1 This form is for use only in recording approved JDs involving dry land. It extracts the relevant elements of the longer approved JD form in use since 2007 for aquatic areas and adds no new fields.
B. REQUIRED ADDITIONAL COMMENTS TO SUPPORT JD. EXPLAIN RATIONALE FOR DETERMINATION THAT THE REVIEW AREA ONLY INCLUDES DRY LAND: The entire 694-acre site consists of dry land located between the Beaver Lake Mountains and the mostly dry Beaver River Bottoms. The mountains only contain ephemeral drainages that disappear once they reach the flatter valley below. None of these drainages are located in the study area. Focus was given to features that were most likely to exhibit waters of the U.S. indicators and photographs were provided to demonstrate the lack of OHWM within the study area. No indications of wetlands or other open water features were identified on site.
