deodorizer and wastewater containing 1,4-

dichlorobenzene was discharged by the DoD to the to the septic system leach field adjacent to the Placer County Corporation Yard (URS 2001). Based on these findings, and in accordance with the UFP-QAPP, the following COPCs have been retained as the basis for groundwater and soil vapor delineation parameters:

- 1,1-Dichlorethene
- 1,4-Dichlorobenzene
- Benzene
- cis-1,2-Dicholorethene
- Ethylbenzene
- m,p-Xylenes
- o-Xylene
- trans-1,2 Dichloroethane
- Trichloroethene
- Vinyl chloride

1.2 Report Organization

This report is organized as follows:

- Section 2 presents a summary of investigation activities
- Section 3 presents the results of the investigation; i.e., groundwater elevations, gradients, and the analytical results for groundwater, soil vapor, and IDW
- Section 4 presents a summary of data validation and deviations from the *Work Plan / Uniform Federal Policy - Quality Assurance Project Plan* (Parsons 2024a)
- Section 5 provides a summary of activities and findings
- Section 6 presents the reference list

2.0 2024S1 Investigation Activities

A nesting bird survey was performed five days before commencing intrusive work. On the first day of intrusive activities, field personnel attended an environmental awareness training. All intrusive activities at the Site were overseen by a biological monitor with stop work authority. Biological monitoring reports are provided in **Appendix G**.

2.1 Groundwater Monitoring Well Installation and Development

Following the UFP-QAPP (Parsons 2024a), five groundwater monitoring wells (MW-61, MW-62, MW-63, MW-64 and MW-66) were installed between May 21st and May 28th, 2024, at the former Titan 1-A Missile Facility. The locations of the monitoring wells are shown in **Figure 3**.

MW-65 was planned to be installed on the parcel to the south of MW-64. However, that parcel is a conservation easement area. Pursuant to the easement, construction activity within the easement must be reviewed and approved by the Wildlife Heritage Foundation. By the time of field work, installation of MW-65 had not been approved by the Wildlife Heritage Foundation. Therefore, MW-65 was not installed.

All borings were installed with a Geoprobe direct-push technology/hollow-stem auger (DPT/HSA) drill rig using 8-inch diameter augers. Boring depths ranged from 28 to 30 feet bgs. All borings were continuously logged (**Appendix A**) by a geologist, who also oversaw well construction (see construction diagrams in **Appendix B** and well construction details in **Table 1**). Each monitoring well comprises a surface completion composed of neat cement with protective bollards, as necessary, a 2-inch diameter polyvinyl chloride (PVC) casing, a 10 ft long 2-inch diameter 0.02 inch slot PVC screen, #3 Sand well-screen filter pack (from approximately 2 feet above the top of screen to the bottom of screen), a 2 foot bentonite seal (composed of hydrated bentonite chips) above the filter pack, and neat cement grout slurry mix from the ground surface to the top of seal. A Placer County grout inspector was called for onsite inspections. The monitoring wells were completed as stick-ups with 8-inch outer diameter protective casings. Monitoring wells were developed (**Appendix C**) at least 24 hours after installation on May 28th and May 30th, 2024 via bailing, surging, and pumping. Development continued until the water was clear and free of fines, the turbidity was less than 10 nephelometric turbidity units (NTUs), or water quality parameters had stabilized; i.e., 3 consecutive readings were within stabilization criteria, as defined in Field Standard Operating Procedure (SOP) 02 in the UFP-QAPP (Parsons 2024a).

After installation and development, all wells were surveyed by R.E.Y. Engineers, Inc., a licensed California professional land surveyor. The survey results are provided in **Appendix D**.

2.2 Groundwater Sampling

During the 2024S1 monitoring event, depth to groundwater was measured from the surveyed measuring point on the north side of monitoring wells, using a Solinst water level meter at the existing monitoring wells on May 28th and from the newly installed monitoring wells (MW-61, MW-62, MW-63, MW-64 and MW-66) on June 3rd, 2024 (**Figure 3**). Following UFP-QAPP Section 18.6 (Parsons 2024a), depth to water was measured in monitoring wells MW-18, MW-31, MW-32, MW-33, and MW-34, but

groundwater samples were not collected from these wells. Groundwater samples were collected from the 5 newly installed wells, as well as 28 existing monitoring wells.

Groundwater samples were collected in general accordance with SOP 02 in the UFP-QAPP (Parsons 2024a). Water quality parameters were measured using a calibrated YSI ProDSS multiparameter water quality meter equipped with a flow-through cell, and recorded on sampling forms to verify stability (i.e. to ensure that formation groundwater at the screened interval was sampled). Once stability was achieved, groundwater samples were collected via bladder pump using low flow sampling methods between May 28th and June 3rd, 2024. For MW-58, there was insufficient volume to collect a sample using low flow methods and the sample was collected using a bailer. Groundwater sampling forms and calibration forms are presented in **Appendix E**.

A total of 37 groundwater samples, including 4 duplicate samples, were collected and handled in accordance with the UFP-QAPP Worksheets 26 and 27. Samples were shipped under chain of custody to EMAX Laboratories, Inc. at 3051 Fujita Street in Torrance, California. Shipping documentation, including the chain of custody, is included in the laboratory reports in **Appendix H**. Samples analyzed by U.S. Environmental Protection Agency (USEPA) Method 8260C for the following analytes:

- Benzene
- 1,4-Dichlorobenzene
- 1,1-Dichloroethene
- cis-1,2-Dichloroethene
- trans-1,2-Dichloroethene
- Ethylbenzene
- Toluene
- Trichloroethene
- Vinyl chloride
- m/p-Xylenes
- o-Xylene

EMAX Laboratories is a DoD ELAP accredited laboratory. EMAX Laboratories' accreditation is included in the UFP-QAPP Appendix G (Parsons 2024a).

2.3 Soil Vapor Probe Installation

Ten soil vapor probes (SV-27 though SV-35, with two probes at SV-32) were installed between May 29th and June 3rd, 2024. Five soil vapor probes were co-located with the wells installed in **Section 2.1**; i.e., MW-61/SV-27, MW-62/SV-28, MW-63/SV-29, MW-64/SV-30, and MW-66/SV-35. The locations of the probes are shown in **Figure 4**. Probes were installed to depths range from 5.0 to 11 feet below ground surface (ft bgs).

Soil vapor probes wells were installed using a Geoprobe DPT rig. Once the total depth was reached, new, disposable, 1/8-inch or 1/4-inch outside diameter Teflon tubing, fitted with a filter at the bottom to prevent particulate infiltration, was extended to the target depth and fitted with a soil vapor probe

tip with a 1-inch screen at the end. A 12-inch sand filter pack was placed in the boring, with the soil vapor probe placed midway through the filter pack sand. Following the installation of the sand pack, dry granular bentonite was emplaced between the sand pack and the hydrated bentonite grout to prevent infiltration of the hydrated bentonite or bentonite grout into the sand pack. The borehole was grouted to the surface in approximately 6-inch lifts with hydrated bentonite. A valve was fitted to the aboveground end of the tubing and was kept closed prior to purging and sampling. Following installation, soil vapor probes were finished with a lockable, aboveground stick-up casing . The stick-up was protected by up to four yellow bollards set in concrete, as necessary.

All borings were continuously logged (**Appendix A**) by a geologist, who also oversaw soil vapor probe construction (see construction diagrams in **Appendix B** and soil vapor probe construction details in **Table 2**).

2.4 Soil Vapor Sampling

Soil vapor samples were collected in SUMMA canisters from each probe (**Figure 4,**) following Field SOP 05 (Parsons 2024a). Soil vapor sampling forms are presented in **Appendix E**. Prior to purging or sampling, a shut-in test was performed to verify the integrity of the above-ground sampling system by assembling the entire above-ground sampling apparatus downstream from the top of the probe tubing. The system was evacuated to a vacuum of about 100 inches of water using the purge pump, and the vacuum gauge was observed for at least one minute to confirm that there was no observable loss of vacuum Prior to collecting soil vapor samples, a helium leak test was performed to verify the integrity of each probe by placing a shroud over the soil vapor probe and filling the shroud with approximately 10% by volume of helium. Helium was then measured in the sampling train using a hand-held helium meter. If helium was present at less than 5% of the concentration in the shroud, then the probe was considered to have passed the leak test and soil vapor samples were collected. Samples were collected following these procedures at 31 locations.

A total of 35 soil vapor samples including 4 duplicate samples, were collected and handled in accordance with UFP-QAPP worksheets 26 and 27. Samples were transported under chain of custody to Eurofins Air Toxics, LLC at 180 Blue Ravine Road, Suite B in Folsom, California. Shipping documentation, including the chain of custody, is included in the laboratory reports in **Appendix H**. Samples analyzed by USEPA Method TO-15 for the following analytes:

- Benzene
- 1,4-Dichlorobenzene
- 1,1-Dichloroethene
- cis-1,2-Dichloroethene
- trans-1,2-Dichloroethene
- Ethylbenzene
- Toluene
- Trichloroethene
- Vinyl chloride

- m/p-Xylenes
- o-Xylene

Eurofins Air Toxics is a DoD ELAP accredited laboratory. Eurofins Air Toxics' accreditation is included in the UFP-QAPP Appendix G (Parsons 2024a).

2.5 Investigation-Derived Waste Generation and Sampling

Soils, water, and sampling related debris was generated over the course of the investigation and managed as IDW. IDW was temporarily staged in 55-gallon drums within the Placer County Corporation Yard.

Samples were collected from each drum and composited into one sample. Solid and liquid IDW samples were sent to EMAX Laboratories, Inc. at 3051 Fujita Street in Torrance, California for analysis for:

- Volatile organic compounds (VOCs) via USEPA Method SW8260C
- Total metals via USEPA Method SW6010C/7470A/7471B
- Toxicity Characteristic Leaching Procedure and/or Soluble Threshold Limit Concentration for the above, if necessary

The IDW drums are currently staged in the Placer County Corporation Yard. The IDW drums will be disposed of during the next sampling event, currently scheduled for December 2024.

Field notes are presented in **Appendix F**.

3.0 2024S1 Investigation Results

3.1 Groundwater Elevations and Gradients

Groundwater elevation measurements were taken from each of the 38 monitoring wells, with groundwater elevations ranging from 175.51 to 210.39 feet above mean sea level (amsl), or 2.64 to 25.31 ft bgs (**Table 3**). The elevation measurements were used to calculate the direction and gradient of groundwater flow (**Figure 5**). Groundwater generally flows to the west-southwest across the site.

Hydraulic gradient was calculated using wells MW-30 to MW-16 (northern portion of Site) and MW-51 to MW-63 (southern portion of Site; **Figure 5**). Hydraulic gradient ranges from 0.021 ft/ft in the northern portion of the Site, to 0.012 ft/ft in the eastern portion of the Site.

3.2 Groundwater Quality Parameters

Groundwater quality parameters were measured and recorded during well development and purging. Parameters were measured at each monitoring well: a) during development to ensure that each well was properly installed and is appropriately interacting with the intended aquifer(s) and, b) that each sample was collected from groundwater that is representative of the aquifer (and not stagnant water in the well). Groundwater quality parameters measured include temperature, electrical conductivity (EC), dissolved oxygen (DO), pH, oxidation-reduction potential (ORP), and turbidity. A well was considered to be developed when either a) the turbidity was less than 10 NTUs, or b) three consecutive readings for temperature, pH, and conductivity were within 10% (i.e., had stabilized). Well development forms are presented in **Appendix C**.

Prior to sampling, each monitoring well was purged until water quality measurements stabilized to ensure that the groundwater samples would be collected from the groundwater in the screened interval of the aquifer. For sampling, groundwater quality was considered stable when three consecutive readings of each parameter met the following criteria: pH (±0.2 units), EC (±3%), ORP (±20 millivolts [mv]), DO (±10% or ±0.2 mg/L, whichever is greater), and turbidity (±10% or ±1 NTU). Groundwater sampling forms document the groundwater quality parameters measured during sampling and are presented in **Appendix E**. Water quality parameters measured to be representative of the aquifer after stabilization are presented in **Table 4**. For MW-58, there was insufficient volume to collect a sample using low flow methods and the sample was collected using a bailer, concentrations shown in **Table 4** are representative of the sample collected.

3.3 Groundwater Analytical Results

During the 2024S1 groundwater monitoring event, groundwater samples were collected at 33 wells between May 28th and June 3rd, 2024. The groundwater analytical results were compared to the screening levels presented in **Table 5a**. Analytical results are presented in **Table 6a**, and the analytical laboratory reports are provided in **Appendix H**.

1,4-Dichlorobenzene, benzene, ethylbenzene, m,p-xylenes, o-xylene and toluene were non-detect in all 33 wells. The remaining analytes were detected as follows:

- 1,1-Dichoroethene
  - Detected above the screening level (6.0 µg/L): no wells
  - Detected below the screening level (6.0 µg/L): one well (MW-43)
- cis-1,2-Dichoroethene
  - Detected above the screening level (6.0 µg/L): one well (EW-1)
  - Detected below the screening level (6.0 µg/L): 20 wells
- trans-1,2-Dichoroethene
  - Detected above the screening level (10 µg/L): no wells
  - Detected below the screening level (10 µg/L): 7 wells
- Trichloroethene
  - Detected above the screening level (5 µg/L): 17 wells
  - Detected below the screening level (5 µg/L): 6 wells.
- Vinyl chloride
  - Detected above the screening level (0.50 µg/L): no wells
  - Detected below the screening level (0.50 µg/L): one well (MW-45)

Figure 6 shows the detected concentrations of trichloroethene (TCE) and cis-1,2-dichloroethene (DCE) in groundwater in the vicinity of the former Titan 1-A missile facility. TCE isoconcentration contours are also shown on **Figure 6**. The TCE isoconcentration contours shown are interpolations predicted using state-of-the-practice mathematical models. The approximated concentration contours are only intended to provide a rough visualization of the approximated concentration boundaries.

3.4 Soil Vapor Analytical Results

During the 2024S1 soil vapor monitoring event, soil vapor samples were collected from 31 soil vapor probes (locations shown on **Figure 4**) between May 28th and June 6th, 2024. The soil vapor analytical results were compared to the screening levels presented in **Table 5b**. Analytical results are presented in **Table 6b**, and the analytical laboratory reports are provided in **Appendix H**. The TCE and benzene analytical results are shown on **Figure 7** and **Figure 8**, respectively.

1,1-Dichloroethene, 1,4-dichlorobenzene (DCB), trans-1,2-DCE, and VC were non-detect in all soil vapor probes. The remaining analytes were detected as follows:

- Benzene:
  - Detected above the screening level (12 µg/m^3): 5 soil vapor probes
  - Detected below the screening level (12 µg/m^3): 6 soil vapor probes
- cis-1,2-Dichoroethene:
  - Detected above the screening level (1,400 µg/m^3): no soil vapor probes

  - Detected below the screening level (1,400 µg/m³): 2 soil vapor probes
- Ethylbenzene
  - Detected above the screening level (37 µg/m³): no soil vapor probes
  - Detected below the screening level (37 µg/m³): 11 soil vapor probes
- m,p-Xylene
  - Detected above the screening level (3,500 µg/m³): no soil vapor probes
  - Detected below the screening level (3,500 µg/m³): 20 soil vapor probes
- o-Xylene
  - Detected above the screening level (3,500 µg/m³): no soil vapor probes
  - Detected below the screening level (3,500 µg/m³): 12 soil vapor probes
- Toluene
  - Detected above the screening level (170,000 µg/m³): no soil vapor probes
  - Detected below the screening level (170,000 µg/m³): 15 soil vapor probes
- Trichloroethene
  - Detected above the screening level (16 µg/m³): 12 soil vapor probes
  - Detected below the screening level (16 µg/m³): 7 soil vapor probes

In SV-32 (located near the center of the northern plume area defined by the isoconcentration contours on **Figure 7**), soil vapor was sampled at 5.0 and 9.0 ft bgs to evaluate whether the source of TCE in soil vapor was the result of TCE in groundwater or from a shallower source. Trichloroethene was detected at much higher concentrations in the shallow sample (SV-32A, 2,900 µg/m³) than in the deep sample (SV-32B, 9.2 µg/m³), indicating that the source of TCE is unlikely to be groundwater in this area.

Figure 7 shows the extent of TCE[1] and **Figure 8** shows the extent of benzene in soil vapor in the vicinity of the Titan 1-A missile facility. The isoconcentration contours shown are interpolations predicted using state-of-the-practice mathematical models. The approximated concentration contours are only intended to provide a rough visualization of the approximated concentration boundaries. Benzene isoconcentration contours for soil vapor are not shown given the limited data present and, given the large degree of uncertainty, need further corroboration before modeling (predicting) spatial concentrations.

[1] Note that the extent of the TCE soil vapor plume shown in Figure 7 is misleading as the soil vapor probes were installed at different depths but the results are combined in Figure 7 to develop a single set of contours; i.e., some probes are right above groundwater and some are separated from groundwater by a clay layer or approximately 10 feet or soil. This is discussed in more detail in the Remedial Investigation (Parsons 2024b).

3.5 IDW Results and Management

Throughout the investigation, waste was created from a) installing and developing monitoring wells in May 2024, b) installing soil vapor probes in May 2024, and c) sampling monitoring wells in May/June 2024. Waste was created as both solid (soil cuttings) and liquid (development and purge water). In total, ten (10) drums of soil cuttings and seven (7) drums of development/purge water were created.

Based on the analytical results (see **Appendix H**), all of the IDW is non-hazardous. The IDW drums are currently staged in the Placer County Corporation Yard. The IDW drums will be disposed of during the next sampling event, currently scheduled for December 2024. A waste disposal facility has not yet been contracted.

The IDW tracking log is presented in **Appendix J**.

4.0 Data Validation and Quality Control Assessment

4.1 Data Validation

As part of the quality control procedures, a) 100% of the IDW data was subject to a Stage 1 data review and b) 100 percent of the project data was subject to a Stage 2B data review and 10 percent of the data was subject to a Stage 4 data review to verify data are of known quality and are compliant with the criteria in the UFP-QAPP (Parsons 2024a).

During the 2024S1 monitoring event, four groundwater duplicates and four soil vapor duplicates were collected. Relative percent differences (RPD) were within Quality Control (QC) limits for all sets of duplicates. Four trip blanks were collected and analyzed for volatile organic compounds (VOCs). All trip blanks had detections for toluene, but the associated sample results were non-detects for toluene; therefore, data quality was not impacted, and results were not qualified. One equipment blank and one rinsate blank were collected and analyzed for VOCs and results were non-detect for all target analytes.

Data validation reports for the 2024S1 sampling event are provided in **Appendix I**. All data are considered acceptable and suitable for use.

4.2 Data Usability Assessment

As noted in **Section 4.1**, all of the data validated are suitable for their intended use. No systematic accuracy or precision biases were identified, and no sample results were rejected. Sample results that were qualified as estimated are usable for project decisions. Decisions based on results close to the limit of detection (LOD) should be made with a degree of caution.

The LODs were below the Project Screening Levels (PSLs) from the UFP-QAPP for all analytes in all samples, except as shown below in **Table 7**.

Table 7. Summary of Non-Detects with LODs Greater than PSLs

Matrix	Analyte	units	PSL	#NDs	Range LODs	#NDs>PSL
GW	Vinyl chloride	µg/L	0.019	36	0.3-0.3	36
SV	Benzene	µg/m^3	12	22	2.8-17	3
SV	Vinyl chloride	µg/m^3	5.6	35	2.2-14	4

Definitions:
GW: groundwater
SV: soil vapor
LOD: limit of detection
PSL: project screening level
ND: non-detect

In soil vapor, the non-detects for benzene and vinyl chloride with LODs above the project screening levels were in SV-1, SV-22, and SV-24. In these soil vapor probes, TCE was detected at above 6,000 µg/m^3 requiring dilutions that resulted in the elevated LODs; i.e., it is not possible to detected benzene and vinyl chloride at the project screening level in these probes. The LOD for vinyl chloride in soil vapor was also elevated in SV-29. In groundwater, the LOD for vinyl chloride was above the project screening level in all non-detects.

4.3 Deviations from the Quality Assurance Project Plan

The sample taken from MW-58 was a grab sample as no water could be purged by a bladder pump. Therefore, water quality parameters were not allowed to stabilize and a grab sample was collected using a bailer. Data from MW-58 may not be representative of steady state conditions and should be evaluated with caution.

MW-65 was not installed, as described in Section 2.1.

SV-11, SV-12, and SV-21 were not sampled. Soil vapor probes SV-11 and SV-12 were unable to be sampled as water was purged from the sample lines for an extended period. A soil vapor sample was attempted at SV-21, but soil vapor was unable to be drawn due to high vacuum.

5.0 Summary

During the 2024S1 monitoring event, five monitoring wells were installed (MW-61, MW-62, MW-63, MW-64 and MW-66). MW-65 was not installed due to lack of approval by the by the Wildlife Heritage Foundation.

Groundwater elevation measurements were taken from each of the 38 monitoring wells, with groundwater elevations ranging from 175.51 to 210.39 feet amsl, or 2.64 to 25.31 ft bgs. Groundwater generally flows to the west-southwest across the site (**Figure 5**).

Groundwater samples were collected from 33 wells between May 21st and June 3rd, 2024. 1,4-Dichlorobenzene, benzene, ethylbenzene, m,p-xylenes, o-xylene and toluene were non-detect in all 33 wells. Of the detected analytes, only cis-1,2-DCE and TCE were detected above screening levels, with cis-1,2-DCE detected above the screening level of 6.0 µg/L in 1 well (EW-1) at 11 µg/L and TCE detected above the screening level of 0.49 µg/L in 17 wells between 2.0 and 320 µg/L (**Figure 6**).

During the 2024S1 monitoring event, ten soil vapor probes were installed (SV-27 though SV-35, with two probes at SV-32). Soil vapor samples were collected from 31 soil vapor probes between May 28th and June 6th, 2024. Soil vapor probes SV-11, SV-12, and SV-21 could not be sampled. 1,1-Dichloroethene, 1,4-DCB, trans-1,2-DCE, and VC were non-detect in all soil vapor probes. Of the detected analytes, only benzene and TCE were detected above screening levels, with benzene detected above the screening level of 12 µg/m^3 in 5 soil vapor probes between 13 and 86 µg/m^3 (**Figure 8**) and TCE detected above the screening level of 16 µg/m^3 in 12 soil vapor probes between 23 and 7,200 µg/m^3 (**Figure 7**[2]). In SV-32, soil vapor was sampled at 5.0 and 9.0 ft bgs to evaluate whether the source of TCE in soil vapor was the result of TCE in groundwater or from a shallower source. TCE was detected at much higher concentrations in the shallow sample (SV-32A, 2,900 µg/m^3) than in the deep sample (SV-32B, 9.2 µg/m^3), indicating that the source of TCE is unlikely to be groundwater in this area.

All IDW is non-hazardous and will be disposed of during the next sampling event, currently scheduled for December 2024.

During this sampling event, the following deviations from the UFP-QAPP were noted:

- The sample taken from MW-58 was a grab sample as no water could be purged by a bladder pump.
- MW-65 was not installed, as described in **Section 2.1**.
- SV-11, SV-12, and SV-21 were not sampled.

[2] Note that the extent of the TCE soil vapor plume shown in Figure 7 is misleading as the soil vapor probes were installed at different depths but the results are combined in Figure 7 to develop a single set of contours; i.e., some probes are right above groundwater and some are separated from groundwater by a clay layer or approximately 10 feet or soil. This is discussed in more detail in the Remedial Investigation (Parsons 2024b).

Definitions:

amsl - above mean sea level
bgs - below ground surface
btoc - below top of casing
DO - dissolved oxygen
EC - electrical conductivity
mS/cm - milliSiemens per centimeter
NTU - Nephelometric Turbidity Units
ORP - oxidation-reduction potential

Table 5a. Project Screening Levels (Groundwater)

Analyte	CAS Number	Units	USEPA RSL	DTSC-SL	CA MCL	PSL[1]	PSL Reference
1,1-Dichloroethene	75-35-4	µg/L	280	130	6.0	6.0	CA MCL
1,4-Dichlorobenzene	106-46-7	µg/L	0.48	-	5.0	5.0	USEPA RSL
Benzene	71-43-2	µg/L	0.46	0.15	1.0	1.0	USEPA RSL
cis-1,2-Dichloroethene	156-59-2	µg/L	25	12	6.0	6.0	CA MCL
Ethylbenzene	100-41-4	µg/L	1.5	-	300	300	USEPA RSL
m,p-Xylene	179601-23-1	µg/L	190	-	1,750	1,750	USEPA RSL
o-Xylene	95-47-6	µg/L	190	-	1,750	1,750	USEPA RSL
Toluene	108-88-3	µg/L	1,100	410	150	150	CA MCL
trans-1,2-Dichloroethene	156-60-5	µg/L	68	110	10	10	CA MCL
Trichloroethene	79-01-6	µg/L	0.49	-	5.0	5.0	USEPA RSL
Vinyl chloride	75-01-4	µg/L	0.019	0.0098	0.50	0.50	USEPA RSL

Notes:

1 - The PSL is the USEPA RSL. If there is no USEPA RSL, the DTSC-SL is used. If the CA MCL is lower than the selected value, the CA MCL is used instead.

Definitions:

CA MCL - California Maximum Contaminant Level.
https://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/MCLsandPHGs.html.
Accessed 26 July 2024

DTSC-SL = California Department of Toxic Substances Control May 2022 tapwater screening levels.

PSL - Project Screening Level

USEPA RSL = USEPA May 2024 tapwater Regional Screening Level. Target HQ = 1.

Table 5b. Project Screening Levels (Soil Vapor)

Analyte	CAS Number	Units	USEPA VISL	DTSC-SL[1]	PSL[2]	PSL Reference
1,1-Dichloroethene	75-35-4	µg/m^3	7,000	2,433	7,000	USEPA VISL
1,4-Dichlorobenzene	106-46-7	µg/m^3	8.5	-	8.5	USEPA VISL
Benzene	71-43-2	µg/m^3	12	3.2	12	USEPA VISL
cis-1,2-Dichloroethene	156-59-2	µg/m^3	1,400	277	1,400	USEPA VISL
Ethylbenzene	100-41-4	µg/m^3	37	-	37	USEPA VISL
m,p-Xylene	108-38-3	µg/m^3	3,500	-	3,500	USEPA VISL
o-Xylene	95-47-6	µg/m^3	3,500	-	3,500	USEPA VISL
Toluene	108-88-3	µg/m^3	170,000	10,000	170,000	USEPA VISL
trans-1,2-Dichloroethene	156-60-5	µg/m^3	1,400	2,767	1,400	USEPA VISL
Trichloroethene	79-01-6	µg/m^3	16	-	16	USEPA VISL
Vinyl chloride	75-01-4	µg/m^3	5.6	0.32	5.6	USEPA VISL

Notes:

1 - DTSC-SLs have been divided by default USEPA (2015) attenuation factor of 0.03, which is equivalent to the method used to derive USEPA VISLs.

2 - The PSL is the USEPA VISL. If no USEPA RSL is abailable, the DTSC-SL is used.

Definitions:

DTSC-SL = California Department of Toxic Substances Control May 2022 residential air screening levels

PSL - Project Screening Level

USEPA VISL = USEPA residential sub-slab soil gas vapor intrusion screening level (target HQ = 1). Calculated 28 December 2023.

References:

USEPA (U.S. Environmental Protection Agency). 2015. OSWER technical guide for assessing and mitigating the vapor intrusion pathway from subsurface vaporsources to indoor air. OSWER Publication 9200.2-154.

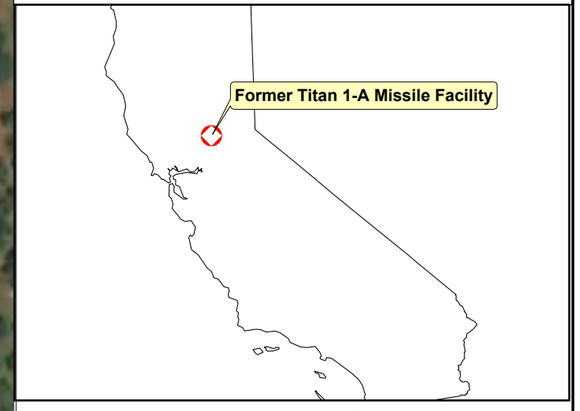
Figure 5



Groundwater Elevations and Contours
1st Semi-Annual Sampling Event 2024
Former Titan 1-A Missile Facility
Lincoln, California
FUDS Property No. J09CA1108

Legend

- Extraction Well
- Monitoring Well
- Ground water Elevation Contour (feet above mean sea level), dashed where estimated
- Direction of Groundwater Flow
- Parcel Boundary
- Ephemeral/Seasonal Streams and Surface Water Bodies
- Ephemeral stream
- Former Titan 1-A Missile Facility / FUDS Boundary

Note:
Groundwater Elevations are in feet above mean sea level.
The groundwater elevation contours and groundwater flow directions are from:
1st Semi-Annual Sampling Event 2024.
Beale Air Force Base (AFB) Former Titan 1-A Missile Facility, Formerly Used Defense Site (FUDS), Placer County, Lincoln, California
FUDS Project J09CA1108-01.

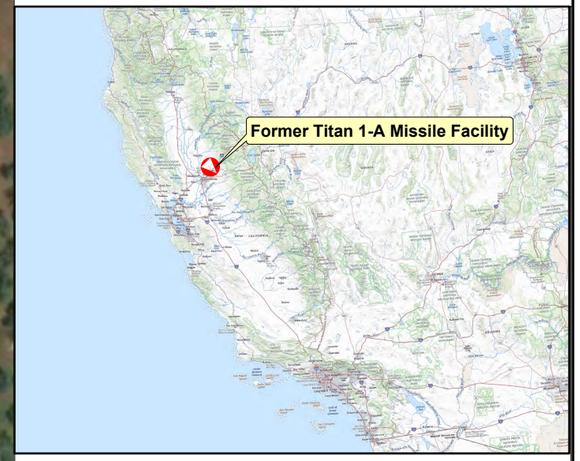
Figure 6

Trichloroethene and cis-1,2-Dichloroethene in Groundwater, 1st Semi-Annual Sampling Event 2024 Former Titan 1-A Missile Facility Lincoln, California FUDS Property No. J09CA1108



Legend

- Extraction well
- Monitoring Well

Trichloroethene (TCE) and cis-1,2-dichloroethene (DCE) concentrations shown below the extraction/monitoring well ID in µg/L. Results greater than the California Maximum Contaminant Level for TCE (5 ug/L) or cis-1-2-DCE (6 ug/L) are shown in yellow.

- TCE Isoconcentration line (µg/L), dashed where inferred
- Parcel Boundary
- Ephemeral/Seasonal Streams and Surface Water Bodies
- Ephemeral stream

Note:
Isoconcentration contours are interpolations predicted using state-of-the-practice mathematical models — they are modeled (approximated) concentration contours and are only intended to provide a rough visualization of the approximated concentration boundaries.
Contours are dashed where inferred.
The concentrations provided as #/# are the normal sample result followed by the field duplicate result.
J = Estimated value
U = not detected at the indicated Limit of Detection

Site Location in California

Figure 7

Trichloroethene in Soil Vapor, 1st Semi-Annual Sampling Event 2024 Former Titan 1-A Missile Facility Lincoln, California FUDS Property No. J09CA1108

Legend

- Soil Vapor Probe. Trichloroethene concentration shown below soil vapor probe ID in µg/m^3. Results greater than the vapor intrusion screening level of 16 µg/m^3 are shown in yellow.
- TCE Isoconcentration line (µg/m^3), dashed where inferred
- Parcel Boundary
- Ephemeral/Seasonal Streams and Surface Water Bodies
- Ephemeral stream
- Former Titan 1-A Missile Facility / FUDS Boundary

Note:
Isoconcentration contours are interpolations predicted using state-of-the-practice mathematical models — they are modeled (approximated) concentration contours and are only intended to provide a rough visualization of the approximated concentration boundaries. A dashed contour is drawn to show the inferred TCE concentrations.
The concentrations provided as #/# are the normal sample result followed by the field duplicate result.

Appendix B – Monitoring Well and Soil Vapor Probe Construction Diagrams

CONTRACTOR	WELL NUMBER	Date
Parsons	MW-61	5/22/24

Groundwater Monitoring Well Completion Data Record

PROJECT : Semi-Annual Groundwater & Soil Vapor Sampling at Former Titan 1-A Missile Facility
LOCATION: Lincoln, California
DRILLING SUBCONTRACTOR: Cascade
DRILLER: AA. Sanchez
DRILLING METHOD / EQUIPMENT: DPT/HSA
HELPERS: AC. Moreno
WATER LEVEL: 15.4 ft bgs (static) START: 5/22/24 END: 5/22/24
GEOLOGIST: AA.Pimentel

1- Ground elevation at well : 200.54 feet

2- Measuring point elevation : top of the casing - north side

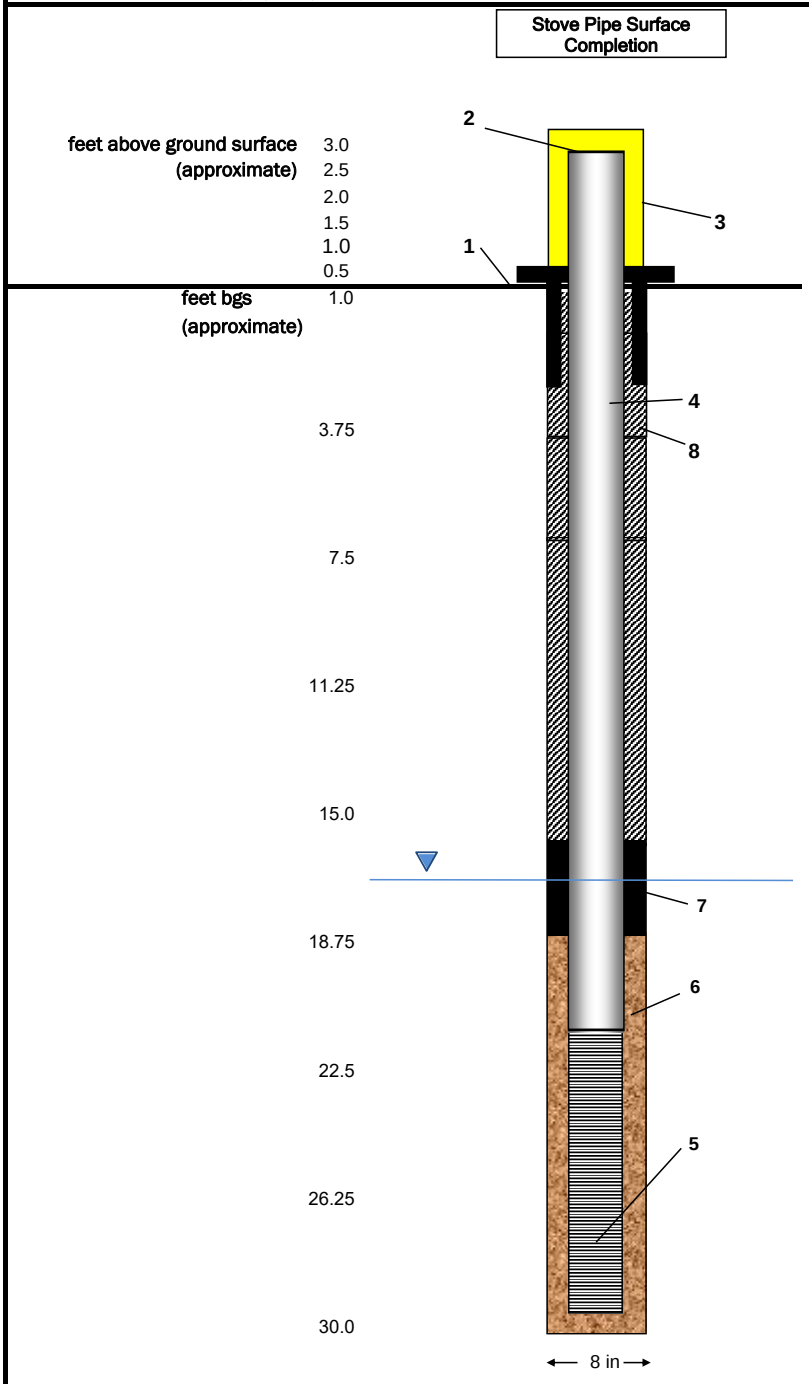
3- Surface completion casing :
- a) type / diameter: Monument - 8 inch OD
- b) type of sealant: Neat cement
- c) protective bollards: Yes

4- Well casing :
- a) type / diameter: Schedule 40 PVC / 2 inch ID
- b) height above ground: 2.5 feet
- c) length below ground: 19.6 feet
- d) well centralizers: None

5- Well screen :
- a) type / diameter: Schedule 40 PVC / 2 inch ID
- b) slot size: 0.02 inch
- c) top screen (feet bgs): 19.6 feet
- d) bottom screen (feet bgs): 29.6 feet

6- Well screen filter pack :
- a) type: #3 Sand
- b) top filter pack (feet bgs): 18 feet
- c) bottom filter pack (feet bgs): 30 feet

7- Bentonite seal :
- a) method of placement: Poured from surface
- b) type: Betonite chips (hydrated)
- c) top seal (feet bgs): 16 feet
- d) bottom seal (feet bgs): 18 feet



8- Grout :
- a) type: Neat cement
- b) grout mix: Grout slurry mix
- c) method of placement: Gravity Fed
- d) top grout (feet bgs): 0 feet
- e) bottom grout (feet bgs): 16 feet

9- Borehole diameter: 8 inches

CONTRACTOR	WELL NUMBER	Date

- a) type / diameter: Teflon Tubing- 0.25 inch OD
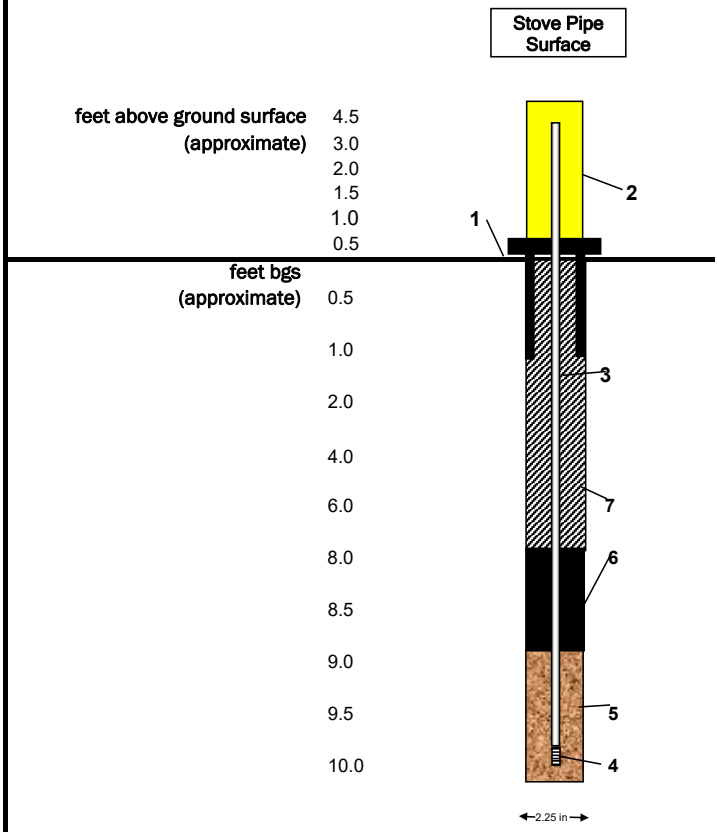
- b) height above ground: 4.5 feet
- c) length below ground: 9.5 feet

4- Probe screen :
- a) type / length: ESP Stainless Steel Soil Vapor Implant / 1 inch

5- Probe filter pack :
- a) type: #3 Sand
- b) top filter pack (feet bgs): 9 feet
- c) bottom filter pack (feet bgs): 10 feet

6- Dry Bentonite :
- a) method of placement: Gravity feed
- b) type: Bentonite Crumble
- c) top seal (feet bgs): 8 feet
- d) bottom seal (feet bgs): 9 feet



7- Bentonite grout :
- a) method of placement: Gravity feed
- b) type: Bentonite Crumble (hydrated)
- c) top seal (feet bgs): 0 feet
- d) bottom seal (feet bgs): 8 feet

8- Borehole diameter: 2.25 inch

RE: 401 Oak Tree Lane, Lincoln CA – Monitoring Well Survey - *Revised*

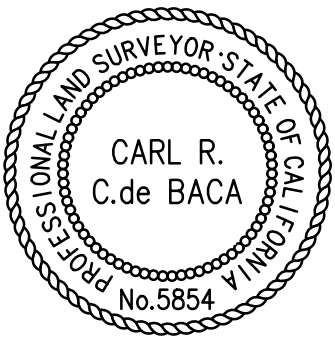
Dear Carrie,

Following is a statement regarding methods and accuracies for the Survey work completed by R.E.Y. field personnel on June 6, 2024. Please do not hesitate to contact me if you have any questions.

Surveyor's Statement

Survey Control was taken from the City of Lincoln Survey Control Survey filed for record in Book 23 of Survey at page 155 of the Placer County Records. Specifically Point No. 109, which is a Found 3" Brass Disk in a Monument Box stamped "City of Lincoln No. 109 GPS Control", which is behind the weather station at the project site, was used for horizontal and vertical control. The City of Lincoln Control Network is expressed in California State Plane NAD 83, Zone II grid coordinates with NAVD88 elevations.

Temporary control points were established on site and levels were run from No. 109 to this control. All well locations and ground shots were tied from this control using a Trimble 3" total station instrument in good adjustment.



All well casing locations were taken on the top of the PVC casing on the north side of the well. All ground shots were taken on the natural ground, NOT the concrete base of the well casing, as directed on site by Parson representatives.

This report provides the location information in both California State Plane NAD83 Zone II US Survey Feet and WGS84 Latitude and Longitude. The Elevations listed are NAVD88 as taken from the aforementioned Point No. 109. The vertical accuracy of this survey for the well casing points is hereby stated as ±0.01'. Of course, a ground point, which has vegetation, hardness or softness of surface and repeatability of horizontal location to take into account, will carry a somewhat lesser accuracy. For the purposes of this report we are certifying a vertical accuracy of ±0.05' for the ground shots.

See attached sheet two for reported horizontal and vertical information for the well site data collected on June 6, 2024.

Note: First asked client if peristaltic pump was an option after trying bladder pump and no water was being purged. Client confirmed peri-pump was ok for parameters and to use a bailer to collect sample.

MW-58

Peri-pump was set up, but no water coming up. Pulled up tubing, tubing was dry with roots on it. Sent bailer down ~ 1/6 of the bailer filled with water. I suspect roots in the well are impeding ~~purging~~ purging efforts.

Called client he ok'd using bailer for grab sample and set of parameters.

Appendix F – Field Notes

5/20/24 Titan 1-A MW/SV install

0735 Arrived @ St. Joseph Parking Lot

0738 Cascade Onsite

0800 USACE (Jessequa) & Condor Country biologist (Sam) arrived

0805 Held biological survey meeting followed by Tailgate safety meeting.

0810 Forklift delivered.

0810 Began mobilization to site; unload drilling

0900 Unload drums & park Truck & trailer @ Placer County lay down; Met with Bryan (Placer County) confirm location for drum storage, restroom usage & truck/trailer parking.

1100 Began mobilization to SV-33; USACE (Jesse) arrived on site & received safety & biological mtg.

1210 Crew to lunch

1240 Placer county grout inspector onsite (Paul)

1310 Begin SV-33 placement

1345 Reach depth of 10'

10'-9' Sand

@9.5' Probe tip

9'-8' Dry

8'- surface wet bentonite

monument 2' below

1533 Completed bollard placement @ SV-33

1540 Began site cleanup

5/20/24 cont.

1545 USACE (Jessequa) offsite

1555 Condor Country (Sann) offsite

1605 Cascade offsite

1610 Parsons locked County Laydown Yard Gate

A. Pruitt

Rite in the Rain

5/21/24 "Tiata 1-A MW/SV install

0700 Arrived onsite; Safety tailgate

715 Mobilized to MW-66

730 PID zero 0.0ppm / Bump 94.3ppm

0800 Began drilling @ MW-66

DPT 22 - for sampling 2.25" diameter

HSA - for drilling hole to set well

1035 Refusal of DPT @ 20'; need part to clear hole to continue sampling with HSA.

En route to site from Cascade in Sacramento

1100 Crew sent to lunch; Matt (USALE) onsite

1215 Part arrived, crew resumed drilling

1245 Paul Holloway (Placer county grout inspector) onsite

1300 Maddy Montgomery ( ) onsite

1500 Began setting well

1600 Well complete, ~~flooring bollards~~

1645 Clean up

1700 Offsite

*

6 5/22/24 Titan 1-A MW/SV Install

0700 Arrived; Safety Tailgate

0715 Mobilize to MW-61

0900 ~~Jessica~~ (USACE) onsite

0915 ~~Jessie~~ Tim/Katie (USACE) onsite; received safety/bio trainings.

0940 Began drilling @ MW-61

1100 Lunch

1300 Began setting well; Maddy (PE grout insp) onsite

1440 Well complete

1500 Began clean up & mobilization to MW-62

1600 Offsite

A. Rutt

5/23/24 Titan 1-A MW/SV install

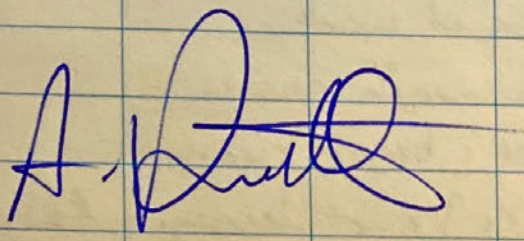
0700 Arrive onsite; safety tailgate prep & mobilize to MW-62

0815 Begin drilling @ MW-62

0900 Completed DPT sampling; began HSA to depth for install

1045 reached depth, began setting well

1210 lunch



1245 Grout well, Sent photos to inspector

1310 Place monument

1330 Decon equipment; mobilize to MW-63

1530 Sam (CC) offsite

1600 Offsite

Rite in the Rain®

8 5/24/24 Titan 1-A MW/SV install

0700 Arrived onsite ; safety tailgate

0715 Prep to move across stream

0800 Set up mats, move equipment to MW-63

0915 Resident (Paula) asked about activities and if any drilling will be done behind her house. Informed her no drilling behind her house. Gave her two copies of information handout

1100 Completed DPT, Began HSA

1200 lunch

1330 Began setting well

1345 Resident (Stan) came over to ask about progress of work.

1430 USACE Jessequa onsite

1450 Well set ; began cleanup

1600 Sam (CC) and Jessequa (USACE) offsite

1700 Offsite

5/28/24 Titan I-A MW/SV install/sampling

0700 Arrived onsite; safety tailgate; Bio-orientation for samplers, developer & new Parsons personnel

0745 Samplers depart to begin sampling
Move equipment to MW-64

0815 Begin DPT for logging

1130 Complete DPT, Lunch, Drillers noticed small leak and will get O-ring to replace damaged O-ring

1220 Replaced part

1230 Began HSA of MW-64

1315 Began setting well

1430 Grout

1445 Well complete

1545 Began clean up, GW Samplers offsite, Developer offsite

1600 Drillers, SV sampler, Parsons offsite

* See daily for SV & GW sampled for the day
- Ashleigh (Parsons) oversaw development, GW/SV sampling

A. Pruett

Rite in the Rain

10 5/29/24 Titan 1-A MW/SV install & sampling

0700 Arrived onsite ; Safety tailgate

0730 MW/SV samplers begin sampling
Set up for ~~SV~~ installation of SV-30

0~~825~~ Begin drilling

0952 Begin SV install

~~1000~~ ~~(Complete SV install ; Begin placing bellaid)~~

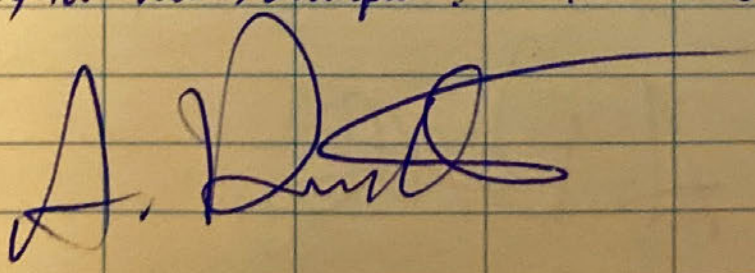
1030 Cristian (Blaine tech) offsite

~~1130~~ Complete SV install & bellard placement
Move to SV-29

1200 Chad (Cascade Developer) offsite

1300 Begin drilling at SV-29

1345 Begin SV install



1415 Complete SV install & bollard placement.

1430 Mobilize to SV-31
Clean up site

1615 Cascade, GW samplers, biologist offsite

1645 Parsons and SV sampler offsite.

* See daily for wells developed & MW/SV wells sampled.

5/30/24 Titan I-A MW/SV install & sampling

0700 Arrive onsite ; safety tailgate

0730 GW/SV samplers begin sampling

0800 Mobilize and set up @ SV-31

0915 Begin drilling

0955 Begin SV install

1048 SV install complete ; begin installing bollards

1200 Bollards installed, Lunch then mobilize to SV-32 a, b

1300 Begin drilling @ SV-32 a, b

1351 Begin SV install

1425 SV-32 a, b install complete

1430 Begin installing bollards

1520 Install complete ; clean up site mobilize to SV-28

1530 Chad (Cascade developer) offsite

1615 Drillers & MW sampler offsite

1700 Parsons & SV sampler offsite

* see daily for MW/SV sampled and wells developed. All wells developed.

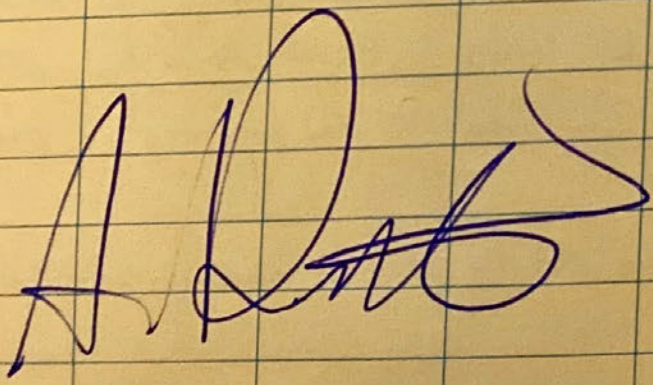
Rite in the Rain.

14 6/6/24 Titan 1-A MW/SV install & sampling

0700 Blumefield & Parsons onsite; safety tailgate

0715 Rex Engineers (Surveyors) onsite; safety tailgate



0730 SV sampler begins sampling; Walked site with surveyors

0815 Surveyors begin setting up control points & survey
Parsons takes IDW samples (soil & water)

1200 SV sampler offsite

1430 Surveyors offsite.

1700 Parsons offsite.

Appendix G – Biological Monitoring Reports

Daily Construction Monitoring Log v5

Date	05/15/2024
Type of Service	Preconstruction Nesting Bird Survey
Survey Conditions	
Project phase(s):	
Time on site:	07:05 AM
Time off site:	02:00 PM
Weather:	0705: 59°F, clear, winds 0 MPH 1335: 86°F, 36% humidity, winds 5 MPH
Monitor(s):	Sam McNally (SM)
Other Individuals Onsite	Arnold Pimentel (Parsons) Reed Parson (2M GE)
Number of Hours Condor Biologists Onsite	
Number of Hours of Other Personnel Onsite (Per Person) (Non-Condor)	
Safety tailgate training occurred prior to work activities?	true
Environmental training occurred prior to start of work activities?	true
Biological Observations	
Were there any special status species observed?	No
Notes About Observations	On May 15, 2024, Condor Country biologist Sam McNally (SM) conducted a preconstruction survey of the former Titan 1-A Missile Facility and surrounding study area to assess presence of nesting birds protected under the federal Migratory Bird Treaty Act of 1918 (MBTA) and the Bald and Golden Eagle Protection Act. Visual and auditory searches for active nests and nesting behavior were performed within the project area and surrounding 500 feet, focusing on areas of intrusive activities. Survey equipment consisted of 8x42 binoculars. The surveyor examined trees and shrubs within rhe area and along the perimeter, conducted periods of stationary observation in areas with good vantage points to watch for signs of nesting behavior, and walked transects through grassy areas. Trees on private property west of the study area were surveiled from within the study area via binoculars. The survey began at 0725 and concluded at 1400. The survey included focused surveys for burrowing owl (BUOW), modified from protocols developed by the California Burrowing Owl Consortium (CBOC 1993) and the California Department of Fish and Game (CDFG 2008 and 2012). RESULTS

Two active bird nests were identified in the southern study area in heavily wooded oak/ cottonwood habitat:

1) a cavity nest inhabited by European starlings (EUST; 38.876695, -121.269316), near the boundary of the Cal Sierra Limited Parcel and Sun City Lincoln Hills parcel. The nest tree is approximately 200 ft from proposed wells MW-64 and MW-65, and 180 ft from the nearest existing well, MW-19.

2) a cavity nest inhabited by acorn woodpeckers (ACWO; 38.875964, -121.266547), near the boundary of the Sun City Lincoln Hills parcel and Century Communities parcel. The nest tree is approximately 960 ft from the nearest spot of proposed intrusive activities (MW-65), and 330 ft from the nearest existing well, MW-33.

Neither nests are within 100 feet of planned intrusive activities, and are not likely to be disturbed by project activities. Furthermore, MBTA protections do not apply to European starlings or other non-native bird species in the United States (USFWS 2020).

Several inactive stick nests were observed in cottonwood trees along the creek in the southern portion, but none showed sign of current or recent activity.

No BUOW, nor evidence of BUOW, was observed in the survey area. No burrows greater than 4" in diameter were located, and culverts showed no signs of BUOW.

Project activities are unlikely to cause take of any migratory nesting bird species.

Project	Daily Monitoring Report
ID	449328
Survey Date	05/20/2024
User	Sam McNally
Date	05/20/2024
Type of Service	Biological Monitoring
Survey Conditions	
Project phase(s):	Construction monitoring
Time on site:	07:55 AM
Time off site:	04:00 PM
Weather:	0830: 61° F, 55% humidity, clear, winds 3-5 MPH 1600: 84° F, 17% humidity, wispy clouds, winds 5-10 MPH
Monitor(s):	Sam McNally (SM)
Other Individuals Onsite	Arnold Pimentel- Parsons Jessequa Parker - USACE Arturo Sanchez - Cascade Drilling Carlos Moreno - Cascade Drilling Jesse Stovall - USACE Paul Holloway - Placer County
Number of Hours Condor Biologists Onsite	8
Number of Hours of Other Personnel Onsite (Per Person) (Non-Condor)	8
Safety tailgate training occurred prior to work activities?	true
Environmental training occurred prior to start of work activities?	true
Biological Observations	
Were there any special status species observed?	No
Notes About Observations	No special status species observed. One new active Western Bluebird nest detected within FUDS boundary but it is >100 ft from any intrusive activities.
Reporting	
Were there any specific compliance requirements or concerns that need to be documented?	Yes

Is work occurring in response to a rain event?	No
Did any environmental training occur for on-site personnel?	Yes
Does any fencing, flagging or signage require maintenance?	No
Is equipment being staged in appropriate areas?	Yes
Were any hazardous material spills (eg fuels or lubricants) observed?	No
Were all vehicles and stockpiles of materials such as pipes or culverts inspected to assure wildlife was not underneath prior to use?	Yes
Notes/Other Observations:	0755: Biologist Sam McNally (SM) arrives at parking lot. 0800-0840: SM gives sensitive species awareness training. Arnold Pimentel (AP) gives safety tailgate. 0845-1030: SM conducts preliminary wildlife survey around staging area and MW-66, focusing on nests that may have become active since 5/15. A Western Bluebird nest appears active in a wooden nest box near the old fire station (adults seen bringing food into box) but as it is >100 ft from any planned or existing wells, project activities are not expected to affect the nest. 1030-1200: SM monitors during staging, mobilization, and vegetation clearance. 1200-1345: SM lunch break. 1345-1440: SM monitors during soil vapor probe drilling activities (SV-33) 1440-1540: SM checks for new nests near other soil vapor and monitoring well-drilling sites. No active nests observed. 1540-1600: SM monitors completion of SV-33 cap and bollards.
Species Occurring Onsite	*Ardea alba* / Great egret *Sialia mexicana* / Western bluebird *Charadrius vociferus* / Killdeer *Euphagus cyanocephalus* / Brewer's blackbird *Spinus psaltria* / Lesser goldfinch *Carpodacus mexicanus* / House finch *Branta canadensis* / Canada goose *Calypte anna* / Anna's hummingbird *Zenaida macroura* / Mourning dove *Sayornis nigricans* / Black phoebe *Sayornis saya* / Say's phoebe *Buteo jamaicensis* / Red-tailed hawk *Cathartes aura* / Turkey vulture *Petrochelidon pyrrhonota* / Cliff swallow *Aphelocoma californica* / Western scrub-jay *Tyrannus verticalis* / Western kingbird *Callipepla californica* / California quail *Sceloporus occidentalis* / Western fence lizard *Sturnus vulgaris* / European starling *Agelaius phoeniceus* / Red-winged blackbird

Safety tailgate training occurred prior to work activities?	true
Environmental training occurred prior to start of work activities?	false
Biological Observations	
Were there any special status species observed?	Yes
Special status species observed:	Nesting birds
Notes About Observations	An adult red-tailed hawk (RTHA) with a banded leg perched within the large oak tree nearest MW-64. A second RTHA was seen soaring in the west. Subsequently, an active RTHA nest with two chicks was detected (see notes below). The adults seen earlier are likely the pair tending the nest. A pair of Great horned owls (GHOW) and one fledged juvenile GHOW was observed in a tree (location: 38.876695, -121.269316). The juvenile is fully feathered and capable of flight. The location of the GHOW nest is not known, but is presumed now inactive due to

	the age of the juvenile. Thus, project activities are not expected to disturb incubation or chick rearing in the GHOW.
Location (first/last seen):	RTHA nest: In hardwood tree south of creek. 38.875706, -121.266972
Time sighted:	11:50 AM
Biologist contacted?	N/A
Explain why N/A:	Biologist made observation
Notes:	RTHA nest - approx 860 ft from nearest site of intrusive activities (MW-65), and 300 ft from MW-55. Location: 38.875706, -121.266972. Not likely to be disturbed by any project activities. 1150: RTHA nest with 2 chicks detected 1155: Adult RTHA observed feeding chicks. 1208: Adult returned to nest.
Incidental Take and Report Form filled out?	N/A
Explain:	

Reporting

Were there any specific compliance requirements or concerns that need to be documented?	No
Notes/Other Observations:	0700-0710: Tailgate safety meeting. 0710-0800: Field crew lays high density polypropylene (HDPE) mats across dry intermittent streambed and transports drill and equipment to MW-63 site. SM monitors and scans trees in the vicinity looking for disturbance. 0800-1130: SM monitors during drilling operations at MW-63. 1130-1215: SM surveys tree line along southern project edge. Red-tailed Hawk nest detected. 1215-1300: Lunch break. 1300-1430: SM continues nest survey in trees near MW-64 AND MW-65. Great horned owl juvenile and adults detected. 1540: Crew moves offsite. 1600: SM departs
Species Occurring Onsite	*Aphelocoma californica* / Western scrub-jay *Zenaida macroura* / Mourning dove *Sturnus vulgaris* / European starling *Spinus psaltria* / Lesser goldfinch *Agelaius phoeniceus* / Red-winged blackbird *Melanerpes formicivorus* / Acorn woodpecker *Carpodacus mexicanus* / House finch *Pseudacris sierra* / Sierran treefrog *Sayornis saya* / Say's phoebe *Bubo virginianus* / Great horned owl *Sceloporus occidentalis* / Western fence lizard *Lithobates catesbeianus* / American bullfrog *Sayornis nigricans* / Black phoebe *Callipepla californica* / California quail *Buteo jamaicensis* / Red-tailed hawk

Carrie Ross
Parsons

Subject: **Summary Monitoring Report: Biological Services.** Semi-Annual Groundwater and Soil Vapor Sampling at Former Titan 1-A Missile Facility, Lincoln, California

Dear Carrie Ross,

This summary report, prepared by Condor Country Consulting Inc. (CCCI), covers all survey and monitoring activities that occurred between May 15 and May 29, 2024, at the former Titan 1-A Missile Facility in Lincoln, California. All survey and monitoring was performed by USACE- and CDFW-approved monitor Sam McNally.

Pre-construction surveys
Pre-construction nesting bird surveys were conducted on May 15. Two active nests were detected and mapped: acorn woodpecker and European starling. Neither were within 100 feet of intrusive activities, and introduced European starlings are not protected under Migratory Bird Treaty Act. No burrowing owls, elderberry bushes, or vernal pool crustaceans were detected.

Daily monitoring
Daily biological monitoring was performed on May 20, 21, 22, 23, 24, 28, and 29, with daily reports submitted each day. All onsite personnel were given environmental training in sensitive resources on their first day of work. During monitoring, two new active bird nests were encountered incidentally but not within areas of intrusive activities: a western bluebird nest on May 20 over 100 ft from intrusive sites and a red-tailed hawk nest on May 24, over 800 ft from the nearest site of intrusive activities. No disturbance of any nest was observed, and no other special status species were encountered. All appropriate Avoidance and Minimization Measures were followed, including avoidance of wet weather work, avoidance of wetlands to the extent possible, and the placement of high-density polyethylene mats at perennial wetland crossings. No compliance violations were observed.

Please contact me if you have questions. I can be reached by phone at (925) 335-9308, or by email at sam@condorcountry.com.

Subject: Re: Titan 1-A GW samples SDG 24F003 Discrepancies

Hi Dilukshi,

See responses to questions below:

1. VOC analysis via SW8260 is the correct analysis for #1-#10
2. The 0(zero) should be included in the sample ID.

Thanks,

Arnold Pimentel

Subject: [EXTERNAL] RE: Titan 1-A GW samples SDG 24F003 Discrepancies

Hello Mark,

The following discrepancies were noted for SDG 24F003.

Analysis is not indicated on the label and COC for samples #1 - #10. Please confirm that the required analysis is VOCs via SW8260 for sample #1 - #10.
Sample ID mismatch for samples #1 - #17. Please advise if the "O" should be included in the sample ID.
COC: T1AMF-MW...
Label: T1AMF-MWO...

I have attached the COCs and SRFs for your reference.

Thank you!

Subject: RE: Titan 1-A GW samples - Saturday delivery?

I may have the quote for the Treatability Study. I did not see VOC on that quote. Do you have a PO for this or did we provide you a quote for the VOC only. On the QAPP it looks like a short list of analytes.

> You should have two POs for this contract… huh, I don't see one for the treatability study. Let me look into that
>
> The one that samples will be shipped to you under now is PO-0015461. See attached

Can you also let us know what level of data package you will need (II, III or IV) and what type of EDD(s). TAT 21days?

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than LOQ/RL but greater than LOD/MDL/DL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range or estimated value.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
MDL	Method Detection Limit
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

SUMMARY PACKAGE
VOLATILE ORGANICS

CASE NARRATIVE

Client : PARSONS

Project: TITAN 1-A

SDG : 24F003

METHOD SW5030C/8260C
VOLATILE ORGANICS BY GC/MS

A total of nineteen(19) water samples were received on 06/01/24 to be analyzed for Volatile Organics by GC/MS in accordance with Method SW5030C/8260C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. There were four(4)CCVs (Data File IDs: RFG062, RFG088, RFG092 and RFG119) associated with this SDG. All calibration requirements were satisfied. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, two(2) method blanks were analyzed. VOE2F03B and VOE2F04B were compliant to project requirement. Refer to sample result summary forms for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, two(2) sets of LCS/LCD were analyzed. VOE2F03L/VOE2F03C and VOE2F04L/VOE2F04C were within LCS limits. Refer to LCS summary forms for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Surrogate
Surrogates were added on QC and field samples. All surrogate recoveries were within QC limits. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

FORM 5

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK

BROMOFLUOROBENZENE (BFB)

Lab Name : EMAX Laboratories, Inc. Project : ICAL

Lab Code : EMAX SDG No : ICAL

Lab File ID: REG116 BFB Injection Date: 05/17/24

Instrument ID: E2 BFB Injection Time: 11:23

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15 - 40% of mass 95	20.276
75	30 - 60% of mass 95	50.050
95	Base Peak, 100% relative abundance	100.000
96	5 - 9% of mass 95	6.720
173	Less than 2% of mass 174	0.804(.96)1
174	Greater than 50% of mass 95	83.334
175	5 - 9% of mass 174	6.239(7.49)1
176	95 - 101% % of mass 174	81.293(97.55)1
177	5 - 9% % of mass 176	5.264(6.48)2

1-Value is % mass 174 2-Value is % mass 176

This check applies to the following Calibration Standards:

	EPA SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED	TIME ANALYZED

SECOND SOURCE VERIFICATION

FORM 5

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK

BROMOFLUOROBENZENE (BFB)

Lab Name : EMAX Laboratories, Inc. Project : ICAL

Lab Code : EMAX SDG No : ICAL

Lab File ID: REG130 BFB Injection Date: 05/18/24

Instrument ID: E2 BFB Injection Time: 09:16

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15 - 40% of mass 95	19.254
75	30 - 60% of mass 95	50.320
95	Base Peak, 100% relative abundance	100.000
96	5 - 9% of mass 95	6.311
173	Less than 2% of mass 174	0.512(.61)1
174	Greater than 50% of mass 95	84.221
175	5 - 9% of mass 174	6.661(7.91)1
176	95 - 101% % of mass 174	81.783(97.11)1
177	5 - 9% % of mass 176	6.306(7.71)2

1-Value is % mass 174 2-Value is % mass 176

This check applies to the following Calibration Standards:

	EPA SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED	TIME ANALYZED
1	VSTD10	IVOE2E1702	REG131	05/18/24	09:57

FORM 8
VOLATILE INTERNAL STANDARD AREA AND RETENTION TIME SUMMARY

Lab Name: EMAX Laboratories, Inc.
Lab Code: EMAX
Lab File ID: REG122
Instrument ID: E2

Project: TITAN 1-A
SDG No: 24F003
Date Analyzed: 05/17/24
Time Analyzed: 14:09

	INTERNAL STANDARD (IS)	1,4-DIFLUOROBENZENE		CHLOROBENZENE-D5		1,2-DICHLOROBENZENE-D4

VOLATILE ORGANICS

LABORATORY REPORT FOR

PARSONS

TITAN 1-A

METHOD SW5030C/8260C
VOLATILE ORGANICS BY GC/MS

SDG#: 24F003

CASE NARRATIVE

Client : PARSONS

Project: TITAN 1-A

SDG : 24F003

METHOD SW5030C/8260C
VOLATILE ORGANICS BY GC/MS

A total of nineteen(19) water samples were received on 06/01/24 to be analyzed for Volatile Organics by GC/MS in accordance with Method SW5030C/8260C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. There were four(4)CCVs (Data File IDs: RFG062, RFG088, RFG092 and RFG119) associated with this SDG. All calibration requirements were satisfied. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, two(2) method blanks were analyzed. VOE2F03B and VOE2F04B were compliant to project requirement. Refer to sample result summary forms for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, two(2) sets of LCS/LCD were analyzed. VOE2F03L/VOE2F03C and VOE2F04L/VOE2F04C were within LCS limits. Refer to LCS summary forms for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Surrogate
Surrogates were added on QC and field samples. All surrogate recoveries were within QC limits. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

Compound List Report E2

Method Path : C:\MSDCHEM\1\METHODS\
Method File : VOE2E17.M
Title : METHOD 8260B 10mL
Last Update : Tue May 21 20:44:17 2024
Response Via : Initial Calibration

Total Cpnds : 98

SECOND SOURCE VERIFICATION

FORM 5

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK

BROMOFLUOROBENZENE (BFB)

Lab Name : EMAX Laboratories, Inc. Project : ICAL

Lab Code : EMAX SDG No : ICAL

Lab File ID: REG130 BFB Injection Date: 05/18/24

Instrument ID: E2 BFB Injection Time: 09:16

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15 - 40% of mass 95	19.254
75	30 - 60% of mass 95	50.320
95	Base Peak, 100% relative abundance	100.000
96	5 - 9% of mass 95	6.311
173	Less than 2% of mass 174	0.912(.61)1
174	Greater than 50% of mass 95	84.221
175	5 - 9% of mass 174	6.661(7.91)1
176	95 - 101% % of mass 174	81.783(97.11)1
177	5 - 9% % of mass 176	6.306(7.71)2

1-Value is % mass 174 2-Value is % mass 176

This check applies to the following Calibration Standards:

	EPA SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED	TIME ANALYZED
1	VSTD10	IVOE2R1702	REG111	05/18/24	09:57

CERTIFIED REFERENCE MATERIAL

SM-38-10-B

Certificate of Analysis

chromatographic plus

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 30240 **Lot No.:** A0192204

Description : 8260A Surrogate Mix

8260A Surrogate Mix 2,500µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : December 31, 2027 **Storage:** 0°C or colder

Ship: Ambient

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Daniel Wasson - Operations Tech I

Date Mixed: 02-Dec-2022 **Balance Serial #** 1128342314

Christie Mills - Operations Tech II - ARM QC

Date Passed: 06-Dec-2022

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Certificate of Analysis

Date Received: 10/6/23

Catalog No.:	Lot No.:	Storage:	Solvent:	Expiration Date:	Description:
Z-G34 -122455-05	484785	-18°C +/- 4°C	P/T Methanol	12-Jul-2027	Method 8260 Internal Standard Mix, 3-30, 2,500 mg/L, 1 ml

Certified Values:

The certified value is based on gravimetric and volumetric preparation of this CRM. This CRM has been confirmed by gas chromatography (GC) or gas chromatograph/mass spectrometry (GC/MS) using an internally developed method against an independent source. The uncertainty value is calculated for a 95% confidence interval with a *k* value of 2.

Compound	CAS No.	Purity (%)	Neat Material Lot No.	Concentration, mg/L
chlorobenzene-d5	3114-55-4	99.5	128.120.1P	2504 ± 130
1,2-dichlorobenzene-d_4	2199-69-1	99.7	247.29.3P	2514 ± 130
1,4-difluorobenzene	540-36-3	99.3	129.158.1.2P	2523 ± 140

*Not a certified value

Intended Uses:

This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may aslo be used for various USEPA, NIOSH, and ASTM methods.This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various EN, ISO, EPA, and ASTM methods.

Recommended storage container for ampuled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix (degrees K)
y = boiling point of the solvent (degrees K)

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened ampule should be stored.

SVI-38-13-12

Certificate of Analysis

Catalog No.: Z-G34-122455-05 **Lot No.:** 484785 **Expiration Date:** 7/12/2027

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty (95% confidence) values listed are determined gravimetricly.

Packaging and Storage:

The solution should be stored according to the following storage requirements:
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a seal ampule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology(NIST). Balances are checked daily in accordance to in house procedure O2-LB-G-002. Balances are calibrated annually by an ISO/IEC 17025:2017 and ISO 17034:2016 accredited metrology service.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025:2017 and ISO 17034:2016.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $u=ku_c$: u=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 12-Jul-2027

Accreditation:

This CRM was manufactured by an ISO 17025:2017 chemical testing lab (Certificate number 3031.01) and ISO 17034:2016 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA).

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Components: 1
Storage Condition: Freeze (<-10 °C)

Certified Reference Material

ANAB ACCREDITED AR-1463

Component	CAS #	Purity[3] %	Prepared Concentration[2] (µg/mL)	Certified Analyte Concentration[1] (µg/mL)
2-Chloroethylvinyl ether	110-75-8	100.0	2005	2005

SV1-38-11-19

Reference Standard

This Certified Reference Material was verified in accordance with ISO/IEC 17025 (AT-1339) and ISO 17034 (AR-1463)

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

[1] Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

[2] All weights are traceable through NIST, Test No. 684/291344-18 & 684/292805-19

[3] Purity/Identity determined by one or more of the following methods: GC/MS, LC/MS, NMR, FTIR, Melting Point.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

AccuStandard is accredited to ISO 17034, ISO/IEC 17025 and certified to ISO 9001:2015

SVI-38-11-19

1. **Quality Standards:**

   ISO 17034:2016 – General Requirements for the Competence of Reference Material Producers

   ISO/IEC 17025:2017 – General Requirements for the Competence of Testing And Calibration Laboratories

   ISO 9001:2015 – Quality Management System – Requirements Eagle Registrations

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards. Good Laboratory Practices have been used throughout the preparation of this Standard.

4. **Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.

5. **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label

6. **Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(\mathrm{V}))^2 + (u(\mathrm{m}))^2 + (u(\mathrm{IV}))^2 + (u(\mathrm{RO}))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of k=2 is chosen using approximately a 95% confidence level.

7. **Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

Product Information Sheet

Product Name: 1-Chlorohexane Standard

Product Number: EPA-1208-1

Storage Conditions: Store at Room Temperature (15° to 30°C).

Lot Number: 0006735507

Lot Issue Date: 20-Mar-2023

Expiration Date: 30-Apr-2026

Chemical Name	Concentration	Uncertainty	CAS #	Analysis ID
1-chlorohexane	1000	± 5 µg/mL	000544-10-5	RM04313

Matrix: methanol (methyl alcohol)

Description:
This document is prepared in accordance with ISO 17034 and Guide 31. This analytical reference material (RM) standard was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed above. Purity values are taken from approved vendor raw material certificates.

Traceability:
The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:
This analytical reference (RM) standard was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Instructions for Use:
Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Safety:
Refer to the Safety Data Sheet on www.agilent.com for information regarding this analytical reference material.

Intended Use:
This analytical reference (RM) standard is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

Expiration of Certification:
The certification of this analytical reference standard (RM) is valid until the expiration date specified above, provided the material is handled and stored in accordance with the instructions given in this certificate. This certification is nullified if the material is damaged, contaminated, or otherwise modified.

Certified Values:

The certified value is based on gravimetric and volumetric preparation of this CRM. This CRM has been confirmed by gas chromatography (GC), gas chromatography/mass spectrometry (GC/MS), or High Pressure Liquid Chromatography (HPLC) using an internally developed method against an independent source. The uncertainty value is calculated for a 95% confidence interval with a *k* value of 2.

Compound	CAS No.	Purity (%)	Neat Material Lot No.	Concentration, mg/L

trichlorofluoromethane	75-69-4	99	144.1.3P	1995 ± 38
vinyl chloride	75-01-4	99	143.158.5.3P	1962 ± 45

Second Source standards are prepared according to NELAC requirements.

Intended Use:

This certified reference material (CRM) is intended for use as a calibration standard or a quality control standard for chromatography instrumentation such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various USEPA, NIOSH, and ASTM methods.

Recommended storage container for ampouled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix
y = boiling point of the solvent

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened

Certificate of Analysis

Catalog No.: 3200-G34-120016 **Lot No.:** 513798 **Expiration Date:** 12/12/2028

ampoule should be stored.

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty (95% confidence) values listed are determined gravimetricllly.

Packaging and Storage:

The solution should be stored according to the following storage requirements: **≤ -10 °C**
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a sealed ampoule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

This standard was prepared gravimetrically using balances that are calibrated to the requirements of ISO/IEC 17025. All balances are calibrated externally by an accredited ISO/IEC 17025 calibration laboratory using weight sets traceable to the International System of Units (SI) through the national reference standards maintained by NIST.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025 and ISO 17034.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $U=ku_c$; U=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 12-Dec-2028

Certified Values:

The certified value is based on gravimetric and volumetric preparation of this CRM. This CRM has been confirmed by gas chromatography (GC) or gas chromatograph/mass spectrometry (GC/MS) using an internally developed method against an independent source. The uncertainty value is calculated for a 95% confidence interval with a *k* value of 2.

Compound	CAS No.	Purity (%)	Neat Material Lot No.	Concentration, mg/L

Intended Uses:

This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may aslo be used for various USEPA, NIOSH, and ASTM methods.This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various EN, ISO, EPA, and ASTM methods.

Recommended storage container for ampuled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix (degrees K)

y = boiling point of the solvent (degrees K)

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened ampule should be stored.

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty (95% confidence) values listed are determined gravimetricly.

Packaging and Storage:

The solution should be stored according to the following storage requirements:
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a seal ampule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology(NIST). Balances are checked daily in accordance to in house procedure O2-LB-G-002. Balances are calibrated annually by an ISO/IEC 17025:2017 and ISO 17034:2016 accredited metrology service.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025:2017 and ISO 17034:2016.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $u=ku_c$: u=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 13-Sep-2024

Accreditation:

This CRM was manufactured by an ISO 17025:2017 chemical testing lab (Certificate number 3031.01) and ISO 17034:2016 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA).

1,2,3-trimethylbenzene	526-73-8	92.7	869.8.4.1P	2536 ± 140

*Not a certified value

Intended Uses:

This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may aslo be used for various USEPA, NIOSH, and ASTM methods.This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various EN, ISO, EPA, and ASTM methods.

Recommended storage container for ampuled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix (degrees K)
y = boiling point of the solvent (degrees K)

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened ampule should be stored.

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty

SVr38-09-05

Certificate of Analysis

Catalog No.: Z-G34-020869-08 **Lot No.:** 484154 **Expiration Date:** 6/23/2027

(95% confidence) values listed are determined gravimetricly.

Packaging and Storage:

The solution should be stored according to the following storage requirements:
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a seal ampule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology(NIST). Balances are checked daily in accordance to in house procedure O2-LB-G-002. Balances are calibrated annually by an ISO/IEC 17025:2017 and ISO 17034:2016 accredited metrology service.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025:2017 and ISO 17034:2016.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $u=ku_c$: u=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 23-Jun-2027

Accreditation:

This CRM was manufactured by an ISO 17025:2017 chemical testing lab (Certificate number 3031.01) and ISO 17034:2016 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA).

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Matrix: methanol (methyl alcohol)

Description:
This document is prepared in accordance with ISO 17034 and Guide 31. This analytical reference material standard was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed above.

Traceability:
The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:
This analytical reference standard was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Instructions for Use:
Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Safety:
Refer to the Safety Data Sheet on www.agilent.com for information regarding this analytical reference material.

Intended Use:
This analytical reference standard is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

SVI-38-12-19

Isopropyl ether	108-20-3	100.0	2010	2010
TAME	994-05-8	99.0	2000	1980
t-Butanol	75-65-0	99.6	10005	9965

This Certified Reference Material was verified in accordance with ISO/IEC 17025

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

[2] All weights are traceable through NIST, Test No. 684/289871-17

[1] Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

1. **Quality Standards:**

   ISO 17034:2016 – General Requirements for the Competence of Reference Material Producers

   ISO/IEC 17025:2017 – General Requirements for the Competence of Testing And Calibration Laboratories

   ISO 9001:2015 – Quality Management System – Requirements
   Eagle Registrations

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards. Good Laboratory Practices have been used throughout the preparation of this Standard.

4. **Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.

5. **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label

6. **Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(V))^2 + (u(m))^2 + (u(IV))^2 + (u(RO))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of $k=2$ is chosen using approximately a 95% confidence level.

7. **Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

[2] All weights are traceable through NIST, Test No. 684/291344-18 & 684/292805-19

[3] Purity/Identity determined by one or more of the following methods: GC/MS, LC/MS, NMR, FTIR, Melting Point.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

AccuStandard is accredited to ISO 17034, ISO/IEC 17025 and certified to ISO 9001:2015

QR-ORG/ND-001
Rev. 7/20

1. **Quality Standards:**

   ISO 17034:2016 – General Requirements for the Competence of Reference Material Producers

   ISO/IEC 17025:2017 – General Requirements for the Competence of Testing And Calibration Laboratories

   ~~ISO 9001:2015 – Quality Management System -- Requirements~~ Eagle Registrations

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards. Good Laboratory Practices have been used throughout the preparation of this Standard.

4. **Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.

5. **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label

6. **Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(V))^2 + (u(m))^2 + (u(IV))^2 + (u(RO))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of $k=2$ is chosen using approximately a 95% confidence level.

7. **Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

Agilent

Certificate of Analysis

Product Name: Carbon Disulfide Standard

Product Number: EPA-1012-1 **Lot Issue Date:** 21-Sep-2020

Lot Number: 0006557585 **Expiration Date:** 30-Sep-2024

Description:
This analytical reference material (RM) was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed below.

Analyte	CAS#	Analyte Lot	Concentration ± Uncertainty
carbon disulfide	000075-15-0	RM08158	5023 ± 25 µg/mL

Matrix: methanol (methyl alcohol)

Storage Conditions: Store Frozen (-25° to -10°C).

Traceability:
The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:
This RM was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Intended Use:
This RM is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

Instructions for Use:
Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Hazards:
Refer to the Safety Data Sheet on www.agilent.com for information regarding this RM.

Expiration of Certification:
The certification of this RM is valid until the expiration date specified above, provided the RM is handled and stored in accordance with the instructions given in this certificate. This certification is nullified if the RM is damaged, contaminated, or otherwise modified.

Maintenance of Certification:
If substantive changes are noted that affect the certification before the expiration of this certificate, Agilent will notify the purchaser.

Catalog Number: S-3893 **Lot No.** ND210224010

Description: Methyl acetate

Matrix: Methanol (Purge & Trap Grade)

Ship Date: January 5, 2023
Expiration Date: January 4, 2026

This **SPEXOrganics®** Certified Reference Material, CRM, is intended primarily for use as a calibration standard or quality control standard for organic chromatography instrumentation such as GC, GC-MS, LC, and LC-MS. It can be employed in USEPA, ASTM and other methods relevant to the certified properties listed below.

Certified Compounds:

Compound	CAS #	Labeled	Purity	Certified†	Uncertainty
Methyl acetate	79-20-9	1000 µg/mL	99.5%	1015 µg/mL	± 36 µg/mL

SVI-38-10-08

* - Isomer ratios (when applicable) are an uncertified parameter.

Final Solution Verification:

Final solution integrity verified by Gas Chromatography/Mass Spectrometry. The mass spectrum of each compound was confirmed against the NIST mass spectral database.

† Certified concentration based on gravimetric weights and corrected for the purity of the compound(s) used to prepare the standard. Analytical balance calibration is verified daily and traceable to NIST and NJ Division of Weights and Measures.

This CRM is guaranteed stable and accurate to within the uncertainty listed for the certified value. This includes uncertainty components due to preparation, homogeneity, short term and long term stability. During the stated period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution. For further information, contact the Sales Support Department at crmsales@spexcsp.com.

Report of Certification

SVI-38-10-08

Catalog Number: S-3893 **Lot No.** ND210224010

Description: Methyl acetate

Matrix: Methanol (Purge & Trap Grade)

Ship Date: January 5, 2023

Expiration Date: January 4, 2026

This Certified Reference Material (CRM) has been prepared and certified under an ISO 9001 (certified by DQS), ISO/IEC 17025 (accredited by A2LA) and ISO 17034 (accredited by A2LA) quality system consistent with the following standards:

- ISO 9001: Quality management systems - Requirements
- ISO/IEC 17025: General requirements for the competence of testing and calibration laboratories
- ISO 17034: General requirements for the competence of reference material producers
- ISO Guide 31: Reference Materials - Contents of certificates, labels, and accompanying documentation
- ISO Guide 30: Reference Materials - Selected terms and definitions
- ISO Guide 35: Reference Materials - General and Statistical principles for certification
- Guide to the Expression of Uncertainty in Measurement
- EURACHEM/CITAC Guide: Qualifying Uncertainty in Analytical Measurement
- NIST Technical Note 1297

Storage Requirements:

To ensure the stability of the product once it arrives in your laboratory, please store this product in ambient conditions (18°C to 27°C). Note: Shipping conditions may differ from storage conditions. The EXPIRATION DATE is calculated from the SHIPPED DATE using our stability data and is applicable only if the product is stored under the laboratory specified conditions.

Instructions for Use:

Let material come to room temperature before use. Check for precipitate and if necessary sonicate for one minute. If compounds do not dissolve after one minute then sonicate further until the product is dissolved. A clear appearance is acceptable. The minimum recommended amount that should be removed from this vial is 5µL with a 25µL gas tight syringe. All solutions should be thoroughly mixed, by shaking, prior to use. All surfaces that come in contact with the solution must be thoroughly cleaned prior to use. Dilutions should be performed only with Class A volumetric glassware.

Material Source:

All analytes and matrix materials are obtained and verified by SPEX CertiPrep from pre-qualified vendors as per ISO guidelines. Vendor identifications are proprietary, however sources of all materials used in the preparation and testing of SPEX CertiPrep CRMs are tracked and documented. For assistance, please contact sales support at crmsales@spexcsp.com.

Method of Preparation:

Clean laboratory procedures and techniques have been used throughout the preparation. All materials, equipment, and analytical instrumentation have been qualified prior to use. The highest purity solvents and Class A / calibrated volumetrics have been used in all preparations.

Homogeneity:

The homogeneity of this CRM has been confirmed by procedures consistent with ISO 17025, ISO 17034, and ASTM D6362-98 Appendix X2. Random, replicate samples of the final, packaged material have been analyzed to prove homogeneity in accordance with our internal procedure. This is consistent with the intended use of this CRM. The Degree of Homogeneity, as expressed as maximum between-bottle variation, is 1.2%

Statistical Estimator and Confidence Limits:

The Certified value 'X' as listed on the reverse of this document is at the 95% level of confidence and can be expressed as:

- $X = x \pm U$ where X=certified value, U=expanded uncertainty, x=property value
- $U = ku_c$ where k=2 is the coverage factor at the 95% confidence level
- u_c = combined standard uncertainty obtained by combining the individual compound standard uncertainty components u_i where $u_c=\sqrt{\sum u_i^2}$

Legal Notice:

SPEX CertiPrep Certified Reference Materials are not for any cosmetic, drug, or household application and are to be used only by qualified individuals who are trained in appropriate procedures. No claims against SPEX CertiPrep of any kind whatsoever, whether based on breech of warranty, alleged negligence, or otherwise, with respect to this Reference Material shall be greater than the purchase price. In no event shall SPEX CertiPrep be liable for any loss of profits or any incidental, special, or consequential damages.

Certificate of Reference Material

Catalog Number: S-2470 **Lot No.** NSI231116202
Description: Methylcyclohexane
Matrix: P&T Methanol
Manufactured Date: 11/16/2023
Expiration Date: 11/30/2026

This **SPEXOrganics®** Certified Reference Material, CRM, was manufactured by NSI Lab Solutions (www.nsilabsolutions.com) and is intended primarily for use as a calibration standard or quality control standard for organic chromatography instrumentation such as GC, GC-MS, LC, and LC-MS. It can be employed in USEPA, ASTM and other methods relevant to the certified properties listed below.

Certified Compounds:

Compound	CAS #	Labeled (ug/mL)	Purity	Certified† (ug/mL)		Uncertainty (ug/mL)
Methylcyclohexane	108-87-2	1000	98.0%	1000	±	7.05

SV1-38-14-11

* - Isomer ratios (when applicable) are an uncertified parameter.

Final Solution Verification:

Final solution integrity verified Volumetrically and Analytically. The mass spectrum of each compound was confirmed against the NIST mass spectral database.

† Certified concentration is based on gravimetric or volumetric measurements. All balances are checked daily by an in-house standard operating procedure. The weights used for this daily verification are calibrated annually by an ISO/IEC 17025 accredited calibration laboratory and are certified traceable to NIST. Certificate of Calibration and Traceability available upon request. All glassware used in the manufacturing of this standard is Class A. Volumetric pipettors are calibrated every four months by an ISO/IEC 17025 accredited calibration laboratory.

This CRM is guaranteed stable and accurate to within the uncertainty listed for the certified value. This includes uncertainty components due to preparation, homogeneity, short term and long term stability. During the stated period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution. CERTIFICATE OF ANALYSIS SVI-38-14-03

Catalog No: TK-102-09S-12.5X
Description: Methylcyclohexane
Lot: 222031009
Solvent: Methanol
Hazards: *Refer to SDS for complete safety information*

Signal Word: Danger

Date Certified: Mar 8, 2022
Expiration: Mar 8, 2032
Sample Size: 1 mL
Components: 1
Storage Condition: Ambient (>5 °C)

Certified Reference Material

ANAB ACCREDITED AR-1463

Component	CAS #	Purity % (GC/FID)	Prepared Concentration[2] (µg/mL)	Certified Analyte Concentration[1] (µg/mL)
Methylcyclohexane	108-87-2	100.0	2507	2507

This Certified Reference Material was verified in accordance with ISO/IEC 17025

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

[2] All weights are traceable through NIST, Test No: 684/289871-17

[1] Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

AccuStandard is accredited to ISO 17034, ISO/IEC 17025 and certified to ISO 9001:2015

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards. Good Laboratory Practices have been used throughout the preparation of this Standard.

4. **Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.

5. **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label

6. **Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(V))^2 + (u(m))^2 + (u(IV))^2 + (u(RO))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of $k=2$ is chosen using approximately a 95% confidence level.

7. **Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

CERTIFICATE OF ANALYSIS

SM-38-14-01

Catalog No: S-6524-0.25X
Description: Methyl acetate
Lot: 223081092
Solvent: Methanol
Hazards: *Refer to SDS for complete safety information*

Signal Word: Danger

Date Certified: Aug 7, 2023
Expiration: Aug 7, 2033
Sample Size: 1 mL
Components: 1
Storage Condition: Ambient (>5 °C)

Certified Reference Material

ANAB ACCREDITED AR-1463

Component	CAS #	Purity[3] %	Prepared Concentration[2] (µg/mL)	Certified Analyte Concentration[1] (µg/mL)
Methyl acetate	79-20-9	100.0	2506	2506

This Certified Reference Material was verified in accordance with ISO/IEC 17025 (AT-1339) and ISO 17034 (AR-1463)

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

[1] Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

[2] All weights are traceable through NIST, Test No. 684/291344-18 & 684/292805-19

[3] Purity/identity determined by one or more of the following methods: GC/MS, LC/MS, NMR, FTIR, Melting Point.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

1. **Quality Standards:**

   ISO 17034:2016 – General Requirements for the Competence of Reference Material Producers

   ISO/IEC 17025:2017 – General Requirements for the Competence of Testing And Calibration Laboratories

   ISO 9001:2015 – Quality Management System – Requirements
   Eagle Registrations

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. Catalog No.:	Lot No.:	Storage:	Solvent:	Expiration Date:	Description:
Z-G34 -020354-09	489953	≤ -10 °C	P/T Methanol	3-Oct-2027	2-Butanol Solution, 50000 mg/L, 1 ml

Certified Values:

The certified value is based on gravimetric and volumetric preparation of this CRM. This CRM has been confirmed by gas chromatography (GC) or gas chromatograph/mass spectrometry (GC/MS) using an internally developed method against an independent source. The uncertainty value is calculated for a 95% confidence interval with a *k* value of 2.

Compound	CAS No.	Purity (%)	Neat Material Lot No.	Concentration, mg/L
2-butanol	78-92-2	99.8	354.7.1P	50000 ± 2600

SV1-38-11-07

*Not a certified value

Intended Uses:

This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may aslo be used for various USEPA, NIOSH, and ASTM methods.This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various EN, ISO, EPA, and ASTM methods.

Recommended storage container for ampuled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix (degrees K)
y = boiling point of the solvent (degrees K)

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened ampule should be stored.

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty

SVF3811-07

Certificate of Analysis

Catalog No.: Z-G34-020354-09 **Lot No.:** 489953 **Expiration Date:** 10/3/2027

(95% confidence) values listed are determined gravimetricly.

Packaging and Storage:

The solution should be stored according to the following storage requirements:
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a seal ampule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology(NIST). Balances are checked daily in accordance to in house procedure O2-LB-G-002. Balances are calibrated annually by an ISO/IEC 17025:2017 and ISO 17034:2016 accredited metrology service.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025:2017 and ISO 17034:2016.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $u=ku_c$: u=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 3-Oct-2027

Accreditation:

This CRM was manufactured by an ISO 17025:2017 chemical testing lab (Certificate number 3031.01) and ISO 17034:2016 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA).

Subject: Re: Titan 1-A GW samples SDG 24F004 Discrepancies

Hi Dilukshi,

See answers to your questions below:

1. Please use label as the correct name for samples. I mistakenly did not add the zero to COC.
2. Please do not analyze sample #11. The sample was mistakenly taken. Sample should be discarded.
3. Please do not analyze sample #12. The sample was mistakenly taken. Sample should be discarded.

Thanks,

Arnold Pimentel

Subject: [EXTERNAL] RE: Titan 1-A GW samples SDG 24F004 Discrepancies

Hello Mark,

The following discrepancies were noted for SDG 24F004.

Sample ID mismatch for sample #1 - #7, #9, #10.
COC: T1AMF-MW...
Label: T1AMF-MW0
Sample ID mismatch for sample #8.
COC: T1AMF-EW01-MAY24
Label: T1AMF-EW001-MAY24
Sample #11 was received but is not listed in COC. Please confirm that VOCs SW8260 analysis is required for sample #11.
Sample ID: AB-1-MAY24

Collection date: 5/28/24
Collection time: 1420

Sample #12 was received but is not listed in COC. Please confirm that VOCs SW8260 analysis is required for sample #12.

Sample ID: EB-1-MAY24
Collection date: 5/28/24
Collection time: 1425

I have attached the COCs and SRFs for your reference.

Thank you!

Dilukshi Fernando

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than LOQ/RL but greater than LOD/MDL/DL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range or estimated value.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
MDL	Method Detection Limit
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

SUMMARY PACKAGE
VOLATILE ORGANICS

CASE NARRATIVE

Client : PARSONS

Project: TITAN 1-A

SDG : 24F004

METHOD SW5030C/8260C
VOLATILE ORGANICS BY GC/MS

A total of ten(10) water samples were received on 06/01/24 to be analyzed for Volatile Organics by GC/MS in accordance with Method SW5030C/8260C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. There were six(6)CCVs (Data File IDs: RFG033, RFG058, RFG062, RFG088, RFG092 and RFG119) associated with this SDG. All calibration requirements were satisfied. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, three(3) method blanks were analyzed. VOE2F02B, VOE2F03B and VOE2F04B were compliant to project requirement. Refer to sample result summary forms for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, three(3) sets of LCS/LCD were analyzed. VOE2F02L/VOE2F02C, VOE2F03L/VOE2F03C and VOE2F04L/VOE2F04C were within LCS limits. Refer to LCS summary forms for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Surrogate
Surrogates were added on QC and field samples. For this SDG, all surrogate recoveries were within QC limits except for 1,2-Dichloroethane-D4 in F004-04. Sample result was reported because the surrogate recovery was biased high and no associated target analytes were detected in sample. It was also noted that Dibromofluoromethane surrogate, an alternate surrogate for 1,2-Dichloroethane-D4, was in control. Hence, result was reported. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met with the exception of those that were discussed within the associated QC parameter.

SECOND SOURCE VERIFICATION

FORM 5

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK

BROMOFLUORODENZENE (BFB)

Lab Name : EMAX Laboratories, Inc. Project : ICAL

Lab Code : EMAX SDG No : ICAL

Lab File ID: REG130 BFB Injection Date: 05/18/24

Instrument ID: E2 BFB Injection Time: 09:16

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15 - 40% of mass 95	19.254
75	30 - 60% of mass 95	50.320
95	Base Peak, 100% relative abundance	100.000
96	5 - 9% of mass 95	6.311
173	Less than 2% of mass 174	0.512(.61)1
174	Greater than 50% of mass 95	84.221
175	5 - 9% of mass 174	6.661(7.91)1
176	95 - 101% % of mass 174	81.783(97.11)1
177	5 - 9% % of mass 176	6.306(7.71)2

1-Value is % mass 174 2-Value is % mass 176

This check applies to the following Calibration Standards:

BROMOFLUOROBENZENE (BFB)

Lab Name : EMAX Laboratories, Inc. Project : TITAN 1-A
Lab Code : EMAX SDG No : 24F004
Lab File ID: RFG061 BFB Injection Date: 06/10/24
Instrument ID: E2 BFB Injection Time: 15:55

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15 - 40% of mass 95	20.420
75	30 - 60% of mass 95	52.039
95	Base Peak, 100% relative abundance	100.000
96	5 - 9% of mass 95	7.244
173	Less than 2% of mass 174	1.243(1.64)1
174	Greater than 50% of mass 95	75.606
175	5 - 9% of mass 174	5.475(7.24)1
176	95 - 101% % of mass 174	73.387(97.07)1
177	5 - 9% % of mass 176	4.772(6.5)2

1-Value is % mass 174 2-Value is % mass 176

This check applies to the following samples, Lab QCs and Standards:

	EPA SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED	TIME ANALYZED

RAW DATA
VOLATILE ORGANICS

LABORATORY REPORT FOR

PARSONS

TITAN 1-A

METHOD SW5030C/8260C
VOLATILE ORGANICS BY GC/MS

SDG#: 24F004

CASE NARRATIVE

Client : PARSONS

Project: TITAN 1-A

SDG : 24F004

METHOD SW5030C/8260C
VOLATILE ORGANICS BY GC/MS

A total of ten(10) water samples were received on 06/01/24 to be analyzed for Volatile Organics by GC/MS in accordance with Method SW5030C/8260C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. There were six(6)CCVs (Data File IDs: RFG033, RFG058, RFG062, RFG088, RFG092 and RFG119) associated with this SDG. All calibration requirements were satisfied. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, three(3) method blanks were analyzed. VOE2F02B, VOE2F03B and VOE2F04B were compliant to project requirement. Refer to sample result summary forms for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, three(3) sets of LCS/LCD were analyzed. VOE2F02L/VOE2F02C, VOE2F03L/VOE2F03C and VOE2F04L/VOE2F04C were within LCS limits. Refer to LCS summary forms for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Surrogate
Surrogates were added on QC and field samples. For this SDG, all surrogate recoveries were within QC limits except for 1,2-Dichloroethane-D4 in F004-04. Sample result was reported because the surrogate recovery was biased high and no associated target analytes were detected in sample. It was also noted that Dibromofluoromethane surrogate, an alternate surrogate for 1,2-Dichloroethane-D4, was in control. Hence, result was reported. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met with the exception of those that were discussed within the associated QC parameter.

Compound List Report E2

Method Path : C:\MSDCHEM\1\METHODS\
Method File : VOE2E17.M
Title : METHOD 8260B 10mL
Last Update : Tue May 21 20:44:17 2024
Response Via : Initial Calibration

Total Cpnds : 98

SECOND SOURCE VERIFICATION

FORM 5

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK

BROMOFLUOROBENZENE (BFB)

Lab Name : EMAX Laboratories, Inc. Project : ICAL

Lab Code : EMAX SDG No : ICAL

Lab File ID: REG130 BFB Injection Date: 05/18/24

Instrument ID: E2 BFB Injection Time: 09:16

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15 - 40% of mass 95	19.254
75	30 - 60% of mass 95	50.320
95	Base Peak, 100% relative abundance	100.000
96	5 - 9% of mass 95	6.311
173	Less than 2% of mass 174	0.512(.61)1
174	Greater than 50% of mass 95	84.221
175	5 - 9% of mass 174	6.661(7.91)1
176	95 - 101% % of mass 174	81.783(97.11)1
177	5 - 9% % of mass 176	6.306(7.71)2

1-Value is % mass 174 2-Value is % mass 176

This check applies to the following Calibration Standards:

	EPA SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED	TIME ANALYZED
1	VSTD10	IVOE2E1702	REG131	05/18/24	09:57

CERTIFIED REFERENCE MATERIAL

SM-38-10-B

Certificate of Analysis

chromatographic plus

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 30240 **Lot No.:** A0192204

Description : 8260A Surrogate Mix

8260A Surrogate Mix 2,500µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : December 31, 2027 **Storage:** 0°C or colder

Ship: Ambient

CERTIFIED VALUES

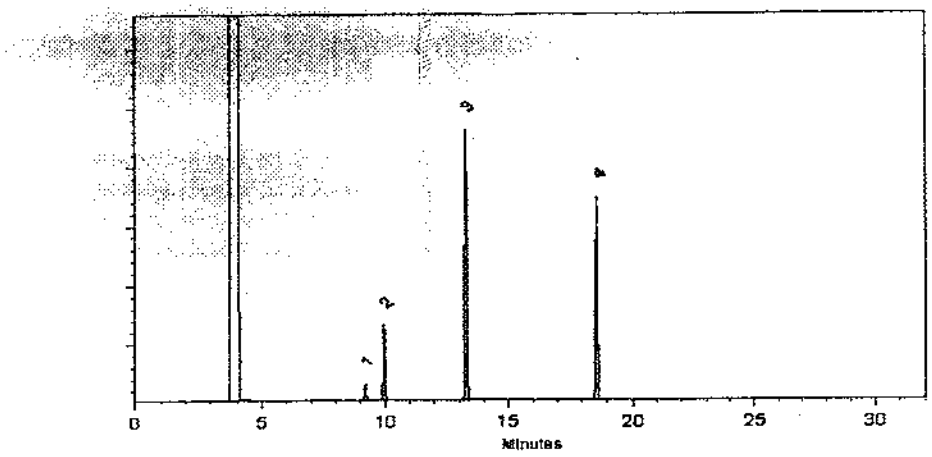
Quality Confirmation Test

Column:
105m x 0.53mm x 3.0µm
Rtx-502.2 (cat.#10910)

Carrier Gas:
hydrogen-constant pressure 11.0 psi.

Temp. Program:
40°C (hold 2 min.) to 240°C
@ 8°C/min. (hold 5 min.)



Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
FID

Split Vent:
40 ml/min

Inj. Vol
1µl

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Daniel Wasson - Operations Tech I

Date Mixed: 02-Dec-2022 **Balance Serial #** 1128342314

Christie Mills - Operations Tech II - ARM QC

Date Passed: 06-Dec-2022

Manufactured under Restek's ISO 9001:2015 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Certificate of Analysis

Date Received: 10/6/23

Catalog No.:	Lot No.:	Storage:	Solvent:	Expiration Date:	Description:
Z-G34 -122455-05	484785	-18°C +/- 4°C	P/T Methanol	12-Jul-2027	Method 8260 Internal Standard Mix, 3-30, 2,500 mg/L, 1 ml

Certified Values:

The certified value is based on gravimetric and volumetric preparation of this CRM. This CRM has been confirmed by gas chromatography (GC) or gas chromatograph/mass spectrometry (GC/MS) using an internally developed method against an independent source. The uncertainty value is calculated for a 95% confidence interval with a *k* value of 2.

Compound	CAS No.	Purity (%)	Neat Material Lot No.	Concentration, mg/L
chlorobenzene-d5	3114-55-4	99.5	128.120.1P	2504 ± 130
1,2-dichlorobenzene-d_4	2199-69-1	99.7	247.29.3P	2514 ± 130
1,4-difluorobenzene	540-36-3	99.3	129.158.1.2P	2523 ± 140

*Not a certified value

Intended Uses:

This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may aslo be used for various USEPA, NIOSH, and ASTM methods.This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various EN, ISO, EPA, and ASTM methods.

Recommended storage container for ampuled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix (degrees K)
y = boiling point of the solvent (degrees K)

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened ampule should be stored.

SVI-38-13-12

Certificate of Analysis

Catalog No.: Z-G34-122455-05 **Lot No.:** 484785 **Expiration Date:** 7/12/2027

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty (95% confidence) values listed are determined gravimetricly.

Packaging and Storage:

The solution should be stored according to the following storage requirements:
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a seal ampule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology(NIST). Balances are checked daily in accordance to in house procedure O2-LB-G-002. Balances are calibrated annually by an ISO/IEC 17025:2017 and ISO 17034:2016 accredited metrology service.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025:2017 and ISO 17034:2016.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $u=ku_c$: u=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 12-Jul-2027

Accreditation:

This CRM was manufactured by an ISO 17025:2017 chemical testing lab (Certificate number 3031.01) and ISO 17034:2016 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA).

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified expanded uncertainty value includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ uncertainty} = k\sqrt{u^2_{gravimetric} + u^2_{homogeneity} + u^2_{storage\ stability} + u^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampuls are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampuls. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

SVI-38-11-19

Reference Standard

This Certified Reference Material was verified in accordance with ISO/IEC 17025 (AT-1339) and ISO 17034 (AR-1463)

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

[1] Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

[2] All weights are traceable through NIST, Test No. 684/291344-18 & 684/292805-19

[3] Purity/Identity determined by one or more of the following methods: GC/MS, LC/MS, NMR, FTIR, Melting Point.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

AccuStandard is accredited to ISO 17034, ISO/IEC 17025 and certified to ISO 9001:2015

SVI-38-11-19

1. **Quality Standards:**

   ISO 17034:2016 – General Requirements for the Competence of Reference Material Producers

   ISO/IEC 17025:2017 – General Requirements for the Competence of Testing And Calibration Laboratories

   ISO 9001:2015 – Quality Management System – Requirements Eagle Registrations

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards. Good Laboratory Practices have been used throughout the preparation of this Standard.

4. **Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.

5. **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label

6. **Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(V))^2 + (u(m))^2 + (u(TV))^2 + (u(RO))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of k=2 is chosen using approximately a 95% confidence level.

7. **Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer) -20°C or colder (Deep Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.

Reference Material Certificate

Product Information Sheet

Product Name: 1-Chlorohexane Standard

Product Number: EPA-1208-1

Storage Conditions: Store at Room Temperature (15° to 30°C).

Lot Number: 0006735507

Lot Issue Date: 20-Mar-2023

Expiration Date: 30-Apr-2026

Chemical Name	Concentration	Uncertainty	CAS #	Analysis ID
1-chlorohexane	1000	± 5 µg/mL	000544-10-5	RM04313

Matrix: methanol (methyl alcohol)

Description:
This document is prepared in accordance with ISO 17034 and Guide 31. This analytical reference material (RM) standard was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed above. Purity values are taken from approved vendor raw material certificates.

Traceability:
The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:
This analytical reference (RM) standard was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Instructions for Use:
Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Safety:
Refer to the Safety Data Sheet on www.agilent.com for information regarding this analytical reference material.

Intended Use:
This analytical reference (RM) standard is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

Expiration of Certification:
The certification of this analytical reference standard (RM) is valid until the expiration date specified above, provided the material is handled and stored in accordance with the instructions given in this certificate. This certification is nullified if the material is damaged, contaminated, or otherwise modified.

This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

[2] All weights are traceable through NIST, Test No. 684/291344-18 & 684/292805-19

[3] Purity/Identity determined by one or more of the following methods: GC/MS, LC/MS, NMR, FTIR, Melting Point.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

AccuStandard is accredited to ISO 17034, ISO/IEC 17025 and certified to ISO 9001:2015

Catalog No.:	Lot No.:	Storage:	Solvent:	Expiration Date:	Description:
3200-G34 -120016-03	513798	≤ -10 °C	P/T Methanol	12-Dec-2028	ISO 17034 - Method 8260 Gases, 2,000 mg/L, 2 x 0.6 mL

Certified Values:

The certified value is based on gravimetric and volumetric preparation of this CRM. This CRM has been confirmed by gas chromatography (GC), gas chromatography/mass spectrometry (GC/MS), or High Pressure Liquid Chromatography (HPLC) using an internally developed method against an independent source. The uncertainty value is calculated for a 95% confidence interval with a *k* value of 2.

Compound	CAS No.	Purity (%)	Neat Material Lot No.	Concentration, mg/L
bromomethane	74-83-9	99.9	139.158.2.1P	1962 ± 23
chloroethane	75-00-3	99.94	141.2.3P	1995 ± 23
chloromethane	74-87-3	99.7	140.158.3P	2018 ± 24
dichlorodifluoromethane	75-71-8	99	142.158.5.1P	2026 ± 47
trichlorofluoromethane	75-69-4	99	144.1.3P	1995 ± 38
vinyl chloride	75-01-4	99	143.158.5.3P	1962 ± 45

Second Source standards are prepared according to NELAC requirements.

Intended Use:

This certified reference material (CRM) is intended for use as a calibration standard or a quality control standard for chromatography instrumentation such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various USEPA, NIOSH, and ASTM methods.

Recommended storage container for ampouled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix
y = boiling point of the solvent

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened

Certificate of Analysis

Catalog No.: 3200-G34-120016 **Lot No.:** 513798 **Expiration Date:** 12/12/2028

ampoule should be stored.

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty (95% confidence) values listed are determined gravimetricllly.

Packaging and Storage:

The solution should be stored according to the following storage requirements: **≤ -10 °C**
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a sealed ampoule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

This standard was prepared gravimetrically using balances that are calibrated to the requirements of ISO/IEC 17025. All balances are calibrated externally by an accredited ISO/IEC 17025 calibration laboratory using weight sets traceable to the International System of Units (SI) through the national reference standards maintained by NIST.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025 and ISO 17034.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $U=ku_c$; U=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 12-Dec-2028

Intended Uses:

This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may aslo be used for various USEPA, NIOSH, and ASTM methods.This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various EN, ISO, EPA, and ASTM methods.

Recommended storage container for ampuled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix (degrees K)

y = boiling point of the solvent (degrees K)

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened ampule should be stored.

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty (95% confidence) values listed are determined gravimetricly.

Packaging and Storage:

The solution should be stored according to the following storage requirements:
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a seal ampule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology(NIST). Balances are checked daily in accordance to in house procedure O2-LB-G-002. Balances are calibrated annually by an ISO/IEC 17025:2017 and ISO 17034:2016 accredited metrology service.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025:2017 and ISO 17034:2016.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $u=ku_c$: u=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 13-Sep-2024

Accreditation:

This CRM was manufactured by an ISO 17025:2017 chemical testing lab (Certificate number 3031.01) and ISO 17034:2016 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA).

This CRM has been confirmed by gas chromatography (GC) or gas chromatograph/mass spectrometry (GC/MS) using an internally developed method against an independent source. The uncertainty value is calculated for a 95% confidence interval with a *k* value of 2.

Compound	CAS No.	Purity (%)	Neat Material Lot No.	Concentration, mg/L
2-chloroethylvinyl ether	110-75-8	99.8	145.1.5P	2010 ± 110

*Not a certified value

Intended Uses:

This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may aslo be used for various USEPA, NIOSH, and ASTM methods.This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various EN, ISO, EPA, and ASTM methods.

Recommended storage container for ampuled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix (degrees K)
y = boiling point of the solvent (degrees K)

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened ampule should be stored.

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty (95% confidence) values listed are determined gravimetricly.

SN-39-13-08

Certificate of Analysis

Catalog No.: Z-G34-020145-02 **Lot No.:** 492308 **Expiration Date:** 8/23/2027

Packaging and Storage:

The solution should be stored according to the following storage requirements:
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a seal ampule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology(NIST). Balances are checked daily in accordance to in house procedure O2-LB-G-002. Balances are calibrated annually by an ISO/IEC 17025:2017 and ISO 17034:2016 accredited metrology service.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025:2017 and ISO 17034:2016.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $u=ku_c$: u=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 23-Aug-2027

Accreditation:

This CRM was manufactured by an ISO 17025:2017 chemical testing lab (Certificate number 3031.01) and ISO 17034:2016 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA).

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Matrix: methanol (methyl alcohol)

Description:
This document is prepared in accordance with ISO 17034 and Guide 31. This analytical reference material standard was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed above.

Traceability:
The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:
This analytical reference standard was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Instructions for Use:
Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Safety:
Refer to the Safety Data Sheet on www.agilent.com for information regarding this analytical reference material.

Intended Use:
This analytical reference standard is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

This Certified Reference Material was verified in accordance with ISO/IEC 17025

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

[2] All weights are traceable through NIST, Test No. 684/289871-17

[1] Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

AccuStandard is accredited to ISO 17034, ISO/IEC 17025 and certified to ISO 9001:2015

QR-ORG/IND-001
Rev. 7/20

1. **Quality Standards:**

   ISO 17034:2016 – General Requirements for the Competence of Reference Material Producers

   ISO/IEC 17025:2017 – General Requirements for the Competence of Testing And Calibration Laboratories

   ISO 9001:2015 – Quality Management System – Requirements
   Eagle Registrations

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards. Good Laboratory Practices have been used throughout the preparation of this Standard.

4. **Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.

5. **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label

6. **Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(V))^2 + (u(m))^2 + (u(IV))^2 + (u(RO))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of $k=2$ is chosen using approximately a 95% confidence level.

7. **Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

Agilent

Certificate of Analysis

Product Name: Carbon Disulfide Standard

Product Number: EPA-1012-1 **Lot Issue Date:** 21-Sep-2020

Lot Number: 0006557585 **Expiration Date:** 30-Sep-2024

Description:
This analytical reference material (RM) was manufactured and verified in accordance with an ISO 9001 registered quality system and analyte concentrations were verified by an ISO 17025 accredited laboratory. The concentration and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed below.

Analyte	CAS#	Analyte Lot	Concentration ± Uncertainty
carbon disulfide	000075-15-0	RM08158	5023 ± 25 µg/mL

Matrix: methanol (methyl alcohol)

Storage Conditions: Store Frozen (-25° to -10°C).

Traceability:
The balances used for these measurements are calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z540.3, ISO 9001, ISO 17025, and ISO 17034. Calibrated Class A glassware is used for volumetric measurements. Thermometers are calibrated against a NIST traceable thermometer in accordance with NIST Special Publication 1088.

Homogeneity:
This RM was unitized according to an in-house procedure and is guaranteed to be homogeneous. There is no minimum sub-sample size required.

Intended Use:
This RM is intended for the preparation of working reference samples for use in routine laboratory analyses, calibration of instruments, validation of analytical methods, assessments of measurement methods, and continuing calibration verification.

Instructions for Use:
Sample aliquots for analysis should be withdrawn at 20°C to 25°C immediately after opening the container and should be processed without delay for the certified values to be valid within the stated uncertainties.

Hazards:
Refer to the Safety Data Sheet on www.agilent.com for information regarding this RM.

Expiration of Certification:
The certification of this RM is valid until the expiration date specified above, provided the RM is handled and stored in accordance with the instructions given in this certificate. This certification is nullified if the RM is damaged, contaminated, or otherwise modified.

Maintenance of Certification:
If substantive changes are noted that affect the certification before the expiration of this certificate, Agilent will notify the purchaser.

Catalog Number: S-3893 **Lot No.** ND210224010

Description: Methyl acetate

Matrix: Methanol (Purge & Trap Grade)

Ship Date: January 5, 2023
Expiration Date: January 4, 2026

This **SPEXOrganics®** Certified Reference Material, CRM, is intended primarily for use as a calibration standard or quality control standard for organic chromatography instrumentation such as GC, GC-MS, LC, and LC-MS. It can be employed in USEPA, ASTM and other methods relevant to the certified properties listed below.

Certified Compounds:

Compound	CAS #	Labeled	Purity	Certified†	Uncertainty
Methyl acetate	79-20-9	1000 µg/mL	99.5%	1015 µg/mL	± 36 µg/mL

SVI-38-10-08

* - Isomer ratios (when applicable) are an uncertified parameter.

Final Solution Verification:

Final solution integrity verified by Gas Chromatography/Mass Spectrometry. The mass spectrum of each compound was confirmed against the NIST mass spectral database.

† Certified concentration based on gravimetric weights and corrected for the purity of the compound(s) used to prepare the standard. Analytical balance calibration is verified daily and traceable to NIST and NJ Division of Weights and Measures.

This CRM is guaranteed stable and accurate to within the uncertainty listed for the certified value. This includes uncertainty components due to preparation, homogeneity, short term and long term stability. During the stated period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution. For further information, contact the Sales Support Department at crmsales@spexcsp.com.

Report of Certification

SVI-38-10-08

Catalog Number: S-3893 **Lot No.** ND210224010

Description: Methyl acetate

Matrix: Methanol (Purge & Trap Grade)

Ship Date: January 5, 2023

Expiration Date: January 4, 2026

This Certified Reference Material (CRM) has been prepared and certified under an ISO 9001 (certified by DQS), ISO/IEC 17025 (accredited by A2LA) and ISO 17034 (accredited by A2LA) quality system consistent with the following standards:

- ISO 9001: Quality management systems - Requirements
- ISO/IEC 17025: General requirements for the competence of testing and calibration laboratories
- ISO 17034: General requirements for the competence of reference material producers
- ISO Guide 31: Reference Materials - Contents of certificates, labels, and accompanying documentation
- ISO Guide 30: Reference Materials - Selected terms and definitions
- ISO Guide 35: Reference Materials - General and Statistical principles for certification
- Guide to the Expression of Uncertainty in Measurement
- EURACHEM/CITAC Guide: Qualifying Uncertainty in Analytical Measurement
- NIST Technical Note 1297

Storage Requirements:

To ensure the stability of the product once it arrives in your laboratory, please store this product in ambient conditions (18°C to 27°C). Note: Shipping conditions may differ from storage conditions. The EXPIRATION DATE is calculated from the SHIPPED DATE using our stability data and is applicable only if the product is stored under the laboratory specified conditions.

Instructions for Use:

Let material come to room temperature before use. Check for precipitate and if necessary sonicate for one minute. If compounds do not dissolve after one minute then sonicate further until the product is dissolved. A clear appearance is acceptable. The minimum recommended amount that should be removed from this vial is 5µL with a 25µL gas tight syringe. All solutions should be thoroughly mixed, by shaking, prior to use. All surfaces that come in contact with the solution must be thoroughly cleaned prior to use. Dilutions should be performed only with Class A volumetric glassware.

Material Source:

All analytes and matrix materials are obtained and verified by SPEX CertiPrep from pre-qualified vendors as per ISO guidelines. Vendor identifications are proprietary, however sources of all materials used in the preparation and testing of SPEX CertiPrep CRMs are tracked and documented. For assistance, please contact sales support at crmsales@spexcsp.com.

Method of Preparation:

Clean laboratory procedures and techniques have been used throughout the preparation. All materials, equipment, and analytical instrumentation have been qualified prior to use. The highest purity solvents and Class A / calibrated volumetrics have been used in all preparations.

Homogeneity:

The homogeneity of this CRM has been confirmed by procedures consistent with ISO 17025, ISO 17034, and ASTM D6362-98 Appendix X2. Random, replicate samples of the final, packaged material have been analyzed to prove homogeneity in accordance with our internal procedure. This is consistent with the intended use of this CRM. The Degree of Homogeneity, as expressed as maximum between-bottle variation, is 1.2%

Statistical Estimator and Confidence Limits:

The Certified value 'X' as listed on the reverse of this document is at the 95% level of confidence and can be expressed as:

- $X = x \pm U$ where X=certified value, U=expanded uncertainty, x=property value
- $U = ku_c$ where k=2 is the coverage factor at the 95% confidence level
- u_c = combined standard uncertainty obtained by combining the individual compound standard uncertainty components u_i where $u_c=\sqrt{\sum u_i^2}$

Legal Notice:

SPEX CertiPrep Certified Reference Materials are not for any cosmetic, drug, or household application and are to be used only by qualified individuals who are trained in appropriate procedures. No claims against SPEX CertiPrep of any kind whatsoever, whether based on breech of warranty, alleged negligence, or otherwise, with respect to this Reference Material shall be greater than the purchase price. In no event shall SPEX CertiPrep be liable for any loss of profits or any incidental, special, or consequential damages.

CERTIFICATE OF ANALYSIS

SVI-38-14-03

Catalog No: TK-102-09S-12.5X
Description: Methylcyclohexane
Lot: 222031009
Solvent: Methanol
Hazards: *Refer to SDS for complete safety information*

Signal Word: Danger

Date Certified: Mar 8, 2022
Expiration: Mar 8, 2032
Sample Size: 1 mL
Components: 1
Storage Condition: Ambient (>5 °C)

Certified Reference Material

ANAB ACCREDITED AR-1463

Component	CAS #	Purity % (GC/FID)	Prepared Concentration[2] (µg/mL)	Certified Analyte Concentration[1] (µg/mL)
Methylcyclohexane	108-87-2	100.0	2507	2507

This Certified Reference Material was verified in accordance with ISO/IEC 17025

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

[2] All weights are traceable through NIST, Test No: 684/289871-17

[1] Certified Analyte Concentration = Purity x Prepared Concentration.

The Uncertainty associated with the certified concentration reported on this certificate is ±2.4%. This value is the combined expanded uncertainty and represents an estimated standard deviation equal to the positive square root of the total variation of the uncertainty of components. A normal distribution is assumed and a coverage factor of K=2 is chosen using approximately a 95% confidence level.

Labels and certificates follow U.S. Conventions in reporting numerical values: A comma (,) is used to separate units of one-thousand or greater. A period (.) is used as a decimal place marker.

The information on this certificate may not be reproduced without the express permission of the manufacturer. See reverse side for additional information

Hazard Information: Please refer to the SDS for information regarding the hazards associated with using this material.

This product was prepared according to in-house procedures and is guaranteed to be homogeneous.

Certified By: Larry Decker, Organic QC Manager

For use in routine laboratory analysis.

AccuStandard is accredited to ISO 17034, ISO/IEC 17025 and certified to ISO 9001:2015

QR-ORG/INO-001
Rev. 7/20

1. **Quality Standards:**

   ISO 17034:2016 – General Requirements for the Competence of Reference Material Producers

   ISO/IEC 17025:2017 – General Requirements for the Competence of Testing And Calibration Laboratories

   ISO 9001:2015 – Quality Management System – Requirements
   Eagle Registrations

2. **Intended Use:** The product covered by this certificate is designed for calibration or for use in quality control procedures for the specified chemical compounds listed on the reverse side. This product can be used for quantification and/or identification. This product can also be used as a reference material to validate analytical procedures, subject to the conditions under Section 7.

3. **Manufacturing:** All balances are calibrated daily using an in-house procedure with weights that are compared annually to master weights and traceable to NIST. The balances are also calibrated annually by an ISO/IEC 17025 accredited calibration laboratory. Please refer to the NIST test number listed on the front of this certificate. Class A glassware is used in the manufacture and quality control of all standards. Good Laboratory Practices have been used throughout the preparation of this Standard.

4. **Homogeneity:** This product is sufficiently homogeneous and any sample size would be within the uncertainty budget.

5. **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label

6. **Uncertainty:** The uncertainty values as stated on the face of this certificate have been determined using the EURACHEM/CITAC Guide. We report a combined expanded uncertainty equal to the positive square root of the total variance of the uncertainty of the components using the following formula: $u_a = \sqrt{(u(V))^2 + (u(m))^2 + (u(IV))^2 + (u(RO))^2}$ This formula represents uncertainty components from the mass, volume, short-term stability, long-term stability and homogeneity factors associated with the production of this product. The expanded uncertainty, assumes a normal distribution and a coverage factor of $k=2$ is chosen using approximately a 95% confidence level.

7. **Legal Notice and Limit of Liability:** This product is for routine laboratory analysis and research purposes only. The company's liability will be limited to replacement of product or refund of purchase price. Notice of claims must be made within thirty (30) days from date of delivery.

Catalog No.:	Lot No.:	Storage:	Solvent:	Expiration Date:	Description:
Z-G34 -020354-09	489953	≤ -10 °C	P/T Methanol	3-Oct-2027	2-Butanol Solution, 50000 mg/L, 1 ml

Certified Values:

The certified value is based on gravimetric and volumetric preparation of this CRM. This CRM has been confirmed by gas chromatography (GC) or gas chromatograph/mass spectrometry (GC/MS) using an internally developed method against an independent source. The uncertainty value is calculated for a 95% confidence interval with a *k* value of 2.

Compound	CAS No.	Purity (%)	Neat Material Lot No.	Concentration, mg/L
2-butanol	78-92-2	99.8	354.7.1P	50000 ± 2600

SV1-38-11-07

*Not a certified value

Intended Uses:

This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may aslo be used for various USEPA, NIOSH, and ASTM methods.This Certified Reference material (CRM) is intended for use as a calibration standard or a quality control standard for Chromatography Equipment such as GC, GC/MS, HPLC, and HPLC/MS. It may also be used for various EN, ISO, EPA, and ASTM methods.

Recommended storage container for ampuled products after opening is a 12mmx32mm amber vial with screw cap Teflon lined silicon septum. The modeled % change per day can be calculated using the following:

$$\% \text{ Change} = (-0.018\ln(x+31) + 0.1157) + 636.54y^{-3.202}$$

where x = boiling point of the most volatile analyte in the mix (degrees K)
y = boiling point of the solvent (degrees K)

This model assumes the container is stored at -10 °C and is unopened during storage. The user should determine what the acceptable error for their process is and calculate the maximum number of days the opened ampule should be stored.

Method of Preparation:

All weights are traceable through N. I. S. T. Test No. 822/264157-00. Concentration (correct for purity) and uncertainty

SVF3811-07

Certificate of Analysis

Catalog No.: Z-G34-020354-09 **Lot No.:** 489953 **Expiration Date:** 10/3/2027

(95% confidence) values listed are determined gravimetricly.

Packaging and Storage:

The solution should be stored according to the following storage requirements:
Once the product is opened, it should be transferred to a vial with minimum head space if the product was in a seal ampule. Once opened, the expiration is determined by user specifications.

Glassware Calibration:

Only Class A glassware is used in the manufacture and quality control of Standards. All Glassware is calibrated using NIST traceable weights.

Weights and Balance Calibration:

Weights used perform daily checks on balances calibrated annually by the State of South Carolina Department of Agriculture Metrology Laboratory and are traceable to the National Institute of Standards and Technology(NIST). Balances are checked daily in accordance to in house procedure O2-LB-G-002. Balances are calibrated annually by an ISO/IEC 17025:2017 and ISO 17034:2016 accredited metrology service.

Homogeneity:

Random replicate samples of the final packaged CRM have been analyzed to prove homogeneity in accordance with internal procedure O2-QS-011. This is consistent with the intended use of this CRM. The homogeneity of this product has been confirmed by procedures consistent with ISO/IEC 17025:2017 and ISO 17034:2016.

Hazardous Information:

Refer to MSDS

Calculation of Uncertainty:

The following equations are used to calculate the value of the expanded uncertainty: $u=ku_c$: u=Expanded Uncertainty, k= the coverage factor at the 95% confidence level, k=2, u_c = the combined uncertainty $u_c = \sqrt{\sum u_i^2}$ where u_i are the individual uncertainty components for characterization, transportation, homogeneity, and shelf life.

Expiration Information:

The Stability of this product is based upon rigorous short term and long term testing of the solution for the certified value. These tests include the effect of temperature and packaging on the product. This standard is guaranteed until the following date: 3-Oct-2027

Accreditation:

This CRM was manufactured by an ISO 17025:2017 chemical testing lab (Certificate number 3031.01) and ISO 17034:2016 Reference Material Producer (RMP) Certificate number 3031.02 accredited by The American Association of Laboratory Accreditation (A2LA).

NOTICE: Turnaround time (TAT) for samples that have not begun until 24 hours after we have received. For samples received after 1:30 hrs. TAT shall start at 0800 hrs for next business day. The client is responsible for all cost associated with sample disposal. Samples shall be disposed of as soon as practical, but not prior to fifteen (15) calendar days after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than LOQ/RL but greater than LOD/MDL/DL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range or estimated value.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
MDL	Method Detection Limit
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

SUMMARY PACKAGE
VOLATILE ORGANICS

CASE NARRATIVE

Client : PARSONS

Project: TITAN 1-A

SDG : 24F019

METHOD SW5030C/8260C
VOLATILE ORGANICS BY GC/MS

A total of fourteen(14) water samples were received on 06/05/24 to be analyzed for Volatile Organics by GC/MS in accordance with Method SW5030C/8260C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. There were six(6) CCVs (Data File IDs: RFG092, RFG119, RFG123, RFG149, RFG153 and RFG179) associated with this SDG. All calibration requirements were satisfied. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, three(3) method blanks were analyzed. V0E2F04B, V0E2F05B and V0E2F06B were compliant to project requirement. Refer to sample result summary forms for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, five(3) sets of LCS/LCD were analyzed. Lab control sample was prepared and analyzed at a frequency required by the project. All analytes were within LCS limits except for: V0E2F05L/V0E2F05C - Percent recovery for 1,4-Dichlorobenzene in LCD. The rest of the analytes were in control. V0E2F06L/V0E2F06C - Percent recovery for 1,4-Dichlorobenzene in LCD. The rest of the analytes were in control. Refer to LCS summary forms for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, two(2) sets of MS/MSD were analyzed. 24F019-02M/24F019-02S - all analytes were within MS QC limits. 24F019-03M/24F019-03S - all analytes were within MS QC limits. Refer to Matrix QC summary forms for details.

Surrogate
Surrogates were added on QC and field samples. All surrogate recoveries were within QC limits. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met with the exception of those that were discussed within the associated QC parameter.

96	5 - 9% of mass 95	6.720
173	Less than 2% of mass 174	0.804(.96)1
174	Greater than 50% of mass 95	83.334
175	5 - 9% of mass 174	6.239(7.49)1
176	95 - 101% % of mass 174	81.293(97.55)1
177	5 - 9% % of mass 176	5.264(6.48)2

1-Value is % mass 174 2-Value is % mass 176

This check applies to the following Calibration Standards:

SECOND SOURCE VERIFICATION

FORM 5

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK

BROMOFLUOROBENZENE (BFB)

Lab Name : EMAX Laboratories, Inc. Project : ICAL

Lab Code : EMAX SDG No : ICAL

Lab File ID: REG130 BFB Injection Date: 05/18/24

Instrument ID: E2 BFB Injection Time: 09:16

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15 - 40% of mass 95	19.254
75	30 - 60% of mass 95	50.320
95	Base Peak, 100% relative abundance	100.000
96	5 - 9% of mass 95	6.311
173	Less than 2% of mass 174	0.512(.61)1
174	Greater than 50% of mass 95	84.221
175	5 - 9% of mass 174	6.661(7.91)1
176	95 - 101% % of mass 174	81.783(97.11)1
177	5 - 9% % of mass 176	6.306(7.71)2

1-Value is % mass 174 2-Value is % mass 176

This check applies to the following Calibration Standards:

	EPA SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED	TIME ANALYZED
1	VSTD10	IVOE2E1702	REG131	05/18/24	09:57

RAW DATA
VOLATILE ORGANICS

LABORATORY REPORT FOR

PARSONS

TITAN 1-A

METHOD SW5030C/8260C
VOLATILE ORGANICS BY GC/MS

SDG#: 24F019

CASE NARRATIVE

Client : PARSONS

Project: TITAN 1-A

SDG : 24F019

METHOD SW5030C/8260C
VOLATILE ORGANICS BY GC/MS

A total of fourteen(14) water samples were received on 06/05/24 to be analyzed for Volatile Organics by GC/MS in accordance with Method SW5030C/8260C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. There were six(6) CCVs (Data File IDs: RFG092, RFG119, RFG123, RFG149, RFG153 and RFG179) associated with this SDG. All calibration requirements were satisfied. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, three(3) method blanks were analyzed. V0E2F04B, V0E2F05B and V0E2F06B were compliant to project requirement. Refer to sample result summary forms for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, five(3) sets of LCS/LCD were analyzed. Lab control sample was prepared and analyzed at a frequency required by the project. All analytes were within LCS limits except for: V0E2F05L/V0E2F05C - Percent recovery for 1,4-Dichlorobenzene in LCD. The rest of the analytes were in control. V0E2F06L/V0E2F06C - Percent recovery for 1,4-Dichlorobenzene in LCD. The rest of the analytes were in control. Refer to LCS summary forms for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, two(2) sets of MS/MSD were analyzed. 24F019-02M/24F019-02S - all analytes were within MS QC limits. 24F019-03M/24F019-03S - all analytes were within MS QC limits. Refer to Matrix QC summary forms for details.

Surrogate
Surrogates were added on QC and field samples. All surrogate recoveries were within QC limits. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met with the exception of those that were discussed within the associated QC parameter.
