We use the highest purity raw materials available to minimize impurity levels in the final solution. Typically 99.999%+ pure starting materials are used as well as high purity acids and ASTM Type I 18 megohm deionized water.

All trace level elemental impurities were determined via plasma emission spectroscopy on the concentrate.

All glassware used in preparation is Class A.

All weights are traceable through NIST, Test No. 684/289871-17

All bottles are acid leached and triple rinsed with deionized water prior to use.

Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware. Keep bottle tightly capped.

Certified By: Meigan O'Leary

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: S4400-100011

Aluminum (Al) – 1000 µg/mL

Lot #: 1136191-68

Matrix: 2% HNO_3

Element	Certified Concentration & Uncertainty
Al	1002 ± 2 µg/mL (w/v)
	991.0 ± 2.0 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034, ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.999% pure aluminum nitrate [$Al(NO_3)_3$]. The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3101a, lot #140903**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Ce	<0.2	Gd	<0.2										

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Ce	<0.2	Gd	<0.2										

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: S4400-100074

Boron (B) – 1000 µg/mL

Lot #: 1284162-23

Matrix: H_2O

Element	Certified Concentration & Uncertainty
B	995.0 ± 3.0 µg/mL (w/v)
	997.0 ± 3.0 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.9995% pure boric acid (H_3BO_3) dissolved and diluted with filtered (0.22µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration prvider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3107, lot #190605**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: S4400-10M91

Calcium (Ca) – 10,000 µg/mL

Lot #: 1420618

Matrix: 4% HNO_3

*Expiration Date: 25 February 2026

Element	Certified Concentration & Uncertainty
Ca	10,050 ± 35 µg/mL (w/v)
	9696 ± 34 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034, ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 10,000 µg/mL by gravimetric methods using 99.999% pure calcium carbonate ($CaCO_3$). The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3109a, lot #130213**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Ce	<2	Gd	<2										

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: S4400-10M261 (1)

Iron (Fe) – 10,000 µg/mL

Lot #: 1240670-6

SMA-025-06-01
Rec 9/13/22 NT
Exp 3/6/24

Matrix: 4% HNO_3

Element	Certified Concentration & Uncertainty
Fe	9981 ± 39 µg/mL (w/v)
	9562 ± 38 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034, ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 10,000 µg/mL by gravimetric methods using 99.999% pure iron nitrate nonahydrate [$Fe(NO_3)_3$]. The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3126a, lot #140812**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: S4400-1000343

Molybdenum (Mo) – 1000 µg/mL

Lot #: 1339101-6

Matrix: 2% HNO_3/0.1% HF

Element	Certified Concentration & Uncertainty
Mo	1005 ± 4 µg/mL (w/v)
	986.0 ± 4.0 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034**, **ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.999% pure molybdenum (Mo). The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3134, lot #130418**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

REPORT OF ANALYSIS

Single-Element Aqueous CRM

Product #: S4400-1000361

Nickel (Ni) – 1000 µg/mL

Lot #: 1338414-10

Matrix: 2% HNO_3

Element	Certified Concentration & Uncertainty
Ni	998.0 ± 4.0 µg/mL (w/v)
	989.0 ± 4.0 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034, ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.996% pure nickel (Ni). The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3136 lot #120619.** The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: S4400-10M521

Sodium (Na) – 10,000 µg/mL

Lot #: 1339275-8

Matrix: 3% HNO_3

Element	Certified Concentration & Uncertainty
Na	10,050 ± 22 µg/mL (w/v)
	9758 ± 21 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034, ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 10,000 µg/mL by gravimetric methods using 99.997% pure sodium carbonate (Na_2CO_3). The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3152a, lot #200413**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: S4400-1000531

Strontium (Sr) – 1000 µg/mL

Lot #: 1303809-5

Matrix: 2% HNO_3

Element	Certified Concentration & Uncertainty
Sr	996.0 ± 5.0 µg/mL (w/v)
	993.0 ± 5.0 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034, ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.9965% pure strontium nitrate [$Sr(NO_3)_2$]. The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3153a, lot #990906**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: S4400-1000641

Uranium (U) – 1000 µg/mL

Lot #: 1249254-17

Matrix: 2% HNO_3

Element	Certified Concentration & Uncertainty
U	995.0 ± 5.0 µg/mL (w/v)
	990.0 ± 5.0 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034**, **ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.99% pure uranyl nitrate hexahydrate $\{UO_2(NO_3)_2{\cdot}6H_2O\}$. The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3164, lot #080521**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 17034, ISO/IEC 17025 and ISO 9001**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.995% pure vanadium pentoxide (V_2O_5). The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3165, lot #160906**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Packaging, Storage, Instructions For Use

Store at room temperature (15-30°C)

This certified reference material (CRM) is packaged in HDPE as a whole volume ready to use sample. No secondary preparative steps are necessary. Allow to equilibrate to room temperature before use. Small aliquots should be poured out of the bottle rather than directly pipetted out of bottle in order to prevent contamination or premature degradation. This Certified Reference Material (CRM) has been prepared and certified under an ISO 9001 (certified by Perry Johnson), ISO/IEC 17025 (accredited by ANAB), and ISO 17034 (accredited by ANAB) quality system.

Traceability Information

Analyte Source Materials: The highest purity analyte source materials are used in the manufacture of this CRM. The traceability of this standard is maintained through an unbroken chain of comparisons to appropriate standards with suitable procedure and measurement uncertainties.

Method: This CRM was verified by ICP.

Balance: The standard weights (NBS weights Inventory No 20231A) are calibrated every two years by South Carolina Metrology Laboratory that is a participant in 'NIST Weights and Measures Measurement Assurance Program' with a certificate of measurement traceability to NIST primary standards. The balances are calibrated yearly by the ISO 17025 accredited metrology service, and are verified weekly by an in-house method using standard weights.

Thermometer: The standard thermometers are calibrated every year by the ISO 17025 accredited metrology service. The thermometers used in-house are verified against the standard thermometers yearly.

Glassware: All glassware used in the manufacture of our CRMs is Class A. An in-house standard operating procedure is used to verify all glassware prior to it being placed into service. The calibrations of volumetric vessels are verified using the ASTM method E542.

Cd	100.0 ± 0.5 µg/mL	Ni	100.0 ± 0.5 µg/mL		

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited **ISO 17034, ISO/IEC 17025 and** to **ISO 9001**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was diluted with filtered (0.22 µm), 18 M-ohm deionized water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

MERCURY
(WATER)

CASE NARRATIVE

Client : PARSONS

Project: TITAN 1-A

SDG : 24F034

METHOD SW7470A
MERCURY BY COLD VAPOR

One(1) water sample was received on 06/07/24 to be analyzed for Mercury by Cold Vapor in accordance with Method SW7470A and project specific requirements.

Holding Time
The sample was digested and analyzed within the prescribed holding time.

Calibration
Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using a secondary source (ICV). Continuing calibration (CCV) verifications were carried out on a frequency specified by the project. All calibration requirements were within acceptance criteria. MRL was analyzed as required by the project.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Mercury was not detected in HGF009WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. HGF009WL/HGF009WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed. Mercury was within MS QC limits in F034-01M/F034-01S. Refer to Matrix QC summary form for details.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

Product:	1000 mg/L Mercury
Catalog Number:	027
Lot No.	120721m
Starting Material:	Mercury Metal (Hg)
Matrix:	18 megohm deionized water and 1% (v/v) HNO_3
Density:	1.0083 ± 0.0002 g/mL 20.4 °C and 747 mm Hg
Verification Method:	CVAA
Certificate Issue Date:	July 30, 2021
Expiration Date:	July 8, 2024
Revision Number:	Original

CERTIFICATE OF ANALYSIS

SM3A-10-01-02
Rec 11/27/23

AccuTrace™ Reference Standard

Catalog No: AA34N-R-1
Description: Mercury AA Standard
Element: Mercury (Hg)
SRM: 3133
Lot: 223035030
Matrix: 10% Nitric acid
Hazards: *Refer to SDS for complete safety information*

Signal Word: Danger

Date Certified: Mar 10, 2023
Expiration: Mar 10, 2028
Sample Size: 100 mL
Components: 1
Storage Condition: Ambient (>5 °C)

Certified Reference Material

ANAB ACCREDITED AR-1463 ISO/IEC 17025 ISO 17034 ILAC-MRA

Component		SRM #	Prepared Concentration (µg/mL)
Hg	Mercury	3133	1000

This Certified Reference Material was verified in accordance with ISO/IEC 17025 (AT 1339) and ISO 17034 (AR-1463)

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

This product contains mercury and MUST be disposed of in accordance with all federal, state and local regulations.

The gravimetric uncertainty for this product is ±0.24%. The CRM uncertainty is ±2.4%

We use the highest purity raw materials available to minimize impurity levels in the final solution. Typically 99.999%+ pure starting materials are used as well as high purity acids and ASTM Type I 18 megohm deionized water.

All weights are traceable through NIST, Test No. 684/291344-18 & 684/292805-19

All glassware used in preparation is Class A.

Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware. Keep bottle tightly capped.

Certified By: Meghan O'Leary, Inorganic QC Manager

For use in routine laboratory analysis

MERCURY
(SOIL)

CASE NARRATIVE

Client : PARSONS

Project: TITAN 1-A

SDG : 24F034

METHOD SW7471B
MERCURY BY COLD VAPOR

One(1) soil sample was received on 06/07/24 to be analyzed for Mercury by Cold Vapor in accordance with Method SW7471B and project specific requirements.

Holding Time
The sample was analyzed within the prescribed holding time.

Calibration
Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using a secondary source (ICV). Continuing calibration (CCV) verifications were carried out on a frequency specified by the project. All calibration requirements were within acceptance criteria. MRL was analyzed as required by the project.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Mercury was not detected in HGF007SB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. HGF007SL/HGF007SC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed. Mercury was within MS QC limits in F034-02M/F034-02S. Refer to Matrix QC summary form for details.

Sample Analysis
The sample was analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

SM3A-10-01-01
Recv 6/8/21 JF
Exp. 7/8/24

Product:	1000 mg/L Mercury
Catalog Number:	027
Lot No.	120721m
Starting Material:	Mercury Metal (Hg)
Matrix:	18 megohm deionized water and 1% (v/v) HNO_3
Density:	1.0083 ± 0.0002 g/mL 20.4 °C and 747 mm Hg
Verification Method:	CVAA
Certificate Issue Date:	July 30, 2021
Expiration Date:	July 8, 2024
Revision Number:	Original

CERTIFICATE OF ANALYSIS

SM3A-10-01-02
Rec 11/27/23

AccuTrace™ Reference Standard

Catalog No: AA34N-R-1
Description: Mercury AA Standard
Element: Mercury (Hg)
SRM: 3133
Lot: 223035030
Matrix: 10% Nitric acid
Hazards: *Refer to SDS for complete safety information*

Signal Word: Danger

Date Certified: Mar 10, 2023
Expiration: Mar 10, 2028
Sample Size: 100 mL
Components: 1
Storage Condition: Ambient (>5 °C)

Certified Reference Material

ANAB ACCREDITED PROVIDER AR-1463

ilac-MRA

Component		SRM #	Prepared Concentration (µg/mL)
Hg	Mercury	3133	1000

This Certified Reference Material was verified in accordance with ISO/IEC 17025 (AT-1339) and ISO 17034 (AR-1463)

A product with a suffix (-1A, -2B, etc. or -01, -02, etc.) on its lot number has had its expiration date extended and is identical to the same lot number without the suffix.

This product contains mercury and MUST be disposed of in accordance with all federal, state and local regulations.

The gravimetric uncertainty for this product is ±0.24%. The CRM uncertainty is ±2.4%

We use the highest purity raw materials available to minimize impurity levels in the final solution. Typically 99.999%+ pure starting materials are used as well as high purity acids and ASTM Type I 18 megohm deionized water.

All weights are traceable through NIST, Test No. 684/291344-18 & 684/292805-19

All glassware used in preparation is Class A

Shake bottle prior to use and do not pipette directly out of the bottle. Use only cleaned Class A volumetric glassware. Keep bottle tightly capped

Certified By: Meagan O'Leary
Meagan O'Leary, Inorganic QC Manager

For use in routine laboratory analysis.

AccuStandard is accredited to ISO 17034, ISO/IEC 17025 and certified to ISO 9001:2015

LABORATORY NARRATIVE
DoD QSM - TO-15
PARSONS GOVERNMENT SERVICES INC.
Workorder# 2406133

Twenty-two 1 Liter Summa Canister samples were received on June 03, 2024. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Please note the following narratives are project specific therefore may or may not be applicable to the associated sample set:

1) A Limit of Detection (LOD) and Method Detection Limit (MDL) study are not maintained for Total Xylenes and non-standard compounds.

2) Total Xylenes concentration is calculated by summing the individual concentrations of m,p-Xylene and o-Xylene.

3) Non-standard compounds may have different acceptance criteria than the standard TO-14A/TO-15 compound list as per contract or verbal agreement.

Receiving Notes

The Chain of Custody (COC) information for sample T1AMF-SV019_May24 did not match the information on the canister with regard to canister barcode. The sample labeled 1L4781 on the COC is labeled as 1L4761 on the canister. The client was notified of the discrepancy and the information on the canister was used to process and report the sample.

Samples T1AMF-SV021_May24 and T1AMF-SV020_May24 were received with significant vacuum remaining in the canister. The residual canister vacuum resulted in elevated reporting limits.

Sample T1AMF-SV021_May24 was cancelled on 6/13/24 per client's request.

Analytical Notes

A DoD QSM waiver has been established and approved between Eurofins Air Toxics and the client. A copy of the waiver is available upon request.

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Samples were analyzed in two analytical batches on MSD-3 on 6/13/24 and 6/14/24. The initial continuing calibration verification (CCV) for the batches are reported as lab fractions 24A and 24B and the ending CCV are reported as lab fractions 24C and 24D.

Dilution was performed on samples T1AMF-SV001_May24, T1AMF-SV024_May24 and T1AMF-SV022_May24 due to the presence of high level target species.

Samples were received by courier, therefore shipping documents are not applicable.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Initial Calibration Narrative
324Q0423A.m

A multi-point **AT-23** initial calibration was analyzed on MSD-3 on 04/23/24 and 4/24/24.

ICAL: 0 out.
Naphthalene @ 9.922%RSD.

The low point spike verification file is 3042307x.d for BTEXS.

ICV: 2 out. Vinyl Acetate @ 154% recovery and n-Butanol @ 167% recovery. File: 3042404.d
Naphthalene Recovery: @ 112%
DOD QSM: 2 out. Vinyl Acetate @ 154% recovery and n-Butanol @ 167% recovery. See File: 3042404a.d
RCP: 0 out RCP. See File: 3042404c.d

Naphthalene and Acrolein were adjusted in the ICV due to the certified concentration exceeding more than 15% of the nominal concentration

The concentrations for Acetonitrile, Ethanol, Acrolein, Tert-Butanol, and Naphthalene were adjusted in the calibration due to the certified concentration exceeding more than 15% of the nominal concentration.

-Ethanol was curved at 1.232ppbv→246.4ppbv
-Acrolein was curved at 1.165ppbv→233ppbv
-Acetonitrile was curved at 1.176ppbv→235.2ppbv
-Tert-Butanol was curved at 1.152ppbv →230.4ppbv
-Naphthalene calibrated 0.116ppbv→23.2ppbv

A multi-point **AT-21 Supplemental** initial calibration was analyzed on MSD-3 on 4/18/24.

-Freon 143a was curved at 5.0ppbv→200ppbv **(Raised RL)**

No ICV.

BFB tune files: 3042306, and 3042402.

The AT23MDL Expires 8/29/24.

IS and Associated Target Compounds and Surr.
Instruction #: I1.20

Modified EPA Methods TO-14A/TO-15
Internal Standard and Associated Target Compounds and Surrogates

Bromochloromethane*
Target Compounds:
Freon 12
Freon 114
Chloromethane
Vinyl Chloride
1,3-Butadiene
Bromomethane
Chloroethane
Freon 11
Ethanol
Freon 113
1,1-Dichloroethene
Acetone
2-Propanol
Carbon Disulfide
3-Chloropropene
Methylene Chloride
Methyl tert-butyl ether
trans-1,2-Dichloroethene
Hexane
1,1-Dichloroethane
2-Butanone (Methyl Ethyl Ketone)
cis-1,2-Dichloroethene
Tetrahydrofuran
Chloroform
1,1,1-Trichloroethane
Cyclohexane
Carbon Tetrachloride
2,2,4-Trimethylpentane
Surrogates:
1,2-Dichloroethane-d4

1,4-Difluorobenzene
Target Compounds:
Benzene
1,2-Dichloroethane
Heptane
Trichloroethene
1,2-Dichloropropane
1,4-Dioxane
Bromodichloromethane
cis-1,3-Dichloropropene
4-Methyl-2-pentanone
Toluene
Surrogates:
Toluene-d8

Chlorobenzene-d5
Target Compounds:
trans-1,3-Dichloropropene
1,1,2-Trichloroethane
Tetrachloroethene
2-Hexanone
Dibromochloromethane
1,2-Dibromoethane (EDB)
Chlorobenzene
Ethyl Benzene
m,p-Xylene
o-Xylene
Styrene
Bromoform
Cumene
1,1,2,2-Tetrachloroethane
Propylbenzene
4-Ethyltoluene
1,3,5-Trimethylbenzene
1,2,4-Trimethylbenzene
1,3-Dichlorobenzene
1,4-Dichlorobenzene
alpha-Chlorotoluene
1,2-Dichlorobenzene
1,2,4-Trichlorobenzene
Hexachlorobutadiene
Surrogates:
Bromofluorobenzene

*Note: If Bromochloromethane (BCM) is required as a target compound, the internal standard mix is blended without BCM. Compounds and surrogates assigned to BCM are re-assigned to 1,4-Difluorobenzene for calibration and subsequent quantitation.

1st Review: All w/in ±15%, MJB 4/14/23
2nd Review: All w/in ±5% JL 4/14/23

Primary Reference Material intended for the calibration of gas analyzers or instrumentation. General instructions for proper use of gas mixtures are found in "ISO 16664: Gas analysis – handling of calibration gases and gas mixtures".

Contents under pressure, store in secure area and do not expose to temperatures greater than 150 °F.

Recommended Operating temperature within 32°F (0°C) and 125°F (52°C).

Recommended minimum sample size 10 mL.

Except where noted, results are reported in mole/mole ppm as determined by Gas Chromatography using qualified reference standards under ANA-50-741-ALP and ANA-50-742-ALP and meets ISO/IEC 17025 requirements. Every cylinder is analyzed and represents one unique lot.

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor providing a level of confidence of 95% and has been carried out in accordance with ISO/IEC 17025 requirements.

This report is issued in accordance with the laboratory accreditation requirements of ANAB. It provides traceability of measurement to recognized national standards, and to units of measurement realized by the National Institute of Standards and Technology (NIST).

MJS 2/13/23.

2ND REVIEW: 27 ±15%
& 2/13/23

Primary Reference Material intended for the calibration of gas analyzers or instrumentation. General instructions for proper use of gas mixtures are found in "ISO 16664: Gas analysis – handling of calibration gases and gas mixtures".

Contents under pressure, store in secure area and do not expose to temperatures greater than 150 °F.

Recommended Operating temperature within 32°F (0°C) and 125°F (52°C).

Recommended minimum sample size 10 mL.

Except where noted, results are reported in mole/mole ppm as determined by Gas Chromatography using qualified reference standards under ANA-50-741-ALP and ANA-50-742-ALP and meets ISO/IEC 17025 requirements. Every cylinder is analyzed and represents one unique lot.

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor providing a level of confidence of 95% and has been carried out in accordance with ISO/IEC 17025 requirements.

This report is issued in accordance with the laboratory accreditation requirements of ANAB. It provides traceability of measurement to recognized national standards, and to units of measurement realized by the National Institute of Standards and Technology (NIST).

INTERNAL STANDARD COMPOUNDS
AREA AND RT SUMMARY

Instrument ID: msd3.i
Lab File ID: 3042314.d
Lab Smp Id: ICAL Level #9
Analysis Type: VOA
Quant Type: ISTD
Operator: DF
Method File: /chem/msd3.i/23APR24.b/324q0423a.m
Misc Info: 200ppbv (200ppbv)

Calibration Date: 23-APR-2024
Calibration Time: 23:59
Client Smp ID: ICAL Level #9
Level: LOW
Sample Type: AIR

		AREA LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
90 Bromochloromethan	106185	63711	148659	110600	4.16
108 1,4-Difluorobenze	390964	234578	547350	421244	7.74
153 Chlorobenzene-d5	392003	235202	548804	429525	9.57

		RT LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
90 Bromochloromethan	5.44	5.11	5.77	5.44	-0.00
108 1,4-Difluorobenze	6.43	6.10	6.76	6.43	-0.00
153 Chlorobenzene-d5	9.16	8.83	9.49	9.16	-0.00

AREA UPPER LIMIT = + 40% of internal standard area.
AREA LOWER LIMIT = - 40% of internal standard area.
RT UPPER LIMIT = + 0.33 minutes of internal standard RT.
RT LOWER LIMIT = - 0.33 minutes of internal standard RT.

TO-15 QUAD POOLED MDL CASE NARRATIVE

A Method Detection Limit Study for TO-15 Quad method was analyzed 8/01/23-8/29/23 for MSDA, MSD3, MSDP, MSDJ, MSD16, and MSD91.

0.5ppbv MDL: Standard # 3018-3932, 3018-3942, 3018-3921 (5.0ppbv); 20mL load volume. Spike amount of 0.5ppbv.

Notes:

1. MDL verification was analyzed on 9/01/23. Standard #3018-3942; 5.0ppbv, 18mL load volume; file #91090108; spike concentration of 0.45ppbv.
2. MDL spike calculated on file #91081408x
3. The MDL spikes for MSD-91 were re-analyzed due to the initial spikes having multiple compounds recover outside of 50-150%.

2.0ppbv MDL: Standard # 3018-3932, 3018-3942, 3018-3921 (5.0ppbv); 80mL load volume. Spike amount of 2.0ppbv.

Notes:

1. MDL verification was analyzed on 9/01/23. Standard #3018-3942; 5.0ppbv, 60mL load volume; file #91090109; spike concentration of 1.5ppbv.
2. MDL verification for Ethanol and Acetone was analyzed on 9/01/23. Standard #3018-3942; 5.0ppbv, 160ml load volume; file#91090111; spike concentration of 4.0ppbv.
3. MDL spike calculated on file# 91080109x
4. MDL verification for Napthalene was analyzed on 9/01/23. Standard #3018-3942; 5.0ppbv, 80ml load volume; file#91090110; spike concentration of 2.0ppbv (0.2ppbv for Napthalene).
5. MDL spike calculated on file# 91080109ax

The concentrations for Acetonitrile,Tert-butanol, Naphthalene, Ethanol, and Acrolein were adjusted in the MDL spike due to the certified concentration exceeding more than 15% of nominal concentration.

MDL values for the following compounds were taken from the MDL blank:

Acetone (1.3907ppbv)
1,3-Dichlorobenzene (0.11681ppbv)
1,4-Dichlorobenzene (0.16832ppbv)

The ratio of the mean recovered concentration was between 1 and 20 for all compounds.

Iodomethane and trans-1,4-Dichlorobutane were not included in the MDL study.

MDL Expires 8/29/24

AT23 0.5ppbv Quad Pooled MDL

MDL Verification for 0.5ppbv MDL
Standard #3018-3942 (5.0ppbv)
Load volume of 18ml.
Spike concentration of 0.45ppbv.
File#91090108

The ratio of the mean recovered concentration and the MDL was between 1 and 20 for all compounds.

SPIKED METHOD DETECTION LIMIT SUMMARY REPORT

Method File: /chem/msda.i/29AUG23.b/a23q0825a.m Spiked ID(s) Spiked Vol(s)

Batch File: /chem/msda.i/29AUG23.b

Instrument Names: msdp.i

Student T 2.718 for 12 Replicates with 99% Confidence B(s14H

The ratio of the mean recovered concentration and the MDL was between 1 and 20 for all compounds.

INTERNAL STANDARD COMPOUNDS
AREA AND RT SUMMARY

Instrument ID: msd3.i
Lab File ID: 3061403a.d
Lab Smp Id: CCV
Analysis Type: VOA
Quant Type: ISTD
Operator: RT
Method File: /chem/msd3.i/14JUN24.b/324q0423a.m
Misc Info: 50ppbv (200ppbv)

Calibration Date: 15-JUN-2024
Calibration Time: 08:26
Client Smp ID: CCV
Level: LOW
Sample Type: AIR

		AREA LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
90 Bromochloromethan	94062	56437	131687	97298	3.44
108 1,4-Difluorobenze	341260	204756	477764	356185	4.37
153 Chlorobenzene-d5	337707	202624	472790	352841	4.48

		RT LIMIT			
COMPOUND	STANDARD	LOWER	UPPER	SAMPLE	%DIFF
90 Bromochloromethan	5.43	5.10	5.76	5.43	-0.00
108 1,4-Difluorobenze	6.42	6.09	6.75	6.42	-0.00
153 Chlorobenzene-d5	9.15	8.82	9.48	9.15	-0.00

AREA UPPER LIMIT = + 40% of internal standard area.
AREA LOWER LIMIT = - 40% of internal standard area.
RT UPPER LIMIT = + 0.33 minutes of internal standard RT.
RT LOWER LIMIT = - 0.33 minutes of internal standard RT.

Shipping/Receiving Documents

eurofins | Air Toxics

Eurofins Air Toxics Sample Receipt Confirmation Cover Page

Thank you for choosing Eurofins Air Toxics (EATL). We have received your samples and have listed any Sample Receipt Descrepancies below.

In order to expedite analysis and reporting, please review the attached information for accuracy.

For corrections call: **Air Toxics, Ltd. at 916-985-1000**

EATL will proceed with the analysis as specified on the Chain of Custody (COC) and Sample Receipt Summary page.

Please note : The Sample Receipt Confirmation, including the total workorder charge, is subject to change upon secondary review. Our aim is to provide a confirmation to you in a timely manner. Sample Receipt Discrepancies, if any, may not include discrepancies regarding sample receipt pressure(s). Additionally, the COC will be provided with the final report.

The following discrepancies have been observed:

The Chain of Custody (COC) information for sample T1AMF-SV019_May24 did not match the information on the canister with regard to canister barcode. The sample labeled 1L4781 on the COC is labeled as 1L4761 on the canister. Unless otherwise notified, Eurofins Air Toxics will proceed with the analysis using the information on the canister to process and report the sample.

Sample Discrepancy Report

Identification

Initiated By: LL **Project ID:**28661 **PM**: BSW **Date:** 6/10/2024 **Discrepancy Type:** ☒ **1.** ☒ **2.** ☐ **3.**

Workorder(s) affected:2406133 **Sample(s) affected:** 20A;02A and 11A

1. Sample Receipt Discrepancies

Narration Not Required:

1.1. ☐ Sample container (cartridge/tube) was received broken, however sample was intact.
1.2. ☐ No brass cap on canister.
1.3. ☐ Date of Collection noted on first sample, but no arrow down to indicate all samples.
1.4. ☐ Sampling year not documented on COC but noted on sample tag.
1.5. ☐ Sorbent Sample received outside method required temperature of 2°C to 6°C but less than 6°C.

Notify Lab for further determination:

1.6. ☐ Tedlar bag received with minimal volume.

Narration Required in Lab Narrative and Sample Confirmation:

1.7. ☐ COC was not filled out in ink.
1.8. ☐ COC improperly relinquished / received.
☐Signature missing ☐date missing ☐time missing.
1.9. ☐ Sample ID on tags do not match the COC.
1.10. ☒ Can numbers do not match the COC.
1.11. ☐ Sampling date discrepancy.
1.12. ☐ Custody Seal on the outside of the container was ☐ broken / ☐ improperly placed (check one).
1.13. ☐ ID-none on the sample Tag/Blank.
1.14. ☐ Other (describe below).

Initials: _____Date:_____

Describe the Discrepancy: 1.10 - 20A

2. Sample Receipt/Screening Discrepancies requiring PM notification

Document on Cover Page of Sample Receipt Confirmation and in Receiving Notes of Lab Narrative

If Section II. is filled out PM must be notified within 24 hrs of initiation

2.1. ☐ COC was not received with samples.
2.2. ☐ Analysis method(s) is ☐ not specified / ☐ incorrectly specified (check one) on the COC.
2.3. ☐ Incorrect sampling media / container for analysis requested.
2.4. ☐ Number of samples on the COC does not match the number of samples that were received.
2.5. ☐ Samples were received expired.
2.6. ☐ Sampling date is not documented for ☐ *some* / ☐ *any* samples (check one).
2.7. ☐ Sample received with amount of H_2O in the Tedlar Bag.
2.8. ☐ Sample cannot be analyzed. Container was ☐ received broken / ☐ leaking / ☐ flat / ☐ defective.
2.9. ☐ Tedlar bag / canister received emitting a strong odor; Sample ☐ can / ☐ cannot (check one) be analyzed.
2.10. ☐ Sorbent samples -sampling volume was not provided.
2.11. ☐ Flow controller used – canister samples received at ambient or under pressure.
2.12. ☐ Canister was at ambient pressure at time of pressurization and (check all that apply):
☐ Canister valve was open.
☐ Brass nut was loose/not present.
☐ Sample can be analyzed.
☐ Sample cannot be analyzed.
2.13. ☐ Canister sample received with a vacuum difference >5.0"Hg between the receipt vac. and the final recorded vac. on the COC.
☐ Canister passed leak check in lab <2psi, no evidence sample was compromised.
☐ Canister failed lab leak check, canister found to be leaking. Canister sample compromised.
2.14. ☒ Canister sample received at >15"Hg (*not* identified as a Trip/Field Blank).
2.15. ☐ Canister Trip Blank received at low vacuum (<25"Hg).
2.16. ☐ Sorbent Sample received outside method required temperature of 2°C to 6°C; ☐ ice / ☐ blue ice (check one) was present. A temp. Blank ☐ was / ☐ was not present (check one).
2.17. ☐ Other (describe below).

Initials: jyw **Date:** 6/13/2024 **Notify Receiving:** ☐ **Notify PM:** ☐

Describe the Discrepancy: 2.14-02A and 11A

3. Lab Discrepancies requiring Team Leader/PM notification

Document in Analytical Notes of Lab Narrative

If Section III. is filled out PM must be notified within 24 hrs of initiation

3.1. ☐ Tedlar Bag found to be leaking at the time of analysis; sample ☐ can / ☐ cannot (check one) be analyzed.

3.2. ☐ Tedlar Bag found to be flat/low volume; sample cannot be analyzed.

3.3. ☐ Samples received with insufficient time to analyze prior to expiration.

3.4. ☐ Canister found to be leaking at the time of analysis.

3.5. ☐ Sample loss due to instrument malfunction / broken glassware.

3.6. ☐ Low/high surrogate recoveries noted in QC/sample(s) for extractable samples.

3.7. ☐ Reporting Limit was raised.

3.8. ☐ Post weight > Pre weight in field/lab Blank for PM10/TSP samples.

3.9. ☐ Sample Trip Blank has a reportable level(s) of target compound(s) present. Re-analysis confirmed the initial result.

3.10. ☐ Other (describe below).

Initials: _____ **Date:** _____ **Notify Receiving:** ☐ **Notify PM:** ☐ _____

LABORATORY NARRATIVE
DoD QSM - TO-15
PARSONS GOVERNMENT SERVICES INC.
Workorder# 2406264R2

Fourteen 1 Liter Summa Canister samples were received on June 06, 2024. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Please note the following narratives are project specific therefore may or may not be applicable to the associated sample set:

1) A Limit of Detection (LOD) and Method Detection Limit (MDL) study are not maintained for Total Xylenes and non-standard compounds.

2) Total Xylenes concentration is calculated by summing the individual concentrations of m,p-Xylene and o-Xylene.

3) Non-standard compounds may have different acceptance criteria than the standard TO-14A/TO-15 compound list as per contract or verbal agreement.

Receiving Notes

Samples T1AMF-SV027_JUN24 and T1AMF-SV029_JUN24 were received with significant vacuum remaining in the canister. The residual canister vacuum resulted in elevated reporting limits.

The Work Order was reissued on July 8, 2024 to revise sample identification per client request.

The Work Order was reissued on July 11, 2024 to revise sample identification per client request.

Analytical Notes

A DoD QSM waiver has been established and approved between Eurofins Air Toxics and the client. A copy of the waiver is available upon request.

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Samples were analyzed in one analytical batch on MSD-3 on 06/19/24. The initial continuing calibration verification (CCV) for the batch is reported as lab fraction 16A and the ending CCV is reported as lab fraction 16B.

Dilution was performed on sample T1AMF-SV032A_JUN24 due to the presence of high level target species.

Samples were received by courier, therefore shipping documents are not applicable.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Initial Calibration Narrative
324Q0423A.m

A multi-point **AT-23** initial calibration was analyzed on MSD-3 on 04/23/24 and 4/24/24.

ICAL: 0 out.
Naphthalene @ 9.922%RSD.

The low point spike verification file is 3042307x.d for BTEXS.

ICV: 2 out. Vinyl Acetate @ 154% recovery and n-Butanol @ 167% recovery. File: 3042404.d
Naphthalene Recovery: @ 112%
DOD QSM: 2 out. Vinyl Acetate @ 154% recovery and n-Butanol @ 167% recovery. See File: 3042404a.d
RCP: 0 out RCP. See File: 3042404c.d

Naphthalene and Acrolein were adjusted in the ICV due to the certified concentration exceeding more than 15% of the nominal concentration

The concentrations for Acetonitrile, Ethanol, Acrolein, Tert-Butanol, and Naphthalene were adjusted in the calibration due to the certified concentration exceeding more than 15% of the nominal concentration.

-Ethanol was curved at 1.232ppbv→246.4ppbv
-Acrolein was curved at 1.165ppbv→233ppbv
-Acetonitrile was curved at 1.176ppbv→235.2ppbv
-Tert-Butanol was curved at 1.152ppbv →230.4ppbv
-Naphthalene calibrated 0.116ppbv→23.2ppbv

A multi-point **AT-21 Supplemental** initial calibration was analyzed on MSD-3 on 4/18/24.

-Freon 143a was curved at 5.0ppbv→200ppbv **(Raised RL)**

No ICV.

BFB tune files: 3042306, and 3042402.

The AT23MDL Expires 8/29/24.

IS and Associated Target Compounds and Surr.
Instruction #: I1.20

Modified EPA Methods TO-14A/TO-15
Internal Standard and Associated Target Compounds and Surrogates

Bromochloromethane*
Target Compounds:
Freon 12
Freon 114
Chloromethane
Vinyl Chloride
1,3-Butadiene
Bromomethane
Chloroethane
Freon 11
Ethanol
Freon 113
1,1-Dichloroethene
Acetone
2-Propanol
Carbon Disulfide
3-Chloropropene
Methylene Chloride
Methyl tert-butyl ether
trans-1,2-Dichloroethene
Hexane
1,1-Dichloroethane
2-Butanone (Methyl Ethyl Ketone)
cis-1,2-Dichloroethene
Tetrahydrofuran
Chloroform
1,1,1-Trichloroethane
Cyclohexane
Carbon Tetrachloride
2,2,4-Trimethylpentane
Surrogates:
1,2-Dichloroethane-d4

1,4-Difluorobenzene
Target Compounds:
Benzene
1,2-Dichloroethane
Heptane
Trichloroethene
1,2-Dichloropropane
1,4-Dioxane
Bromodichloromethane
cis-1,3-Dichloropropene
4-Methyl-2-pentanone
Toluene
Surrogates:
Toluene-d8

Chlorobenzene-d5
Target Compounds:
trans-1,3-Dichloropropene
1,1,2-Trichloroethane
Tetrachloroethene
2-Hexanone
Dibromochloromethane
1,2-Dibromoethane (EDB)
Chlorobenzene
Ethyl Benzene
m,p-Xylene
o-Xylene
Styrene
Bromoform
Cumene
1,1,2,2-Tetrachloroethane
Propylbenzene
4-Ethyltoluene
1,3,5-Trimethylbenzene
1,2,4-Trimethylbenzene
1,3-Dichlorobenzene
1,4-Dichlorobenzene
alpha-Chlorotoluene
1,2-Dichlorobenzene
1,2,4-Trichlorobenzene
Hexachlorobutadiene
Surrogates:
Bromofluorobenzene

*Note: If Bromochloromethane (BCM) is required as a target compound, the internal standard mix is blended without BCM. Compounds and surrogates assigned to BCM are re-assigned to 1,4-Difluorobenzene for calibration and subsequent quantitation.

1st Review: All w/in ±15%, MJB 4/14/23
2nd Review: All w/in ±5% JL 4/14/23

Primary Reference Material intended for the calibration of gas analyzers or instrumentation. General instructions for proper use of gas mixtures are found in "ISO 16664: Gas analysis – handling of calibration gases and gas mixtures".

Contents under pressure, store in secure area and do not expose to temperatures greater than 150 °F.

Recommended Operating temperature within 32°F (0°C) and 125°F (52°C).

Recommended minimum sample size 10 mL.

Except where noted, results are reported in mole/mole ppm as determined by Gas Chromatography using qualified reference standards under ANA-50-741-ALP and ANA-50-742-ALP and meets ISO/IEC 17025 requirements. Every cylinder is analyzed and represents one unique lot.

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor providing a level of confidence of 95% and has been carried out in accordance with ISO/IEC 17025 requirements.

This report is issued in accordance with the laboratory accreditation requirements of ANAB. It provides traceability of measurement to recognized national standards, and to units of measurement realized by the National Institute of Standards and Technology (NIST).

2ND REVIEW: 27 ± 15%
& 2/13/23

Primary Reference Material intended for the calibration of gas analyzers or instrumentation. General instructions for proper use of gas mixtures are found in "ISO 16664: Gas analysis – handling of calibration gases and gas mixtures".

Contents under pressure, store in secure area and do not expose to temperatures greater than 150 °F.

Recommended Operating temperature within 32°F (0°C) and 125°F (52°C).

Recommended minimum sample size 10 mL.

Except where noted, results are reported in mole/mole ppm as determined by Gas Chromatography using qualified reference standards under ANA-50-741-ALP and ANA-50-742-ALP and meets ISO/IEC 17025 requirements. Every cylinder is analyzed and represents one unique lot.

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor providing a level of confidence of 95% and has been carried out in accordance with ISO/IEC 17025 requirements.

This report is issued in accordance with the laboratory accreditation requirements of ANAB. It provides traceability of measurement to recognized national standards, and to units of measurement realized by the National Institute of Standards and Technology (NIST).

Operator : DF Inst ID: msd3.i
Smp Info : 50ml 3018-4439
Misc Info : 50ppbv (200ppbv)
Comment : STANDARD LEVEL - GC/MS
Method : /chem/msd3.i/23APR24.b/324q0423a.m
Meth Date : 26-Apr-2024 08:44 z8dr Quant Type: ISTD
Cal Date : 23-APR-2024 23:59 Cal File: 3042312.d
Als bottle: 13 Calibration Sample, Level: 7
Dil Factor: 1.00000
Integrator: HP RTE Compound Sublist: AT23ICAL.sub
Sample Matrix: AIR
Processing Host: us32tar1

Concentration Formula: Amt * DF * CpndVariable

Cpnd Variable Local Compound Variable

TO-15 QUAD POOLED MDL CASE NARRATIVE

A Method Detection Limit Study for TO-15 Quad method was analyzed 8/01/23-8/29/23 for MSDA, MSD3, MSDP, MSDJ, MSD16, and MSD91.

0.5ppbv MDL: Standard # 3018-3932, 3018-3942, 3018-3921 (5.0ppbv); 20mL load volume. Spike amount of 0.5ppbv.

Notes:

1. MDL verification was analyzed on 9/01/23. Standard #3018-3942; 5.0ppbv, 18mL load volume; file #91090108; spike concentration of 0.45ppbv.
2. MDL spike calculated on file #91081408x
3. The MDL spikes for MSD-91 were re-analyzed due to the initial spikes having multiple compounds recover outside of 50-150%.

2.0ppbv MDL: Standard # 3018-3932, 3018-3942, 3018-3921 (5.0ppbv); 80mL load volume. Spike amount of 2.0ppbv.

Notes:

1. MDL verification was analyzed on 9/01/23. Standard #3018-3942; 5.0ppbv, 60mL load volume; file #91090109; spike concentration of 1.5ppbv.
2. MDL verification for Ethanol and Acetone was analyzed on 9/01/23. Standard #3018-3942; 5.0ppbv, 160ml load volume; file#91090111; spike concentration of 4.0ppbv.
3. MDL spike calculated on file# 91080109x
4. MDL verification for Napthalene was analyzed on 9/01/23. Standard #3018-3942; 5.0ppbv, 80ml load volume; file#91090110; spike concentration of 2.0ppbv (0.2ppbv for Napthalene).
5. MDL spike calculated on file# 91080109ax

The concentrations for Acetonitrile,Tert-butanol, Naphthalene, Ethanol, and Acrolein were adjusted in the MDL spike due to the certified concentration exceeding more than 15% of nominal concentration.

MDL values for the following compounds were taken from the MDL blank:

Acetone (1.3907ppbv)
1,3-Dichlorobenzene (0.11681ppbv)
1,4-Dichlorobenzene (0.16832ppbv)

The ratio of the mean recovered concentration was between 1 and 20 for all compounds.

Iodomethane and trans-1,4-Dichlorobutane were not included in the MDL study.

MDL Expires 8/29/24

AT23 0.5ppbv Quad Pooled MDL

MDL Verification for 0.5ppbv MDL
Standard #3018-3942 (5.0ppbv)
Load volume of 18ml.
Spike concentration of 0.45ppbv.
File#91090108

The ratio of the mean recovered concentration and the MDL was between 1 and 20 for all compounds.

Eurofins Air Toxics Sample Receipt Confirmation Cover Page

Thank you for choosing Eurofins Air Toxics (EATL). We have received your samples and have listed any Sample Receipt Descrepancies below.

In order to expedite analysis and reporting, please review the attached information for accuracy.

For corrections call: **Air Toxics, Ltd. at 916-985-1000**

EATL will proceed with the analysis as specified on the Chain of Custody (COC) and Sample Receipt Summary page.

Please note : The Sample Receipt Confirmation, including the total workorder charge, is subject to change upon secondary review. Our aim is to provide a confirmation to you in a timely manner. Sample Receipt Discrepancies, if any, may not include discrepancies regarding sample receipt pressure(s). Additionally, the COC will be provided with the final report.

Hi Vera and Brian. Unfortunately, the ID will need to be fixed on your end. To conform with the sample ID naming in FUDSChem, the ID should be SV009B. Apologies that this was not caught by us and brought to your attention earlier.

Please include this email in the revised report as a record that the ID was requested to be changed by Parsons from what is documented on the COC.

Thank you,
Beth

Hi Beth,
Still not fixed.
Thank you,
Vera

Sample Discrepancy Report

Identification

Initiated By: VS **Project ID:**28661 **PM**: BSW **Date:** 6/20/2024 **Discrepancy Type:** ☐ **1.** ☒ **2.** ☐ **3.**

Workorder(s) affected:2406264 **Sample(s) affected:** 03A,06A

1. Sample Receipt Discrepancies

Narration Not Required:

1.1. ☐ Sample container (cartridge/tube) was received broken, however sample was intact.
1.2. ☐ No brass cap on canister.
1.3. ☐ Date of Collection noted on first sample, but no arrow down to indicate all samples.
1.4. ☐ Sampling year not documented on COC but noted on sample tag.
1.5. ☐ Sorbent Sample received outside method required temperature of 2°C to 6°C but less than 6°C.

Notify Lab for further determination:

1.6. ☐ Tedlar bag received with minimal volume.

Narration Required in Lab Narrative and Sample Confirmation:

1.7. ☐ COC was not filled out in ink.
1.8. ☐ COC improperly relinquished / received.
☐Signature missing ☐date missing ☐time missing.
1.9. ☐ Sample ID on tags do not match the COC.
1.10. ☐ Can numbers do not match the COC.
1.11. ☐ Sampling date discrepancy.
1.12. ☐ Custody Seal on the outside of the container was ☐ broken / ☐ improperly placed (check one).
1.13. ☐ ID-none on the sample Tag/Blank.
1.14. ☐ Other (describe below).

Initials: _____Date:_____

Describe the Discrepancy: _____

2. Sample Receipt/Screening Discrepancies requiring PM notification

Document on Cover Page of Sample Receipt Confirmation and in Receiving Notes of Lab Narrative

If Section II. is filled out PM must be notified within 24 hrs of initiation

2.1. ☐ COC was not received with samples.
2.2. ☐ Analysis method(s) is ☐ not specified / ☐ incorrectly specified (check one) on the COC.
2.3. ☐ Incorrect sampling media / container for analysis requested.
2.4. ☐ Number of samples on the COC does not match the number of samples that were received.
2.5. ☐ Samples were received expired.
2.6. ☐ Sampling date is not documented for ☐ *some* / ☐ *any* samples (check one).
2.7. ☐ Sample received with amount of H_2O in the Tedlar Bag.
2.8. ☐ Sample cannot be analyzed. Container was ☐ received broken / ☐ leaking / ☐ flat / ☐ defective.
2.9. ☐ Tedlar bag / canister received emitting a strong odor; Sample ☐ can / ☐ cannot (check one) be analyzed.
2.10. ☐ Sorbent samples -sampling volume was not provided.
2.11. ☐ Flow controller used – canister samples received at ambient or under pressure.
2.12. ☐ Canister was at ambient pressure at time of pressurization and (check all that apply):
☐ Canister valve was open.
☐ Brass nut was loose/not present.
☐ Sample can be analyzed.
☐ Sample cannot be analyzed.
2.13. ☐ Canister sample received with a vacuum difference >5.0"Hg between the receipt vac. and the final recorded vac. on the COC.
☐ Canister passed leak check in lab <2psi, no evidence sample was compromised.
☐ Canister failed lab leak check, canister found to be leaking. Canister sample compromised.
2.14. ☒ Canister sample received at >15"Hg (*not* identified as a Trip/Field Blank).
2.15. ☐ Canister Trip Blank received at low vacuum (<25"Hg).
2.16. ☐ Sorbent Sample received outside method required temperature of 2°C to 6°C; ☐ ice / ☐ blue ice (check one) was present. A temp. Blank ☐ was / ☐ was not present (check one).
2.17. ☐ Other (describe below).

Initials: vs **Date: 6/20/2024** **Notify Receiving:** ☐ **Notify PM:** ☐

Describe the Discrepancy: 2.14: 03A,06A

3. Lab Discrepancies requiring Team Leader/PM notification

Document in Analytical Notes of Lab Narrative

If Section III. is filled out PM must be notified within 24 hrs of initiation

3.1. ☐ Tedlar Bag found to be leaking at the time of analysis; sample ☐ can / ☐ cannot (check one) be analyzed.

3.2. ☐ Tedlar Bag found to be flat/low volume; sample cannot be analyzed.

3.3. ☐ Samples received with insufficient time to analyze prior to expiration.

3.4. ☐ Canister found to be leaking at the time of analysis.

3.5. ☐ Sample loss due to instrument malfunction / broken glassware.

3.6. ☐ Low/high surrogate recoveries noted in QC/sample(s) for extractable samples.

3.7. ☐ Reporting Limit was raised.

3.8. ☐ Post weight > Pre weight in field/lab Blank for PM10/TSP samples.

3.9. ☐ Sample Trip Blank has a reportable level(s) of target compound(s) present. Re-analysis confirmed the initial result.

3.10. ☐ Other (describe below).

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at Stage 2B validation level and 10% of the data validated at a Stage 4. The following samples were validated at a Stage 4: TIAMF·MW059·MAY24, TIAMF·MW044·MAY24, TIAMF·MW047·MAY24, TIAMF·MW046·MAY24, and TIAMF·MW050·MAY24, Validation was performed following the guidelines outlined in the project-specific UFP QAPP, DoD General Data Validation Guidelines, Rev 1 (Nov 2019) and Data Validation Guidelines Module 1: Data Validation Procedure for Organic Analysis by GC/MS. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Titan 1A Missile Facility, Lincoln CA and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Parsons Corporation, Austin, TX; analyses were performed by EMAX Laboratories, Inc., Torrance, CA and were reported under sample delivery group (SDG) 24F003. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

Field Duplicate RPD

Lab Blank

LCS Recovery

LCS RPD

Prep Hold Time

Surrogate

Test Hold Time

Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 209 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
SW8260C	No additional comments; see Checklist for detail.

Beth Driskill

July 15, 2024

Reviewed by Beth Driskill, Senior Scientist, Parsons Corporation

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method SW8260C, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
TB-1_MAY24 (TB) 24F003-18	Toluene	0.330	< 0.1	< 1	ug/l	U/None*	T	
TB-2_MAY24 (TB) 24F003-19	Toluene	0.290	< 0.1	< 1	ug/l	U/None*	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Qualified Results

No results associated with this sample delivery group required qualification.

Results with Modified Qualifiers

No qualifiers associated with this sample delivery group were modified manually.

Reason Code Definitions

Code	Definition
T	Trip Blank
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: SW8260C (Volatile Organic Compounds by GC/MS)

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		
Were there discrepancies between the COC and the sample labels?	•			The following discrepancies were noted: 1. The analysis was not marked on the COC for samples -01 through -10. 2. The analysis was not included on the container label for any of the samples. 3. The sample ID on the COC was missing the leading "0". An email was sent to the laboratory by Parsons instructing them of the analysis to be performed for all samples and the correct sample ID.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		The LOQ value for the following analytes are greater than the Project Quantitation Limit Goal: 1,4-Dichlorobenzene, Benzene, Ethylbenzene, Trichloroethene, and Vinyl Chloride.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?	•			Both trip blank samples had detections of toluene below the LOQ. All the field samples were non-detect for toluene; therefore, data quality was not impacted and results were not qualified.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not planned to be collected for this sampling event.
Were equipment blanks analyzed at the proper frequency and in control?	•			One equipment blank and one source blank were associated with the samples in this SDG. Both blanks were non-detect for all target analytes.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?		•		A project MS/MSD was not collected with the samples in this SDG and the laboratory did not select a project sample form this SDG for MS/MSD analysis.
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	

Review Questions

Method: SW8260C (Volatile Organic Compounds by GC/MS)

Review Questions	Yes	No	NA	Comment
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?	•			
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Were CCVs run at the required frequency and within project acceptance criteria?	•			
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Were certificates of standard traceability and documentation of standard solution preparation provided?	•			
Were recalculation of QC Elements and Sample Results performed?	•			
Were Relative Retention Times (RRTs) within ± 0.06 RRT units (may be updated based on daily CCV)?	•			
Were chromatograms checked for peak integration? (10% of automated integration and 100% of manual integrations)	•			
Were chromatograms checked for correct baseline/peak integration and possible interferences?	•			
Were qualitative ion mass present?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		

Module 1: Analysis by GC/MS

Lab/SDG: **EMAX / 24F003**

RECALCULATION TYPE	TAB Reference
Tune: Ion Abundance	TUNE
Tailing Factor	not applicable for 8260
Calibration RF	ICAL RF
Calibration RRT	Rel RT
ICV/CCV %D	ICAL RF
Sample Conc. Raw Values	ICAL RF
Sample Conc. Linear Regression	not applicable
Quadratic Regression	not applicable
LCS % Recovery	ICAL RF
Surrogate % Recovery	ICAL RF
MS/MSD % Recovery	ICAL RF
MS/MSD RPD	ICAL RF
Sample Amounts	ICAL RF
Sample Conc. by Volume (Aqueous Only)	ICAL RF
Sample Conc. by Weight (Non-aqueous only)	not applicable

6.1 SAMPLES AND QC	COMMENT
Sample recalculations should include the raw instrument result, re-quantified from the instrument response against the calibration function, and the final reported sample result, including any dilution, preparation factor, or percent moisture (if applicable). The equations in Appendix B can be used to calculate a sample result from the corresponding reported calibration or regression function, as appropriate	Provided in ICAL RF tab
Verify that one or more of the laboratory's reporting limits (such as limit of quantitation) are calculated correctly for the non-detects and reported accordingly. If a detection limit study was identified by the QAPP, recalculate one or more analyte detection limits.	Provided in LOQ Recalc tab
Re-quantitate **all detected target analytes in the 10% sample data chosen**. For some samples, all results may be non-detects, therefore recalculation would not be necessary. Verify that sample-specific results have been adjusted correctly to reflect percent solids, original sample mass/volume, and any applicable dilutions.	Provided in ICAL RF tab

Module 1: Analysis by GC/MS

Lab/SDG: EMAX / 24F003

Re-quantitate **all detects found in the field QC blanks** (such as trip blanks, field blanks, or equipment blanks). Field QC sample duplicate recalculations should include re-quantification of the same detected analyte sample/duplicate pair and verification of the percent difference (%D), or relative percent difference (RPD), as reported	Provided in Blank Detections tab
6.2 Method QC	
Re-quantification of batch QC sample results should use raw instrument response in tandem with the reported calibration factor, response factor, or slope; the preparation information; and percent moisture for solid samples to recreate the reported result.	Provided in ICAL RF tab
6.2.1 Surrogate Spikes	
Verify the concentrations of surrogates from the raw data. Verify that the surrogate result and percent recovery were calculated and reported correctly by re-calculating all surrogates in the 10% of chosen sample data and method QC that were originally selected.	Provided in ICAL RF tab
6.2.2 LCS/LCSD	
To check that the spike percent recovery was calculated and reported correctly, using the equation in Appendix B, re-quantitate and then recalculate all contaminants of concern as outlined in the UFP-QAPP Worksheet #12 or #15. Use a random 10% of the analytes in the LCS/LCSD if contaminants of concern (target analytes) have not been specifically identified. Recalculate RPDs (if applicable) from LCS/LCSD pairs that would result in the qualification of a sample.	Provided in ICAL RF tab
6.2.3 MS/MSD	
Re-quantitate 10% of the target analytes as listed in the UFP-QAPP Worksheet #12 or #15 for both the MS and the MSD. Use a random 10% of the analytes in the MS and MSD if contaminates of concern have not been identified. The RPDs of the recalculated MS/MSD pairs should be calculated from the MS/MSD concentrations, not from the recoveries.	Provided in ICAL RF tab
6.2.4 Method Blanks	
Re-quantitate one or more detects found in the method blank (if applicable) from the reported average RF (or higher order regression, if used) per each batch of samples.	No method blank detections were found; no recalcs needed
6.3 Insturment QC	
6.3.1 Tune Check	
Verify by re-calculating from the quantitation reports, that the mass assignment is correct and that the mass listing is normalized to the specified m/z for at least 10% of the abundance ratios in every tune. Verify by recalculation that the reported DDT degradation and tailing factor are accurate for SVOC performance checks.	Provided in TUNE tab

Module 1: Analysis by GC/MS

Lab/SDG: EMAX / 24F003

6.3.2 Initial (Response Factors and Regressions) and Continuing Calibration Verifications

Initial calibration (ICAL) recalculations should use the raw instrument response for the target analytes and associated internal standards to recreate the calibration curve from the individual calibration standards. If multiple types of calibration curves are employed in an analytical suite, then one analyte per curve type should be recalculated.	Provided in ICAL RF tab
Re-quantitate and recalculate the individual and average RFs, %RSDs, and regression function (if used) and r values reported for at least 10% of the target analytes per each internal standard, (preferably analytes of concern which were identified in the QAPP), per initial calibration curve type.	Provided in ICAL RF tab
Re-quantitate and recalculate the Initial and Continuing Calibration Verification RF result and %D for at least 10% of the target analytes, proportionally per each internal standard and proportionally selecting analytes based on each calibration curve type.	Provided in ICAL RF tab
The laboratory may employ a linear or weighted linear least squares regression. The low standard should be recalculated using the calibration curve and evaluated. RFs should not be evaluated for analytes with linear or higher order regression curves. If the ICAL included refitting of the data back to the model (RSE), the recalculate 10% of the target analytes for the RSE in each ICAL.	Linear regression was not used for any target analytes in this SDG

6.3.3 Internal Standards

Verify all internal standards reported from the raw data for at least one sample per batch of samples, and verify internal standard areas for samples that were qualified due to out-of-control internal standard areas.	No calculations were performed; internal stds were verified as required. Recalculations of all analyte concentrations further confirm IS quantitation.

6.4 Standards Traceability

Check that the stock standards were diluted properly into working standards by recalculating the dilutions of one or more **calibration standards**. Recalculate one or more **surrogate** dilutions. Recalculate one or more method QC sample dilutions (such as **LCS or MS/MSD**) from the stock to the working standard.	Provided in Standards tab

T1AMF-MW056-MAY24	24F004-10N	Water	Field Sample/N	X

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level and 10% of the data validated at a Stage 4. Sample TIAMF·MW045·MAY24 was validated at a Stage 4. Validation was performed following the guidelines outlined in the project-specific UFP QAPP, DoD General Data Validation Guidelines, Rev 1 (Nov 2019) and Data Validation Guidelines Module 1: Data Validation Procedure for Organic Analysis by GC/MS. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Titan 1A Missile Facility, Lincoln CA and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Parsons Corporation, Austin, TX; analyses were performed by EMAX Laboratories, Inc., Torrance, CA and were reported under sample delivery group (SDG) 24F004. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Lab Blank
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 110 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
SW8260C	Samples AB-1-MAY24 and EB-1-MAY24 were collected by mistake and were cancelled. by Parsons.

Beth Driskill

July 16, 2024

Reviewed by Beth Driskill, Senior Scientist, Parsons Corporation

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method SW8260C, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
T1AMF-MW055-MAY24 (N) 24F004-04	1,2-Dichloroethane-d4	119	81 - 118	10 - 118	percent	J/None	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Qualified Results

No results associated with this sample delivery group required qualification.

Results with Modified Qualifiers

No qualifiers associated with this sample delivery group were modified manually.

Reason Code Definitions

Code	Definition
I	Surrogate recovery outside project limits.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
U	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: SW8260C (Volatile Organic Compounds by GC/MS)

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?	•			Samples AB-1-MAY24 and EB-1-MAY24 were collected by mistake and were cancelled. by Parsons.
Were there discrepancies between the COC and the sample labels?	•			The following discrepancies were noted: 1. The analysis was not included on the container label for any of the samples. 2. The sample ID on the COC was missing the leading "0". 3. Corrections made to the sample labels were not initialed and dated by field team. An email was sent to the laboratory by Parsons instructing them of the analysis to be performed for all samples and the correct sample ID.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		The LOQ value for the following analytes are greater than the Project Quantitation Limit Goal: 1,4-Dichlorobenzene, Benzene, Ethylbenzene, Trichloroethene, and Vinyl Chloride
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?		•		Both trip blank samples were included in SDG 24F004 and had detections of toluene below the LOQ. All the field samples were non-detect for toluene; therefore, data quality was not impacted and results were not qualified.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not planned to be collected for this sampling event.
Were equipment blanks analyzed at the proper frequency and in control?	•			One equipment blank and one source blank included in SDG 24F019 were associated with the samples in this SDG. Both blanks were non-detect for all target analytes
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?		•		A project MS/MSD was not collected with the samples in this SDG and the laboratory did not select a project sample form this SDG for MS/MSD analysis.
Were MS/MSD recoveries within project acceptance limits?			•	

Review Questions

Method: SW8260C (Volatile Organic Compounds by GC/MS)

Review Questions	Yes	No	NA	Comment
Was the MS/MSD RPD within project acceptance limits?			•	
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?		•		Surrogate 1,2-dichloroethane-d4 recovered high and outside criteria in sample T1AMF-MW055-MAY24. The results were non-detect for all target analytes; therefore, data quality was not impacted and results were not qualified.
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	Field duplicates were collected and analyzed at the proper frequency required by the project but no field duplicates were included in this SDG.
Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?	•			
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Were CCVs run at the required frequency and within project acceptance criteria?	•			
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		

Module 1: Analysis by GC/MS

Lab/SDG: **EMAX / 24F004**

RECALCULATION TYPE	TAB Reference
Tune: Ion Abundance	TUNE
Tailing Factor	not applicable for 8260
Calibration RF	ICAL RF
Calibration RRT	Rel RT
ICV/CCV %D	ICAL RF
Sample Conc. Raw Values	ICAL RF
Sample Conc. Linear Regression	not applicable
Quadratic Regression	not applicable
LCS % Recovery	ICAL RF
Surrogate % Recovery	ICAL RF
MS/MSD % Recovery	ICAL RF
MS/MSD RPD	ICAL RF
Sample Amounts	ICAL RF
Sample Conc. by Volume (Aqueous Only)	ICAL RF
Sample Conc. by Weight (Non-aqueous only)	not applicable

6.1 SAMPLES AND QC	COMMENT
Sample recalculations should include the raw instrument result, re-quantified from the instrument response against the calibration function, and the final reported sample result, including any dilution, preparation factor, or percent moisture (if applicable). The equations in Appendix B can be used to calculate a sample result from the corresponding reported calibration or regression function, as appropriate	Provided in ICAL RF tab
Verify that one or more of the laboratory's reporting limits (such as limit of quantitation) are calculated correctly for the non-detects and reported accordingly. If a detection limit study was identified by the QAPP, recalculate one or more analyte detection limits.	Provided in LOQ Recalc tab
Re-quantitate **all detected target analytes in the 10% sample data chosen**. For some samples, all results may be non-detects, therefore recalculation would not be necessary. Verify that sample-specific results have been adjusted correctly to reflect percent solids, original sample mass/volume, and any applicable dilutions.	Provided in ICAL RF tab

Module 1: Analysis by GC/MS

Lab/SDG: EMAX / 24F004

Re-quantitate **all detects found in the field QC blanks** (such as trip blanks, field blanks, or equipment blanks). Field QC sample duplicate recalculations should include re-quantification of the same detected analyte sample/duplicate pair and verification of the percent difference (%D), or relative percent difference (RPD), as reported	No field blanks were included in this SDG
6.2 Method QC	
Re-quantification of batch QC sample results should use raw instrument response in tandem with the reported calibration factor, response factor, or slope; the preparation information; and percent moisture for solid samples to recreate the reported result.	Provided in ICAL RF tab
6.2.1 Surrogate Spikes	
Verify the concentrations of surrogates from the raw data. Verify that the surrogate result and percent recovery were calculated and reported correctly by re-calculating all surrogates in the 10% of chosen sample data and method QC that were originally selected.	Provided in ICAL RF tab
6.2.2 LCS/LCSD	
To check that the spike percent recovery was calculated and reported correctly, using the equation in Appendix B, re-quantitate and then recalculate all contaminants of concern as outlined in the UFP-QAPP Worksheet #12 or #15. Use a random 10% of the analytes in the LCS/LCSD if contaminants of concern (target analytes) have not been specifically identified. Recalculate RPDs (if applicable) from LCS/LCSD pairs that would result in the qualification of a sample.	Provided in ICAL RF tab
6.2.3 MS/MSD	
Re-quantitate 10% of the target analytes as listed in the UFP-QAPP Worksheet #12 or #15 for both the MS and the MSD. Use a random 10% of the analytes in the MS and MSD if contaminates of concern have not been identified. The RPDs of the recalculated MS/MSD pairs should be calculated from the MS/MSD concentrations, not from the recoveries.	Provided in ICAL RF tab
6.2.4 Method Blanks	
Re-quantitate one or more detects found in the method blank (if applicable) from the reported average RF (or higher order regression, if used) per each batch of samples.	No method blank detections were found; no recalcs needed
6.3 Insturment QC	
6.3.1 Tune Check	
Verify by re-calculating from the quantitation reports, that the mass assignment is correct and that the mass listing is normalized to the specified m/z for at least 10% of the abundance ratios in every tune. Verify by recalculation that the reported DDT degradation and tailing factor are accurate for SVOC performance checks.	Provided in TUNE tab

Module 1: Analysis by GC/MS

Lab/SDG: **EMAX / 24F004**

6.3.2 Initial (Response Factors and Regressions) and Continuing Calibration Verifications

Initial calibration (ICAL) recalculations should use the raw instrument response for the target analytes and associated internal standards to recreate the calibration curve from the individual calibration standards. If multiple types of calibration curves are employed in an analytical suite, then one analyte per curve type should be recalculated.	Provided in ICAL RF tab
Re-quantitate and recalculate the individual and average RFs, %RSDs, and regression function (if used) and r values reported for at least 10% of the target analytes per each internal standard, (preferably analytes of concern which were identified in the QAPP), per initial calibration curve type.	Provided in ICAL RF tab
Re-quantitate and recalculate the Initial and Continuing Calibration Verification RF result and %D for at least 10% of the target analytes, proportionally per each internal standard and proportionally selecting analytes based on each calibration curve type.	Provided in ICAL RF tab
The laboratory may employ a linear or weighted linear least squares regression. The low standard should be recalculated using the calibration curve and evaluated. RFs should not be evaluated for analytes with linear or higher order regression curves. If the ICAL included refitting of the data back to the model (RSE), the recalculate 10% of the target analytes for the RSE in each ICAL.	Linear regression was not used for any target analytes in this SDG

6.3.3 Internal Standards

Verify all internal standards reported from the raw data for at least one sample per batch of samples, and verify internal standard areas for samples that were qualified due to out-of-control internal standard areas.	No calculations were performed; internal stds were verified as required. Recalculations of all analyte concentrations further confirm IS quantitation.

6.4 Standards Traceability

Check that the stock standards were diluted properly into working standards by recalculating the dilutions of one or more **calibration standards**. Recalculate one or more **surrogate** dilutions. Recalculate one or more method QC sample dilutions (such as **LCS or MS/MSD**) from the stock to the working standard.	Provided in Standards tab

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level and 10% of the data validated at a Stage 4. The following samples were validated at a Stage 4: T1AMF·MW051_MAY24 and T1AMF·MW035_MAY24. Validation was performed following the guidelines outlined in the project-specific UFP QAPP, DoD General Data Validation Guidelines, Rev 1 (Nov 2019) and Data Validation Guidelines Module 1: Data Validation Procedure for Organic Analysis by GC/MS. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Titan 1A Missile Facility, Lincoln CA and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Parsons Corporation, Austin, TX; analyses were performed by EMAX Laboratories, Inc., Torrance, CA and were reported under sample delivery group (SDG) 24F019. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 154 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
SW8260C	Sample T1AMF-MW058_MAY24 had a brown sediment at the bottom of the sample containers.

Beth Driskill

July 16, 2024

Reviewed by Beth Driskill, Senior Scientist, Parsons Corporation

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method SW8260C, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
TB-3_MAY24 (TB) 24F019-13	Toluene	0.330	< 0.1	< 1	ug/l	U/None*	T	
TB-4_JUN24 (TB) 24F019-14N	Toluene	0.300	< 0.1	< 1	ug/l	U/None*	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260C, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
24VOE2F05C (BD) 24VOE2F05C	1,4-Dichlorobenzene	120	79 - 118	79 - 118	percent	J/None	C	
24VOE2F06C (BD) 24VOE2F06C	1,4-Dichlorobenzene	120	79 - 118	79 - 118	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Qualified Results

No results associated with this sample delivery group required qualification.

Results with Modified Qualifiers

No qualifiers associated with this sample delivery group were modified manually.

Reason Code Definitions

Code	Definition
C	LCS Recovery
T	Trip Blank
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
U	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: SW8260C (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		
Were there discrepancies between the COC and the sample labels?	•			The following discrepancies were noted: 1. The analysis was not included on the container label for any of the samples. 2. Sample ID and collection time discrepancies between the COC and label. The lab was instructed to follow the sample ID and collection time documented on the COC.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		The LOQ value for the following analytes are greater than the Project Quantitation Limit Goal: 1,4-Dichlorobenzene, Benzene, Ethylbenzene, Trichloroethene, and Vinyl Chloride.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?		•		Both trip blank samples had detections of toluene below the LOQ. All the field samples were non-detect for toluene; therefore, data quality was not impacted and results were not qualified.
Were field blanks analyzed at the proper frequency and in control?			•	Field blanks were not planned to be collected for this sampling event
Were equipment blanks analyzed at the proper frequency and in control?	•			One equipment blank and one source blank were associated with the samples in this SDG. Both blanks were non-detect for all target analytes.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		The recovery for 1,4-dichlorobenzene recovered high and outside criteria in the LCSDs included in batches V0E2F05 and V0E2F06. The associated samples were non-detect for 1,4-dichlorobenzene; therefore, data quality was not impacted and results were not qualified.
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			Two project samples were requested for MS/MSD analysis on the COC.
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	

Review Questions

Method: SW8260C (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?	•			
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Were CCVs run at the required frequency and within project acceptance criteria?	•			
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		

Module 1: Analysis by GC/MS

Lab/SDG: **EMAX / 24F019**

MS/MSD RPD	ICAL RF
Sample Amounts	ICAL RF
Sample Conc. by Volume (Aqueous Only)	ICAL RF
Sample Conc. by Weight (Non-aqueous only)	not applicable

6.1 SAMPLES AND QC	COMMENT
Sample recalculations should include the raw instrument result, re-quantified from the instrument response against the calibration function, and the final reported sample result, including any dilution, preparation factor, or percent moisture (if applicable). The equations in Appendix B can be used to calculate a sample result from the corresponding reported calibration or regression function, as appropriate	Provided in ICAL RF tab
Verify that one or more of the laboratory's reporting limits (such as limit of quantitation) are calculated correctly for the non-detects and reported accordingly. If a detection limit study was identified by the QAPP, recalculate one or more analyte detection limits.	Provided in LOQ Recalc tab
Re-quantitate **all detected target analytes in the 10% sample data chosen**. For some samples, all results may be non-detects, therefore recalculation would not be necessary. Verify that sample-specific results have been adjusted correctly to reflect percent solids, original sample mass/volume, and any applicable dilutions.	Provided in ICAL RF tab

Module 1: Analysis by GC/MS
Lab/SDG: EMAX / 24F019

Re-quantitate **all detects found in the field QC blanks** (such as trip blanks, field blanks, or equipment blanks). Field QC sample duplicate recalculations should include re-quantification of the same detected analyte sample/duplicate pair and verification of the percent difference (%D), or relative percent difference (RPD), as reported	Provided in Blank Detections tab
6.2 Method QC	
Re-quantification of batch QC sample results should use raw instrument response in tandem with the reported calibration factor, response factor, or slope; the preparation information; and percent moisture for solid samples to recreate the reported result.	Provided in ICAL RF tab
6.2.1 Surrogate Spikes	
Verify the concentrations of surrogates from the raw data. Verify that the surrogate result and percent recovery were calculated and reported correctly by re-calculating all surrogates in the 10% of chosen sample data and method QC that were originally selected.	Provided in ICAL RF tab
6.2.2 LCS/LCSD	
To check that the spike percent recovery was calculated and reported correctly, using the equation in Appendix B, re-quantitate and then recalculate all contaminants of concern as outlined in the UFP-QAPP Worksheet #12 or #15. Use a random 10% of the analytes in the LCS/LCSD if contaminants of concern (target analytes) have not been specifically identified. Recalculate RPDs (if applicable) from LCS/LCSD pairs that would result in the qualification of a sample.	Provided in ICAL RF tab
6.2.3 MS/MSD	
Re-quantitate 10% of the target analytes as listed in the UFP-QAPP Worksheet #12 or #15 for both the MS and the MSD. Use a random 10% of the analytes in the MS and MSD if contaminates of concern have not been identified. The RPDs of the recalculated MS/MSD pairs should be calculated from the MS/MSD concentrations, not from the recoveries.	Provided in ICAL RF tab
6.2.4 Method Blanks	
Re-quantitate one or more detects found in the method blank (if applicable) from the reported average RF (or higher order regression, if used) per each batch of samples.	No method blank detections were found; no recalcs needed
6.3 Insturment QC	
6.3.1 Tune Check	
Verify by re-calculating from the quantitation reports, that the mass assignment is correct and that the mass listing is normalized to the specified m/z for at least 10% of the abundance ratios in every tune. Verify by recalculation that the reported DDT degradation and tailing factor are accurate for SVOC performance checks.	Provided in TUNE tab

Module 1: Analysis by GC/MS

Lab/SDG: **EMAX / 24F019**

6.3.2 Initial (Response Factors and Regressions) and Continuing Calibration Verifications

Initial calibration (ICAL) recalculations should use the raw instrument response for the target analytes and associated internal standards to recreate the calibration curve from the individual calibration standards. If multiple types of calibration curves are employed in an analytical suite, then one analyte per curve type should be recalculated.	Provided in ICAL RF tab
Re-quantitate and recalculate the individual and average RFs, %RSDs, and regression function (if used) and r values reported for at least 10% of the target analytes per each internal standard, (preferably analytes of concern which were identified in the QAPP), per initial calibration curve type.	Provided in ICAL RF tab
Re-quantitate and recalculate the Initial and Continuing Calibration Verification RF result and %D for at least 10% of the target analytes, proportionally per each internal standard and proportionally selecting analytes based on each calibration curve type.	Provided in ICAL RF tab
The laboratory may employ a linear or weighted linear least squares regression. The low standard should be recalculated using the calibration curve and evaluated. RFs should not be evaluated for analytes with linear or higher order regression curves. If the ICAL included refitting of the data back to the model (RSE), the recalculate 10% of the target analytes for the RSE in each ICAL.	Linear regression was not used for any target analytes in this SDG

6.3.3 Internal Standards

Verify all internal standards reported from the raw data for at least one sample per batch of samples, and verify internal standard areas for samples that were qualified due to out-of-control internal standard areas.	No calculations were performed; internal stds were verified as required. Recalculations of all analyte concentrations further confirm IS quantitation.

6.4 Standards Traceability

Check that the stock standards were diluted properly into working standards by recalculating the dilutions of one or more **calibration standards**. Recalculate one or more **surrogate** dilutions. Recalculate one or more method QC sample dilutions (such as **LCS or MS/MSD**) from the stock to the working standard.	Provided in Standards tab

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S4VEM data validation level. The following samples were validated at a Stage 4: T1AMF-SV001_May24, T1AMF-SV033_May24, T1AMF-SV024_May24, T1AMF-SV026_May24, and T1AMF-SV020_May24. Validation was performed following the guidelines outlined in the project-specific UFP QAPP, DoD General Data Validation Guidelines, Rev 1 (Nov 2019) and Data Validation Guidelines Module 1: Data Validation Procedure for Organic Analysis by GC/MS. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Titan 1A Missile Facility, Lincoln CA and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Parsons Corporation, Austin, TX; analyses were performed by Eurofins Air Toxics, Inc., Folsom, CA and were reported under sample delivery group (SDG) 2406133. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 231 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
TO15	Sample T1AMF-SV021_May24 was cancelled on 6/13/24 per Parson's request because the sample was measured at full vacuum (29.8”Hg) indicating that no sample volume was collected.

Beth Driskill

July 10, 2024

Reviewed by Beth Driskill, Senior Scientist, Parsons Corporation

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

No Outliers were associated with this sample delivery group.

Qualified Results

No results associated with this sample delivery group required qualification.

Results with Modified Qualifiers

No qualifiers associated with this sample delivery group were modified manually.

Reason Code Definitions

Code	Definition
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.

U	Undetected: The analyte was analyzed for, but not detected.
U	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias	
-	The result may be biased low
+	The result may be biased high
Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result	

Data Validation Report for 2406133

Review Questions

Method: TO15 (Determination of Volatile Organic Compounds in Air Collected in Specially-Prepared Canisters and Analyzed by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		
Were there discrepancies between the COC and the sample labels?	•			The COC information for sample T1AMF-SV019_May24 did not match the information on the canister with regard to canister barcode. The sample labeled 1L4781 on the COC is labeled as 1L4761 on the canister. Parsons project team was notified of the discrepancy and the information on the canister was used to process and report the sample.
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?			•	Preservation for summa canisters is not applicable.
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			Sample T1AMF-SV020_May24 was received with significant vacuum remaining in the canister. The residual canister vacuum resulted in elevated reporting limits.
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		The laboratory LOQ exceeded the PQL goal for the following analytes in one or more samples; 1,4-dichlorobenzene, benzene, TCE, vinyl chloride, and ethylbenzene.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	MS/MSD analysis is not applicable for method TO15
Were MS/MSD recoveries within project acceptance limits?			•	MS/MSD analysis is not applicable for method TO15.
Was the MS/MSD RPD within project acceptance limits?			•	MS/MSD analysis is not applicable for method TO15
Were Post Spike (PS) recoveries within project acceptance limits?			•	Post Spike is not applicable for method TO-15.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•			

Review Questions

Method: TO15 (Determination of Volatile Organic Compounds in Air Collected in Specially-Prepared Canisters and Analyzed by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Was the Calibration within project acceptance criteria?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Was instrument tuning completed every 24 hours during sample analysis?	•			
Were CCVs run at the required frequency and within project acceptance criteria?	•			
Were ICB/CCBs run at the required frequency?			•	CCB/ICBs are not applicable for method TO15.
Were target analytes in the ICBs/CCBs non-detect?			•	CCB/ICBs are not applicable for method TO15.
Was a Low Level Calibration Check Verification (LLCCV) analyzed prior to sample and within acceptance criteria?			•	LLCCVs are not applicable for method TO15.
Were instrument run logs present and filled out appropriately?	•			
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were certificates of standard traceability provided and documentation of standard solution preparation?	•			
Were recalculation of QC Elements and Sample Results performed?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were certificates of standard traceability and documentation of standard solution preparation provided?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		
Were Relative Retention Times (RRTs) within ± 0.06 RRT units (may be updated based on daily CCV)?	•			
Were chromatograms checked for peak integration? (10% of automated integration and 100% of manual integrations)	•			
Were chromatograms checked for correct baseline/peak integration and possible interferences?	•			
Were qualitative ion mass present?	•			

Module 1: Analysis by GC/MS

Lab/SDG: **Eurofins Air Toxics / 2406133**

Sample Conc. Linear Regression	not applicable
Quadratic Regression	not applicable
LCS % Recovery	ICAL RF
Surrogate % Recovery	ICAL RF
MS/MSD % Recovery	ICAL RF
MS/MSD RPD	ICAL RF
Sample Amounts	ICAL RF
Sample Conc. by Volume (Aqueous Only)	ICAL RF
Sample Conc. by Weight (Non-aqueous only)	not applicable

6.1 SAMPLES AND QC	COMMENT
Sample recalculations should include the raw instrument result, re-quantified from the instrument response against the calibration function, and the final reported sample result, including any dilution, preparation factor, or percent moisture (if applicable). The equations in Appendix B can be used to calculate a sample result from the corresponding reported calibration or regression function, as appropriate	Provided in ICAL RF tab
Verify that one or more of the laboratory's reporting limits (such as limit of quantitation) are calculated correctly for the non-detects and reported accordingly. If a detection limit study was identified by the QAPP, recalculate one or more analyte detection limits.	Provided in LOQ Recalc tab
Re-quantitate **all detected target analytes in the 10% sample data chosen**. For some samples, all results may be non-detects, therefore recalculation would not be necessary. Verify that sample-specific results have been adjusted correctly to reflect percent solids, original sample mass/volume, and any applicable dilutions.	Provided in ICAL RF tab

Module 1: Analysis by GC/MS

Lab/SDG: Eurofins Air Toxics / 2406133

Re-quantitate **all detects found in the field QC blanks** (such as trip blanks, field blanks, or equipment blanks). Field QC sample duplicate recalculations should include re-quantification of the same detected analyte sample/duplicate pair and verification of the percent difference (%D), or relative percent difference (RPD), as reported	No field QC included in SDG
6.2 Method QC	
Re-quantification of batch QC sample results should use raw instrument response in tandem with the reported calibration factor, response factor, or slope; the preparation information; and percent moisture for solid samples to recreate the reported result.	Provided in ICAL RF tab
6.2.1 Surrogate Spikes	
Verify the concentrations of surrogates from the raw data. Verify that the surrogate result and percent recovery were calculated and reported correctly by re-calculating all surrogates in the 10% of chosen sample data and method QC that were originally selected.	Provided in ICAL RF tab
6.2.2 LCS/LCSD	
To check that the spike percent recovery was calculated and reported correctly, using the equation in Appendix B, re-quantitate and then recalculate all contaminants of concern as outlined in the UFP-QAPP Worksheet #12 or #15. Use a random 10% of the analytes in the LCS/LCSD if contaminants of concern (target analytes) have not been specifically identified. Recalculate RPDs (if applicable) from LCS/LCSD pairs that would result in the qualification of a sample.	Provided in ICAL RF tab
6.2.3 MS/MSD	
Re-quantitate 10% of the target analytes as listed in the UFP-QAPP Worksheet #12 or #15 for both the MS and the MSD. Use a random 10% of the analytes in the MS and MSD if contaminates of concern have not been identified. The RPDs of the recalculated MS/MSD pairs should be calculated from the MS/MSD concentrations, not from the recoveries.	Provided in ICAL RF tab
6.2.4 Method Blanks	
Re-quantitate one or more detects found in the method blank (if applicable) from the reported average RF (or higher order regression, if used) per each batch of samples.	No method blank detections were found; no recalcs needed

Module 1: Analysis by GC/MS

Lab/SDG: **Eurofins Air Toxics / 2406133**

6.3 Insturment QC

6.3.1 Tune Check

Verify by re-calculating from the quantitation reports, that the mass assignment is correct and that the mass listing is normalized to the specified m/z for at least 10% of the abundance ratios in every tune. Verify by recalculation that the reported DDT degradation and tailing factor are accurate for SVOC performance checks.	Provided in TUNE tab

6.3.2 Initial (Response Factors and Regressions) and Continuing Calibration Verifications

Initial calibration (ICAL) recalculations should use the raw instrument response for the target analytes and associated internal standards to recreate the calibration curve from the individual calibration standards. If multiple types of calibration curves are employed in an analytical suite, then one analyte per curve type should be recalculated.	Provided in ICAL RF tab
Re-quantitate and recalculate the individual and average RFs, %RSDs, and regression function (if used) and r values reported for at least 10% of the target analytes per each internal standard, (preferably analytes of concern which were identified in the QAPP), per initial calibration curve type.	Provided in ICAL RF tab
Re-quantitate and recalculate the Initial and Continuing Calibration Verification RF result and %D for at least 10% of the target analytes, proportionally per each internal standard and proportionally selecting analytes based on each calibration curve type.	Provided in ICAL RF tab
The laboratory may employ a linear or weighted linear least squares regression. The low standard should be recalculated using the calibration curve and evaluated. RFs should not be evaluated for analytes with linear or higher order regression curves. If the ICAL included refitting of the data back to the model (RSE), the recalculate 10% of the target analytes for the RSE in each ICAL.	Linear regression was not used for any target analytes in this SDG

6.3.3 Internal Standards

Verify all internal standards reported from the raw data for at least one sample per batch of samples, and verify internal standard areas for samples that were qualified due to out-of-control internal standard areas.	No calculations were performed; internal stds were verified as required. Recalculations of all analyte concentrations further confirm IS quantitation.

6.4 Standards Traceability

Check that the stock standards were diluted properly into working standards by recalculating the dilutions of one or more calibration standards. Recalculate one or more surrogate dilutions. Recalculate one or more method QC sample dilutions (such as LCS or MS/MSD) from the stock to the working standard.	Provided in Standards tab

Module 1: Analysis by GC/MS
Lab/SDG: Eurofins Air Toxics / 2406133

Internal Standard Initial Calibration and Calculation Worksheet

Lab: Eurofins Air Toxics
Method: TO15
SDG: 2406264
Instrument: MSD3
Curve Date: 4/23/2024
Compound: Ethylbenzene
Internal Standard: Chlorobenzene-d5
CALIBRATION TYPE USED: RF

red text = manually input values from lab report

The following samples were validated at a Stage 4:
T1AMF-SV001_May24
T1AMF-SV033_May24
T1AMF-SV024_May24
T1AMF-SV026_May24

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level and 10% of the data validated at a Stage 4. Samples T1AMF-SV027_JUN24 and T1AMF-SV028_JUN24 were validated at a Stage 4. Validation was performed following the guidelines outlined in the project-specific UFP QAPP, DoD General Data Validation Guidelines, Rev 1 (Nov 2019) and Data Validation Guidelines Module 1: Data Validation Procedure for Organic Analysis by GC/MS. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Titan 1A Missile Facility, Lincoln CA and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Parsons Corporation, Austin, TX; analyses were performed by Eurofins Air Toxics, Inc., Folsom, CA and were reported under sample delivery group (SDG) 2406264R2. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 154 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

TO15	No additional comments; see Checklist for detail.

Beth Driskill

July 14, 2024

Reviewed by Beth Driskill, Senior Scientist, Parsons Corporation

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

No Outliers were associated with this sample delivery group.

Qualified Results

No results associated with this sample delivery group required qualification.

Results with Modified Qualifiers

No qualifiers associated with this sample delivery group were modified manually.

Reason Code Definitions

Code	Definition
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.

U	Undetected: The analyte was analyzed for, but not detected.
U	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias	
-	The result may be biased low
+	The result may be biased high
Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result	

Review Questions

Method: TO15 (Determination of Volatile Organic Compounds in Air Collected in Specially-Prepared Canisters and Analyzed by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?	•			The sample ID: T1AMF-SV009B_JUN24 was incorrectly documented on the COC. Parsons requested that the lab revise the sample ID accordingly.
Were there discrepancies between the COC and the sample labels?		•		
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?			•	Preservation for summa canisters is not applicable.
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			Samples T1AMF-SV027_JUN24 and T1AMF-SV029_JUN24 were received with significant vacuum remaining in the canister. The residual canister vacuum resulted in elevated reporting limits.
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		The laboratory LOQ exceeded the PQL goal for the following analytes in one or more samples: 1,4-dichlorobenzene, TCE, and vinyl chloride.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?				
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	MS/MSD analysis is not applicable for method TO15
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were Post Spike (PS) recoveries within project acceptance limits?			•	Post Spike is not applicable for method TO-15.
If ISM was used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			

Review Questions

Method: TO15 (Determination of Volatile Organic Compounds in Air Collected in Specially-Prepared Canisters and Analyzed by GC/MS)				
Review Questions	Yes	No	NA	Comment
Was the Calibration within project acceptance criteria?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Was instrument tuning completed every 24 hours during sample analysis?	•			
Were CCVs run at the required frequency and within project acceptance criteria?	•			
Were ICB/CCBs run at the required frequency?			•	ICB/CCB are not applicable for method TO-15.
Were target analytes in the ICBs/CCBs non-detect?			•	
Was a Low Level Calibration Check Verification (LLCCV) analyzed prior to sample and within acceptance criteria?			•	LLCCVs are not applicable for method TO15
Were internal standard recoveries within project acceptance limits?	•			
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were instrument run logs present and filled out appropriately?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for exclusion in the data validation process?		•		

Module 1: Analysis by GC/MS

Lab/SDG: **Eurofins Air Toxics / 2406264**

RECALCULATION TYPE	TAB Reference
Tune: Ion Abundance	TUNE
Tailing Factor	not applicable for TO15
Calibration RF	ICAL RF
Calibration RRT	Rel RT
ICV/CCV %D	ICAL RF
Sample Conc. Raw Values	ICAL RF
Sample Conc. Linear Regression	not applicable
Quadratic Regression	not applicable
LCS % Recovery	ICAL RF
Surrogate % Recovery	ICAL RF
MS/MSD % Recovery	ICAL RF
MS/MSD RPD	ICAL RF
Sample Amounts	ICAL RF
Sample Conc. by Volume (Aqueous Only)	ICAL RF
Sample Conc. by Weight (Non-aqueous only)	not applicable

6.1 SAMPLES AND QC	COMMENT
Sample recalculations should include the raw instrument result, re-quantified from the instrument response against the calibration function, and the final reported sample result, including any dilution, preparation factor, or percent moisture (if applicable). The equations in Appendix B can be used to calculate a sample result from the corresponding reported calibration or regression function, as appropriate	Provided in ICAL RF tab
Verify that one or more of the laboratory's reporting limits (such as limit of quantitation) are calculated correctly for the non-detects and reported accordingly. If a detection limit study was identified by the QAPP, recalculate one or more analyte detection limits.	Provided in LOQ Recalc tab
Re-quantitate **all detected target analytes in the 10% sample data chosen**. For some samples, all results may be non-detects, therefore recalculation would not be necessary. Verify that sample-specific results have been adjusted correctly to reflect percent solids, original sample mass/volume, and any applicable dilutions.	Provided in ICAL RF tab

Module 1: Analysis by GC/MS

Lab/SDG: Eurofins Air Toxics / 2406264

Re-quantitate **all detects found in the field QC blanks** (such as trip blanks, field blanks, or equipment blanks). Field QC sample duplicate recalculations should include re-quantification of the same detected analyte sample/duplicate pair and verification of the percent difference (%D), or relative percent difference (RPD), as reported	No field QC included in SDG
6.2 Method QC	
Re-quantification of batch QC sample results should use raw instrument response in tandem with the reported calibration factor, response factor, or slope; the preparation information; and percent moisture for solid samples to recreate the reported result.	Provided in ICAL RF tab
6.2.1 Surrogate Spikes	
Verify the concentrations of surrogates from the raw data. Verify that the surrogate result and percent recovery were calculated and reported correctly by re-calculating all surrogates in the 10% of chosen sample data and method QC that were originally selected.	Provided in ICAL RF tab
6.2.2 LCS/LCSD	
To check that the spike percent recovery was calculated and reported correctly, using the equation in Appendix B, re-quantitate and then recalculate all contaminants of concern as outlined in the UFP-QAPP Worksheet #12 or #15. Use a random 10% of the analytes in the LCS/LCSD if contaminants of concern (target analytes) have not been specifically identified. Recalculate RPDs (if applicable) from LCS/LCSD pairs that would result in the qualification of a sample.	Provided in ICAL RF tab
6.2.3 MS/MSD	
Re-quantitate 10% of the target analytes as listed in the UFP-QAPP Worksheet #12 or #15 for both the MS and the MSD. Use a random 10% of the analytes in the MS and MSD if contaminates of concern have not been identified. The RPDs of the recalculated MS/MSD pairs should be calculated from the MS/MSD concentrations, not from the recoveries.	Provided in ICAL RF tab
6.2.4 Method Blanks	
Re-quantitate one or more detects found in the method blank (if applicable) from the reported average RF (or higher order regression, if used) per each batch of samples.	No method blank detections were found; no recalcs needed
6.3 Insturment QC	
6.3.1 Tune Check	
Verify by re-calculating from the quantitation reports, that the mass assignment is correct and that the mass listing is normalized to the specified m/z for at least 10% of the abundance ratios in every tune. Verify by recalculation that the reported DDT degradation and tailing factor are accurate for SVOC performance checks.	Provided in TUNE tab

Module 1: Analysis by GC/MS

Lab/SDG: Eurofins Air Toxics / 2406264

6.3.2 Initial (Response Factors and Regressions) and Continuing Calibration Verifications

Initial calibration (ICAL) recalculations should use the raw instrument response for the target analytes and associated internal standards to recreate the calibration curve from the individual calibration standards. If multiple types of calibration curves are employed in an analytical suite, then one analyte per curve type should be recalculated.	Provided in ICAL RF tab
Re-quantitate and recalculate the individual and average RFs, %RSDs, and regression function (if used) and r values reported for at least 10% of the target analytes per each internal standard, (preferably analytes of concern which were identified in the QAPP), per initial calibration curve type.	Provided in ICAL RF tab
Re-quantitate and recalculate the Initial and Continuing Calibration Verification RF result and %D for at least 10% of the target analytes, proportionally per each internal standard and proportionally selecting analytes based on each calibration curve type.	Provided in ICAL RF tab
The laboratory may employ a linear or weighted linear least squares regression. The low standard should be recalculated using the calibration curve and evaluated. RFs should not be evaluated for analytes with linear or higher order regression curves. If the ICAL included refitting of the data back to the model (RSE), the recalculate 10% of the target analytes for the RSE in each ICAL.	Linear regression was not used for any target analytes in this SDG

6.3.3 Internal Standards

Verify all internal standards reported from the raw data for at least one sample per batch of samples, and verify internal standard areas for samples that were qualified due to out-of-control internal standard areas.	No calculations were performed; internal stds were verified as required. Recalculations of all analyte concentrations further confirm IS quantitation.

6.4 Standards Traceability

Check that the stock standards were diluted properly into working standards by recalculating the dilutions of one or more calibration standards. Recalculate one or more surrogate dilutions. Recalculate one or more method QC sample dilutions (such as LCS or MS/MSD) from the stock to the working standard.	Provided in Standards tab

DATA VALIDATION SUMMARY REPORT

for Investigation Derived Waste from

FORMER TITAN 1-A MISSLE FACILITY

LINCOLN, CALIFORNIA

Data Review by: Beth Driskill

Project Manager: Carrie Ross

Report Date: July 30, 2024

Parsons - Austin

INTRODUCTION

The following data verification summary report covers one (1) solid Investigation Derived Waste (IDW) sample and one (1) aqueous IDW sample collected from the Former Titan 1-A Missile Facility in Lincoln, California on June 6, 2024. The samples were sent to EMAX laboratories and logged into sample delivery group (SDG) 24F034.

EVALUATION CRITERIA

The data packages including IDW were reviewed and verified at Stage 1 following the guidelines outlined in the project specific Uniform Federal Policy - Quality Assurance Project Plan (project QAPP) and DoD General Data Validation Guidelines, November 2019. Information reviewed in the data packages included field sample IDs, target analytes, sample conditions upon laboratory receipt, sample preservation, holding times, concentrations for limits of detection and quantitation, reported units, case narratives; sample receipt forms, and chain-of-custody (COC) forms.

The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the associated analytical method, DoD QSM and QAPP were met.

SAMPLE RECEIPT

The samples were collected by Parsons and were shipped to EMAX laboratories located in Torrance, California. The samples were received by the laboratory within the acceptable temperature range. All samples were received in good condition. Sufficient volume was received to complete all requested parameters. Samples were received in the appropriate containers and correctly preserved, in accordance with the project QAPP. However, the COC did require revisions and discrepancies were noted by the laboratory as follows:

- TCLP analysis for VOCs and metals was marked on the COC by mistake for the aqueous analysis. The COC was revised to remove that analysis for the aqueous sample.
- The COC was revised to note the soil sample for VOCs and metals analysis was on hold pending results for the totals analysis.

- The laboratory noted that the analyses were not indicated on the container label.
- The laboratory noted that the sample label was adhered to the VOA vial for the soil samples submitted for VOC analysis.
- The laboratory noted that it appeared the soil absorbed some of the sodium bisulfate preservative for the sample submitted for VOC analysis. The laboratory did not indicate in the extraction or analytical logs that there was an issue analyzing the sample.

None of the revisions or discrepancies noted above impacted data quality or usability.

SAMPLE ANALYSIS

All samples were prepared and analyzed following the procedures outlined in the project QAPP and the Department of Defense (DoD) Quality Systems Manual (QSM) Version 5.4. The following tables detail the sample IDs submitted to each laboratory and the parameters requested for each sample.

EMAX SAMPLE IDS AND REQUESTED PARAMETERS

SAMPLE ID	LAB ID	Matrix	VOCs	Metals	Mercury	COMMENTS
IDW-Water_JUN24	24F034-01	IDW Water	X	X	X	
IDW-Soil_JUN24	24F034--02	IDW Solid	X	X	X	STLC and TCLP analysis for VOCs and metals put on hold

The following table details the preparation and analytical methods, and reported units of measure, for each parameter requested.

EXTRACTION, ANALYTICAL, AND REPORTING DETAILS

Parameter	Matrix	Prep Method	Analytical Method	Units
VOCs (Total)	Solid	SW5035A	SW8260C	µg/Kg
VOCs (Total)	Aqueous	SW5030C	SW8260C	µg/L
Metals (Total)	Solid	SW3050B	SW6010C	mg/Kg
Metals (Total)	Aqueous	SW3010A	SW6010C	mg/L
Mercury (Total)	Solid	SW7471B	SW7471B	mg/Kg
Mercury (Total)	Aqueous	SW7470A	SW7470A	µg/L

GENERAL

The samples in this SDG were analyzed following the COC and the analytical procedures described in the DoD QSM and project QAPP. All samples were extracted and analyzed in accordance with the standard analytical methods requested, as documented above.

HOLDING TIMES

All samples were prepared and analyzed within the holding time required by the methods.

BATCH QC

A cursory review of relevant batch QC was reviewed to ensure data quality was sufficient to support disposal decisions. Batch QC reviewed included method blanks, laboratory control spikes, and surrogates (as applicable). The laboratory case narratives were also reviewed for documented non-compliant QC. Some minor exceedances were found and/or documented in the case narrative, but no exceedances were significant enough to impact data quality or usability and no data qualifiers were necessary.

SENSITIVITY

The LOD and LOQ values reported for the samples were compared to those listed in the project QAPP to ensure that sensitivity requirements were met. Reported sample LOD and LOQ values were adjusted based on dilution and/or initial/final volumes; therefore, in some instances the lab limits reported did not match those in the QAPP.

The LOD and LOQ values for all analytes in this data set meet sensitivity requirements and are below the project screening limits (PSL) included in Appendix C, Worksheet 15 of the project QAPP.

COMPLETENESS

Completeness was evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data. The laboratories analyzed the samples

for all parameters requested and no data was rejected for this data set. Therefore, the completeness for the IDW samples referenced in this report is 100%.

COMPARABILITY

All data was generated using standard methods and reported with known data quality, type of analysis, units, etc.

DATA USABILITY

All IDW data was determined to be usable to support disposal decisions for the project.

DATA QUALIFIER CHANGES

There were not data qualifiers applied or changed as a result of the data validation performed on this data set.

QA objectives for measuring data are expressed in terms of precision, accuracy, representativeness, comparability, completeness, and sensitivity (PARCCS). The QA objectives provide a mechanism for ongoing control and evaluating and measuring data quality throughout the project.

A review of the collected data is necessary in order to identify if data measurement objectives established in the seven-step data quality objective (DQO) process have been met. In general, the following data measurement objectives were considered:

•Specification of particular analytical method and reporting detection limit requirements
•Identification of the appropriate laboratory analytical QC requirements
•Verify if appropriate levels of other PARCCS criteria for the data has been met
•Delineation of specific sample-handling issues or other project-specific issues

The data validation review of the QA objectives verifies if the collected data are of sufficient quality to support their intended use.

A total of 0 results (0.00 %) out of the 858 results (sample and field QC samples) reported have had qualifiers modified during this Data Usability Assessment and 0 results (0.00 %) have been rejected or deemed a serious deficiency. 0 results were qualified during the data review process. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count.

Review Objective/Sampling Design				
Is the Final UFP QAPP associated with the event present in the Planning folder of the FUDSChem library for the project?	•			
Were key outputs defined during systematic planning (e.g.,PQOs or DQOs and MPCs) reviewed to make sure they are still applicable? Refer to the UFP QAPP for the projects, and to the worksheets found in REPORTS | UFP QAPP Worksheets.	•			
Refer to summary reports found in REPORTS | Event Tracking Reports | Event Status: All Data Types, Event Status: Chemistry Detail, and Unplanned Samples to review planned and unplanned samples and test methods.	•			
Was the sampling design reviewed for consistency with stated objectives? Refer to MAPS | Export to Google Earth to review sampling locations.	•			Soil vapor plume around SV-1 has not yet been fully delineated (additional round of step outs needed), and benzene plume on western edge of project site has also not been fully delineated.
Were data quality indicators (DQIs) from the DoD QSM used for this event? Review and discuss any DQIs that deviated from the DoD QSM. Refer to the UFP QAPP and to REPORTS | Environmental Setup Reports | Analyte Criteria, which highlights items that were modified from the original templates based on the DoD QSM.	•			The criteria for all QC elements matches the final UFP QAPP.
Review Data				
If Event Planning was performed in FUDSChem, were all samples and measurements identified in REPORTS | Event Tracking Reports | Event Status: All Data Types completed and approved (all checked cells are green)?	•			
If Event Planning was performed in FUDSChem, were all samples identified in REPORTS | Event Tracking Reports | Event Status: Chemistry Detail collected and approved (all checked cells are green), or notated to explain discrepancies?	•			Note: SV-11 and SV-12 were not able to be sampled during this event (flooded). SV-21 is not able to be sampled and is recommended for abandonment.
If Event Planning was performed in FUDSChem, were all samples identified in REPORTS | Event Tracking Reports | Unplanned Samples reviewed to ensure correct completeness calculations?			•	Not applicable. No unplanned samples were collected.
Were deviations from planned activities (e.g., number and locations of samples, holding time exceedances, damaged samples, non-compliant PT sample results, and SOP deviations) reviewed to determine their impacts on the data usability? If Event Planning was performed in FUDSChem, refer to REPORTS | Data Usability Assessment Reports | Project Completeness.	•			Analytical completeness is 100%. Sampling completeness is complete except for exceptions noted for SV-11, -12, and -21.
Have all Location related placeholders, such as centroid coordinates, been resolved? Review REPORTS | Data Assessment Reports | Location Discrepancy - Review.	•			
Were laboratory and data review reports for each Sample Delivery Group (SDG) associated with the event present in the FUDSChem library for the project? Refer to the list of SDGs listed on the cover page of the Data Usability Assessment Summary Report found under REPORTS | Data Usability Assessment Reports.	•			

Data Usability Summary

Review Questions	Yes	No	NA	Comment
Review Data				
Were all data review reports reviewed? Look for patterns, trends, and anomalies (e.g., unexpected results). Refer to the Data Review Reports in the project library as well as the event summary reports located in REPORTS | Data Usability Assessment Reports.	•			
Were all data review reports associated with an approved eQAPP? Review the footer of the Data Review report in the Library to identify the version of the eQAPP that was used.	•			
Were there any implications of unacceptable QC sample results and does this impact sample results? If so, did any qualifiers require revision using the Sample Qualification tab of this interface?		•		There were no qualifiers applied during validation.
Were sensitivity requirements met, as compared to regulatory Project Action or Screening Limits? Review REPORTS | Data Usability Assessment Reports | Sensitivity Summary.		•		As noted in the data validation report, the following analytes in one or more sample did not meet sensitivity requirements: Benzene and Vinyl Chloride.
Were any sample results recommended for rejection during validation (X qualified)? If so, have all X qualifiers been revised to R or J using the Sample Qualification tab of this interface?		•		No data were qualified "X".
Were all LTM related parameters required for the project, such as groundwater measurements, environmental parameters, and well screen intervals found to be complete and correctly reported?	•			
Have all sections of the Dashboard linked Project Tracking Report been documented as complete?	•			
Document Usability/Draw Conclusions				
Based on the previous 'Review Data' documentation, are there any limitations on the use of the data associated with this event?		•		
Describe the conclusions reached during this Data Usability Assessment.	•			All data is usable as qualified.
Lessons Learned/Recommendations				
Were any Program level Lessons Learned identified? (e.g., SW8330 was not the best fit for this site and MS/MS should be considered)		•		
Were any Project level Lessons Learned identified? (e.g., ISM sampling resulted in anomalies to be resolved in the future, or current locations not comparable to historical data)		•		
Are there any additional items associated with this sampling event that need clarification?		•		
Were any Sample level Lessons Learned identified? (e.g., a particular well may be expected to be dry in the future)	•			SV-21 is not sample-able and should be abandoned. SV-11 and SV-12 could not be sampled as they were flooded – frequently happens in these probes. SV-20, -21, -22, -27, -29, and -31 are difficult to obtain a full sample from. MW-58 may run dry.

Appendix K – Investigation Derived Waste

WASTE TRACKING LOG
Former Titan 1-A Missile Facility, Lincoln, CA
