**Subject: USACE 2026 Nationwide Permit Reissuance  
Section 401 Water Quality Certification No. DWQ-2025-06001**

Dear Ms. Fisher,

The Division of Water Quality (DWQ) has had the opportunity to public notice the Draft Section 401 Water Quality Certification for the proposal to reissue and modify Nationwide Permit (Project) for Waters of the United States (WOTUS) in the State of Utah, from October 6, 2025, to November 5, 2025. The DWQ did not receive any comments.

Enclosed you will find a Section 401 Water Quality Certification, along with accompanying conditions authorized by the DWQ's Director. This Certification applies to projects covered under the reissued and modified 2026 Nationwide Permits issued by the U.S. Army Corps of Engineers (USACE). These permits authorize categories of activities under the Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act, provided they have no more than minimal individual and cumulative adverse environmental impacts. Once the project receives authorization under the 2026 Nationwide Permit, it may proceed in accordance with the terms and conditions specified in the Certification.

If you have any questions about the attached Certification, please contact Linsey Shafer at (385) 405-4158 or at [lrshafer@utah.gov](mailto:lrshafer@utah.gov).

Sincerely,

Linsey Shafer  
General Permit Section

**Project Proponents:** U. S Army Corps of Engineers  
Michael Jewell, Chief Regulatory Division  
Sacramento District  
1325 J Street  
Sacramento, CA 95814

**Project:** On June 18, 2025, the U.S Army Corps of Engineers issued 90 FR 26100 Proposal to Reissue and Modify Nationwide Permits (NWP). The USACE is proposing to reissue 56 of the existing 2021 NWPs, along with associated general conditions and definitions, with minor changes. Additionally, the USACE is proposing to issue one new NWP. The proposed new NWP A (Fish and Aquatic Organism Passage) would authorize activities to improve the fish passage and other aquatic organisms through aquatic ecosystems. NWPs are general permits issued by the U.S. Army Corps of Engineers (USACE) to authorize categories of activities under Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act of 1899 that have no more than minimal individual and cumulative adverse environmental effects. NWP streamline the authorization process for those minor activities

**Location:** State of Utah

## I. Definitions

- A. **Blue Ribbon Fishery:** status administered by the Utah Division of Wildlife Resources and the Blue Ribbon Advisory Council that indicates the waterbody has high quality in the following attributes: fishing, outdoor experience, fish habitat, and economic benefits.
- B. **Beneficial Use Classes** are how waters of the state are grouped and classified to protect against controllable pollution the beneficial uses designated within each class. UAC R317-2-6.
- C. **Category 1 Waters** are *“Waters which have been determined by the Board to be of exceptional recreational or ecological significance or have been determined to be a State or National resource requiring protection, shall be maintained at existing high quality through designation, by the Board after public hearing, as Category 1 Waters.”* UAC R317-2-3.2
- D. **Category 2 Waters** *“are designated surface water segments which are treated as Category 1 Waters except that a point source discharge may be permitted provided that the discharge does not degrade existing water quality.”* UAC R317-2-3.3
- E. **Designated Beneficial Uses** means a water’s present most reasonable uses, grouped by use classes to protect the uses against controllable pollution. Beneficial uses designated within each class are described in Utah Administrative Code (UAC) R317-2-6 and waterbodies beneficial uses can be found in UAC R317-2-13. For the purposes of this document, the term “designated beneficial uses” will be used to describe all uses required to be protected by Utah water quality standards and antidegradation policy.
- F. **Director Notification** means submittal of the U.S. Army Corps of Engineers (USACE) application and any supplemental attachments to the Utah Department of Environmental Quality (DEQ), Director of the Utah Division of Water Quality (DWQ) for review.
- G. **Existing Uses** *“means those uses actually attained in a water body on or after November 28, 1975, whether or not they are included in the water quality standards.”* UAC R317-1-1. *“If a situation is found where there is an existing use which is a higher use (i.e., more stringent protection requirements) than that current designated use, the Director will apply the water quality standards and anti-degradation policy to protect the existing use.”* UAC R317-2-3.
- H. **Level I Antidegradation Review (ADR):** *“is conducted to insure that existing uses will be maintained and protected.”* UAC R317-2-3.5
- I. **Level II Antidegradation Review (ADR)** is conducted to insure that water quality degradation is necessary and that the proposed activity is documented to be both economically and socially important. Level II ADRs are required for any activity that’s impacts are not considered temporary and limited and is likely to result in degradation of water quality.
- J. **Project Proponent** *“means the applicant for license or permit or entity seeking certification.”* 40 CFR §121.1.
- K. **Total Maximum Daily Load (TMDL)** *“means the maximum amount of a particular pollutant that a waterbody can receive and still meet state water quality standards, and an allocation of that amount to the pollutant’s sources.”* UAC R317-1-1

- L. **Waters of the United States (WOTUS)** means waterbodies subject to the provisions of the Clean Water Act.
- M. **303(d) list** is a state’s list of impaired and threatened waters, including but not limited to; streams, lakes, and reservoirs adopted to implement the Clean Water Act Section 303(d).

## II. Acronyms

AU – Assessment Unit  
BMPs – Best Management Practices

WOTUS – Waters of the United States

## III. Executive Summary

Pursuant to Section 401 of the CWA 33 U.S.C. Section 1251 et seq., the DWQ grants Water Quality Certification (Certification) to all USACE Nationwide Permits (NWPs) in Utah proposed by 90 FR 26100 except those that involve dam maintenance/rehabilitation or reservoir dewatering. Certification is subject to the conditions outlined in this document and adherence to the Sacramento Districts Regional Conditions, and adherence to any conditions outlined in the proposed NWPs. The conditions outlined in this Certification are necessary to assure compliance with effluent limitations, monitoring requirements, and/or other applicable laws and regulations adopted for state primacy of the CWA.

DWQ’s conditions are based on and are necessary to comply with applicable state rules. Specifically, the following Utah rules represent overarching considerations that require the conditions outlined by this document to apply to the USACE Section 404 NWPs: Utah’s rules promulgating standards of quality for waters of the State affirm “*it shall be unlawful and a violation of these rules for any person to discharge or place any wastes or other substances in such manner as may interfere with designated uses protected by assigned classes or to cause any of the applicable standards to be violated*” UAC R317-2-7.1.a. Additionally, “*all actions to control waste discharges under these rules shall be modified as necessary to protect downstream designated uses*” UAC R317-2-8. As stated in UAC

R317-15-6.1 the Director will ordinarily consider whether the proposed discharge “*impairs the designated beneficial use classifications (e.g., aquatic life, drinking water, recreation) in Section R317-2-6*” UAC R317-15-6.1.A.1., “*exceeds water quality criteria, either narrative or numeric, in Section R317-2-7*” UAC R317-15-6.1A.2. or “*fails to meet the antidegradation (ADR) requirements of Section R317-2-7*” UAC R317-15-6.1.A.3.

On May 2, 2025, Leah Fisher the USACE Regional Permit Specialist, requested a pre-filing meeting with DWQ for the Proposal to Reissue and Modify Nationwide Permits (NWP). DWQ attended a pre-filing meeting with Leah Fisher on May 30, 2025, for the proposed 2026 reissuing of NWPs. DWQ received a complete 401 Certification request on June 18, 2025, for the proposal to reissue and modify NWP. The USACE determined the reasonable period of time (RPOT) for DWQ to act on the certification request is six months. The certification will be considered waived if DWQ does not act on the request by December 15, 2025.

#### **IV. Background**

Nationwide Permits (NWPs) are issued by the U.S. Army Corps of Engineers (USACE) to authorize categories of activities under Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act of 1899 that have no more than minimal individual and cumulative adverse environmental effects. The USACE is proposing to reissue the existing NWPs, with minor modifications, along with some adjustments to the associated general conditions and definitions. The Proposal to Reissue and Modify Nationwide Permits (NWP) was published in the Federal Register on June 18, 2025, (90 FR 26100). NWPs were first issued by the USACE in 1977 (42 FR 37122) to authorize categories of activities that have minimal adverse effects on the aquatic environment and streamline the authorization process for those minor activities. Many of the NWP require the permittee to submit a pre-construction notification to the district engineer before commencing the activity.

All of the NWPs issued or reissued in 2021 are currently scheduled to expire on March 14, 2026. The USACE is proposing to reissue 56 of the 57 current 2021 NWPs, as well as one new NWP. The USACE will not reissue NWP 56, which authorizes structures in marine and estuarine waters, including federal waters, for finfish mariculture activities. The proposed new NWP A (Fish and Aquatic Organism Passage) will authorize activities to improve the fish passage and other aquatic organisms through aquatic ecosystems. Most of the NWPs will be reissued without changes; however, the USACE plans to modify two of the 2021 NWPs: NWP 48, which covers commercial shellfish mariculture activities, and NWP 56, which covers finfish mariculture activities. These modifications are a response to litigation concerning these two permits.

Additionally, the USACE is proposing to modify a few NWPs to simplify and clarify those NWPs. The proposed modifications to the general conditions and definitions are intended to reduce burdens on the regulated public and continue to comply with the statutory requirement that NWP authorize only activities with no more than minimal individual and cumulative adverse environmental effects. The USACE is also proposing regional conditions for the 2026 NWP, specific to the State of Utah, designed to ensure that the proposed NWP would result in no more than minimal, individual, and cumulative adverse environmental effects.

#### **V. Certification Conditions**

- A. The Project Proponent shall provide Director Notification prior to commencing construction for the following projects:

1. Any project proposed under Nationwide Permits 3 (Maintenance), 37 (Emergency Watershed Protection and Rehabilitation), and any project proposed under NWP 27 (Aquatic Habitat Restoration, Enhancement, and Establishment Activities) where a USACE Pre-Construction Notification (PCN) is required;
  2. Any proposed project that will be within 500 feet of the existing water's edge of the Great Salt Lake, Utah Lake or Bear Lake;
  3. Any project with a potential to discharge to an impaired waterbody with an approved Total Maximum Daily Load (TMDL), where the project has the potential to discharge a pollutant identified/addressed by the TMDL;
  4. Any project with a potential to discharge to *Category 1* or *Category 2 waters*;
- B. All activities with a potential discharge to WOTUS must implement and maintain BMPs to fully protect the waterbodies assigned beneficial use(s).
- C. Hazardous and otherwise deleterious materials (e.g. oil, gasoline, chemicals, trash, sawdust, etc.) shall not be stored, disposed of, or accumulated or conveyed through adjacent to or in immediate vicinity WOTUS unless adequate measures and controls are provided to ensure those materials would not enter WOTUS in the State of Utah. **Any spill or discharge of oil or other substance which may cause pollution to WOTUS in the State of Utah, including wetlands, must be immediately reported to the Utah DEQ Hotline at (801) 536-4123, a 24-hour phone number.**
- D. All activities shall not cause further degradation of impaired waterbodies, as defined in DWQ's most recent 303(d) list, regardless of whether a TMDL has been completed. The Project Proponent must review impairments on the waterbodies where the Project has the potential to discharge and is responsible for ensuring that water quality standards are not exceeded and designated beneficial uses are not impaired.
- E. All activities conducted in WOTUS in the State of Utah shall be conducted in the "dry" to the maximum extent practicable, by diverting flow utilizing cofferdams, berms constructed of sandbags, clean rock (containing no fine sediment) or other non-erodible, non-toxic material. All diversion materials shall be removed at the completion of the work. The Project Proponent shall consider conducting instream work during low flow conditions and work shall not be conducted during spawning season. Additionally, construction machinery shall not be operated within WOTUS in the State of Utah unless it is unavoidable, in which case it shall be conducted in the "dry" as stated above. The work shall be conducted in a manner to minimize the duration of the disturbance, turbidity increases, substrate disturbance, and minimize the removal of riparian vegetation. Construction machinery shall be clean to prevent the transfer of aquatic invasive species.
- F. Project Proponents conducting activities in or immediately adjacent to WOTUS in the State of Utah with assigned beneficial use class 1C (domestic drinking water), that are upstream 2 miles or less from any intake supply, must notify the water supply operator and the local health department prior to commencement of work. If the water supply operator or the local health department recommends additional BMPs or monitoring, the Project Proponent must consider those recommendations in their Project design.

- G. All activities conducted in or immediately adjacent to WOTUS in the State of Utah with assigned beneficial use class 3A (cold water fishery) or has blue ribbon fishery designation must avoid removal of native riparian vegetation that provides stream shading to the maximum extent practicable. Any Projects that approve removal of riparian vegetation that provides shade must require reestablishment of native vegetation that provides equal or greater shade. The Project Proponent shall provide successful reestablishment of native vegetation.
- H. Construction activities that disturb either greater than one acre of land, or less than one acre of land and is part of a larger common plan of development that would disturb greater than one acre, are required to obtain coverage under the Utah Pollutant Discharge Elimination System (UPDES) Storm Water General Permit for Construction Activities (Permit No. UTRC00000<sup>[1]</sup>). The permit requires the development of a Storm Water Pollution Prevention Plan (SWPPP) to be implemented and updated from the commencement of any soil disturbing activities at the site, until final stabilization of the project. The SWPPP should include, but not be limited to, final site maps and legible plans, location of storm water outfalls/discharges, and information pertaining to any storm water retention requirements.
- I. Dewatering activities, if necessary during construction, may require coverage under the UPDES General Permit for Construction Dewatering (Permit No. UTG070000<sup>[2]</sup>) applies to the construction dewatering of uncontaminated groundwater or surface water sources due to construction activities; hydrostatic testing of pipelines or other fluids vessels; water used in disinfection of drinking water vessels; and other similar discharges in the State of Utah that have no discharge of process wastewater. The permit requires submission of a Notice of Intent (NOI); maintenance of a discharge log; development and implementation of a dewatering control plan; and monitoring for Flow, Oil & Grease, pH, Total Suspended Solids (TSS), and Chlorine (required when chlorinated water is used and discharged to a stream with a chlorine standard). Discharge Monitoring Reports (DMRs) are required to be submitted monthly, regardless of whether a site discharges in a particular month.

## VI. Condition Justification and Citation

- A. Director Notification is a condition for projects identified in Part V (1) above which present an increased likelihood of jeopardizing designated beneficial uses or otherwise causing a violation of WQS, promulgated pursuant to Utah Code Sections 19-5-104, 19-5-110 and Section 303 of the Clean Water Act. Director Notification is necessary to provide the DWQ with notice and information of projects that are issued a NWP that have a potential to result in a discharge which could threaten designated beneficial uses or cause a WQS violation. The Director Notification of specifically identified projects this is applicable to.
  - 1) Projects proposed under NWP 3, 27 and 37 require Director Notification because they often involve removing built up sediment and debris or the release of sediment and as a result have the potential to result in discharges which threaten designated beneficial uses or may cause violation(s) of WQS for turbidity. Without proper precautions, projects under NWPs 3, 27 and 37 could result in significant increases in turbidity in the waterbody proposed for discharge. Numeric water quality criteria for turbidity in certain use designations could be violated if the project proponent does not take proper steps

---

<sup>1</sup> <https://deq.utah.gov/water-quality/general-construction-storm-water-updes-permits#general-permit>

<sup>2</sup> <https://deq.utah.gov/water-quality/general-construction-storm-water-updes-permits#construction-dewatering-hydrostatic-testing>

to minimize the increases. WQS for turbidity will be violated if there is an increase of 10 Nephelometric Turbidity Units (NTU) in waterbodies with designated beneficial uses related to recreation and if there is an increase of 10 NTUs (3A & 3B) or 15 NTUs (3C & 3D) in waterbodies with aquatic wildlife designated beneficial uses. UAC R317-2-14.1 and UAC R317-2-14.2.

Citations: UAC R317-2-14.1, UAC R317-2-14.2., UAC R317-2-7.1.a., UAC R317-2-8. , UAC R317-15-6.1, UAC R317-15-6.1.A.1., UAC R317-15-6.1.A.2., UAC R317-15-6.1.A.3.

- 2) Projects within 500 feet of the Great Salt Lake, Utah Lake and Bear Lake are conditioned on Director Notification. The DWQ has determined that the Great Salt Lake, Utah Lake and Bear Lake are unique waterbodies that require special attention and are at a greater risk when projects are within 500 feet of their existing water's edge. Both Utah Lake and Bear lake have recreation designated use 2A (frequent primary contact recreation) and aquatic wildlife designated uses associated with either 3A cold water species of game fish (Bear Lake) or 3B warm water species of game fish. Both types of designated uses could be impacted by turbidity increases. Water quality criteria for turbidity will be violated if there is an increase of 10 NTUs in waterbodies with designated uses related to recreation and if there is an increase of 10 NTUs in aquatic wildlife designated use classes 3A and 3B. UAC R317-2-14.1 and UAC R317-2-14.2. Significant turbidity spikes or sediment deposits could cause a waterbody not to meet all its designated beneficial uses or if large quantities of sediment are transported downstream, it could impact the downstream beneficial uses. Utah's rules promulgating standards of quality for waters of the State affirm "it shall be unlawful and a violation of these rules for any person to discharge or place any wastes or other substances in such manner as may interfere with designated uses protected by assigned classes or to cause any of the applicable standards to be violated" UAC R317-2-7.1.a.

Citation(s): UAC R317-2-14.1, UAC R317-2-14.2., UAC R317-2-7.1.a., UAC R317-15-6.1, UAC R317-15-6.1.A.1., UAC R317-15-6.1.A.2., UAC R317-15-6.1.A.3.

- 3) Projects with potential discharge to an impaired waterbody with an approved Total Maximum Daily Load (TMDL), where the project has the potential to discharge a pollutant identified/ addressed by the TMDL are conditioned on Director Notification. A total maximum daily load or TMDL "means the maximum amount of a particular pollutant that a waterbody can receive and still meet WQS, and an allocation of that amount to the pollutant's sources." UAC R317-1-1. When a waterbody is impaired and listed on the 303(d) list, states are required to create and implement TMDLs for the specific waterbody to restore water quality. Waters on Utah's most up to date 303(d) list are not currently meeting their designated beneficial uses. According to Utah's Final 2024 Integrated Report<sup>3</sup> the waters identified as impaired are not meeting their designated beneficial uses because "the concentration of the pollutant- or several pollutants- exceeds numeric water quality criteria, or quantitative biological assessments indicate that the biological designated uses are not supported (Narrative water quality standards are violated)." TMDLs are created to limit discharges to the waterbody with the goal of meeting designated beneficial uses. If project proponents do not adhere to the BMPs and pollutant reduction requirements identified in approved TMDLs (as applicable) then there may be a violation of WQS and designated beneficial uses could be further impacted. If the potential discharge contains pollutants/ parameters that are included in an approved TMDL, the project proponent must take extra precautions, as identified in the TMDL, to minimize and prevent discharges that could further degrade the waterbodies, and prevent the

---

<sup>3</sup> <https://deq.utah.gov/water-quality/utahs-integrated-report>

waterbodies from meeting its designated beneficial and existing uses. Director notification of projects with the potential to discharge to impaired water bodies with approved TMDLs will ensure consistency with TMDL requirements and goals.

Citation(s): UAC R317-1, UAC R317-2-7.1.a., UAC R317-15-6.1, UAC R317-15-6.1.A.1., UAC R317-15-6.1.A.2., UAC R317-15-6.1.A.3.

- 4) Projects with potential discharges to Category 1 and Category 2 waters are conditioned on Director Notification in order to ensure that the Utah DWQ's Antidegradation Policies are being implemented effectively. Category 1 waters are "waters which have been determined by the Board to be of exceptional recreational or ecological significance or have been determined to be a State or National resource requiring protection, shall be maintained at existing high quality through designation, by the Board after public hearing, as Category 1 Waters." UAC R317-2-3.2. Category 2 waters "are designated surface water segments which are treated as Category 1 Waters except that a point source discharge may be permitted provided that the discharge does not degrade existing water quality." UAC R317-2-3.3. Discharges may be allowed in Category 1 and Category 2 waters "where pollution will be temporary and limited after consideration of the factors in UAC R317-2-3.5.b.4., and where best management practices will be employed to minimize pollution effects." UAC R317-2-3.2 and UAC R317-2-3.3.

Although NWP's are typically issued for projects with minimal impacts to water quality, the NWP's do not take into consideration the quality of the water affected. In order to comply with the Antidegradation Policy outlined by UAC R317-2-3.5.b.4, requiring that pollution to Category 1 and Category 2 waters be temporary and limited, the DWQ must review all projects with the potential to discharge to those waters. Without the ability to review the individual projects proposing to discharge to Category 1 and Category 2 waters, the DWQ cannot assure that they will meet the antidegradation policy or other applicable water quality requirements. As stated in UAC R317-15-6.1 the Director will ordinarily consider whether the proposed discharge "impairs the designated beneficial use classifications (e.g., aquatic life, drinking water, recreation) in Section R317-2-6" UAC R317-15-6.1.A.1., "exceeds water quality criteria, either narrative or numeric, in Section R317-2-7" UAC R317-15-6.1.A.2. or "fails to meet the antidegradation (ADR) requirements of Section R317-2-7" UAC R317-15-6.1.A.3 when making a certification decision.

Citation(s): UAC R317-2-3.2., UAC R317-2-3.3. , UAC R317-15-6.1, UAC R317-15-6.1.A.1., UAC R317-15-6.1.A.2., UAC R317-15-6.1.A.3.

- B. Implementation of BMPs. Project approval is conditioned on implementation of BMPs, which are required to be implemented by the antidegradation policy in UAC R317-2-3. Water quality standards could be violated unless appropriate BMPs are incorporated to minimize the erosion-sediment and nutrient load. Violations of water quality standards could cause a waterbody to fail to meet its designated beneficial uses. As required by Utah's antidegradation policy UAC R317-2-3.1 "*Existing instream water uses shall be maintained and protected. No water quality degradation is allowable which would interfere with or become injurious to existing instream water uses.*" As stated in UAC R317-15-6.1 the Director will ordinarily consider whether the proposed discharge "*impairs the designated beneficial use classifications (e.g., aquatic life, drinking water, recreation) in Section R317-2-6*" UAC R317-15-6.1.A.1., "*exceeds water quality criteria, either narrative or numeric, in Section R317-2-7*" UAC R317-15-6.1.A.2. or "*fails to meet the antidegradation (ADR) requirements of Section R317-2-7*" UAC R317-15-6.1.A.3 when making a

Certification decision. If appropriate BMPs are incorporated, there is assurance that the Project will not violate water quality standards or impair a waterbody's beneficial use.

Citation(s): UAC R317-2-3.1, UAC R317-15-6.1, UAC R317-15-6.1.A.1., UAC R317-15-6.1.A.2., UAC R317-15-6.1.A.3.

- C. Proper Storage of Hazardous and Otherwise Deleterious Materials. Project approval is conditioned on proper storage of hazardous and otherwise deleterious materials, and notification of any discharge of those materials, to assure that water quality and narrative standards are not violated. When projects are occurring in or around waterbodies, there is a chance for pollutants to inadvertently be spilled/discharged into waterbodies due to increased risk from project related activities (e.g. presence of machinery, onsite chemical and gas storage, improper waste storage, and failure to use proper BMPs). To prevent or reduce the possibility that hazardous and otherwise deleterious materials are inadvertently discharged into a waterbody, Project Proponents must not store, dispose of, or accumulated such materials adjacent to or in immediate vicinity of WOTUS unless adequate measures and controls are provided to ensure those materials would not enter waters of the State. If there is a discharge to WOTUS in the State of Utah, it must be immediately reported to the DEQ, as stated in Utah Code Section 19-5-114. An inadvertent discharge of pollutants can cause violations with Utah's Narrative Standards, which states "*It shall be unlawful, and a violation of these rules, for any person to discharge or place any waste or other substance in such a way as will be or may become offensive such as unnatural deposits, floating debris, oil, scum or other nuisances such as color, odor or taste; or cause conditions which produce undesirable aquatic life or which produce objectionable tastes in edible aquatic organisms; or result in concentrations or combinations of substances which produce undesirable physiological responses in desirable resident fish, or other desirable aquatic life, or undesirable human health effects, as determined by bioassay or other tests performed in accordance with standard procedures; or determined by biological assessments in Subsection R317-2-7.3*" UAC R317-3-7.2. Utah's rules promulgating standards of quality for waters of the State affirm "*it shall be unlawful and a violation of these rules for any person to discharge or place any wastes or other substances in such manner as may interfere with designated uses protected by assigned classes or to cause any of the applicable standards to be violated*" UAC R317-2-7.1.a. Discharges of pollutants, even inadvertently, could cause both a violation of applicable water quality standards and possibly interfere with a waterbodies designated uses.

Citation(s): Utah Code § 19-5-114, UAC R317-3-7.2, UAC R317-2-7.1.A, UAC R317-15-6.1., UAC R317-15-6.1.A.1., UAC R317-15-6.1.A.2.

- D. Protection of Impaired Waterbodies. Waters that are impaired and conjunctively on Utah's most up to date 303(d) list are not currently meeting their designated beneficial uses. According to Utah's Final 2024 Integrated Report <sup>4</sup> the waters identified as impaired are not meeting their designated beneficial uses because "the concentration of the pollutant- or several pollutants- exceeds numeric water quality criteria, or quantitative biological assessments indicate that the biological designated uses are not supported (Narrative water quality standards are violated)." Utah's antidegradation policy states "existing instream water uses shall be maintained and protected. No water quality degradation is allowable which would interfere with or become injurious to existing instream water uses." UAC R317-2-3.1. In order to ensure that proposed Project meets Utah's antidegradation policy and that discharges do not further degrade water quality the Project Proponent needs to be aware of the waterbodies assessment, more specifically if the

<sup>4</sup> <https://deq.utah.gov/water-quality/2024-integrated-report>

waterbody is impaired and listed on Utah's most current 303(d) list. If the potential discharge contains pollutants/parameters that the waterbody is listed as impaired for, the Project Proponent needs to take extra precautions to minimize and prevent discharges that could further degrade the waterbodies and prevent the waterbodies from meeting its beneficial and existing uses. Typical pollutants associated with USACE Section 404 permits (e.g. sediment), especially when a waterbody proposed for discharge is impaired, could cause applicable water quality standards to be violated, if appropriate measures are taken. As stated in UAC R317-15-6.1 the Director will ordinarily consider whether the proposed discharge "impairs the designated beneficial use classifications (e.g., aquatic life, drinking water, recreation) in Section R317-2-6" UAC R317-15-6.1.A.1., "exceeds water quality criteria, either narrative or numeric, in Section R317-2-7" UAC R317-15-6.1A.2. or "fails to meet the antidegradation (ADR) requirements of Section R317-2-7" UAC R317-15-6.1.A.3. when making a Certification decision.

- E. Dry Conditions to the Maximum Extent Practicable. Project approval is conditioned on conducting activities under dry conditions to the maximum extent practicable to assure that water quality standards are not exceeded. Construction machinery used within a waterbody can cause significant impacts to water quality if adequate precautions are not taken. When it is unavoidable to operate construction machinery within the waterbody the Project Proponent should focus on minimizing the duration of the disturbance, turbidity increase, substrate disturbance, removal of riparian vegetation, and work shall be conducted in the "dry" to the maximum extent practicable. Minimizing the duration of impact reduces the chance that the impacts will accumulate and cause significant impacts to water quality. Minimizing turbidity increases is important because the State of Utah has numeric water quality criteria for turbidity in certain use designations, which could be violated if the Project Proponent does not take proper steps to minimize the increases. Water quality criteria for turbidity will be violated if there is an increase of 10 NTUs in waterbodies with designated uses related to recreation and if there is an increase of 10 NTUs (class 3A and 3B) or 15 NTUs (class 3C and 3D) in waterbodies with aquatic wildlife designated uses. UAC R317-2-14.1 and UAC R317-2-14.2. Conducting work in the "dry" to the maximum extent practicable will help reduce the risk of the numeric criteria for turbidity to be exceeded, as well as reduce the risk of a significant sediment load being transported downstream. Discharges of sediment can not only violate numeric criteria, but also, risk violating Utah's narrative standard *"It shall be unlawful, and a violation of these rules, for any person to discharge or place any waste or other substance in such a way as will be or may become offensive such as unnatural deposits, floating debris, oil, scum or other nuisances such as color, odor or taste; or cause conditions which produce undesirable aquatic life or which produce objectionable tastes in edible aquatic organisms; or result in concentrations or combinations of substances which produce undesirable physiological responses in desirable resident fish, or other desirable aquatic life, or undesirable human health effects, as determined by bioassay or other tests performed in accordance with standard procedures; or determined by biological assessments in Subsection R317-2-7.3."* UAC R317-2-7.2. Violations of numeric and narrative criteria could cause a waterbody not to meet its designated beneficial use and a transport of sediment downstream could prevent a downstream waterbody from meeting its designated beneficial uses. As required by Utah's antidegradation policy UAC R317-2-3.1 *"Existing instream water uses shall be maintained and protected. No water quality degradation is allowable which would interfere with or become injurious to existing instream water uses"*. Additionally, *"All actions to control waste discharges under these rules shall be modified as necessary to protect downstream designated uses"* UAC R317-2-8. As stated in UAC R317-15-6.1 the Director will ordinarily consider whether the proposed discharge *"impairs the designated beneficial use classifications (e.g., aquatic life, drinking water, recreation) in Section R317-2-6"* UAC R317-15-6.1.A.1., *"exceeds water quality criteria, either narrative or numeric, in Section R317-2-7"* UAC R317-15-6.1A.2. or *"fails to meet the*

*antidegradation (ADR) requirements of Section R317-2-7*” UAC R317-15-6.1.A.3 when making a certification decision.

- F. Notification to water supply operators and local health departments is a condition of Project approval for all projects in or immediately adjacent to WOTUS with assigned class 1C for domestic drinking water upstream two miles or less from any intake supply. As stated in Utah’s antidegradation policy UAC R317-2-3.5.d “depending upon the locations of the discharge and its proximity to downstream drinking water diversions, additional treatment or more stringent effluent limits or additional monitoring, beyond that which may otherwise be required to meet minimum technology standards or in stream WQS [water quality standards], may be required by the Director in order to adequately protect public health and the environment. The additional treatment/effluent limits/monitoring which may be required will be determined by the Director after consultation with the Division of Drinking Water and the downstream drinking water users.” UAC R317-2-3.5.d. These additional requirements are necessary to ensure that beneficial use class 1C is maintained in the waterbody proposed for discharge or in some cases, protection of the downstream waterbodies designated beneficial use, when classified as 1C.

- G. Vegetation Preservation and Reestablishment in Fisheries. Project approval is conditioned on avoiding native riparian vegetation removal that provides stream shading to the maximum extent practicable in or immediately adjacent to WOTUS used as fisheries in order to maintain existing beneficial use. Waterbodies with beneficial use class 3A (cold water fishery) or waterbodies with a blue ribbon fishery designation rely heavily on the available stream cover/shade to maintain designated beneficial uses. Riparian vegetation supplies necessary shade to stabilize water temperatures in streams. Removal of riparian vegetation, without reestablishment, could cause a waterbody not to maintain beneficial use 3A or its blue ribbon fishery designation. Utah’s antidegradation policy states “*existing instream water uses shall be maintained and protected. No water quality degradation is allowable which would interfere with or become injurious to existing instream water uses.*” UAC R317-2-3.1. Failure to minimize riparian vegetation removal and failure to reestablish riparian vegetation which results in the failure to maintain beneficial use class 3A would be considered a violation of Utah’s rules promulgating standards of quality for waters of the State, more specifically Utah’s antidegradation policy found at UAC R317-2-3. Additionally, the loss of riparian vegetation could cause a violation of the instream numeric criteria for temperature, which is listed as 20°C with a maximum temperature change of 2°C for beneficial use class 3A. UAC R317-2-14.2. If the temperature of the waterbody increases, there is a potential for instream water quality criteria for dissolved oxygen to be violated. Temperature and dissolved oxygen have an inverse relationship, where temperature increases then dissolved oxygen decreases, so an increase in temperature could cause a decrease in dissolved oxygen, and possibly a violation of the instream criteria for dissolved oxygen. The instream criteria for dissolved oxygen for beneficial use class 3A is a minimum of 8.0 milligrams per liter (mg/L) when early life stages are present and 4.0 mg/L when all other life stages are present. UAC R317-2-14.2. As stated in UAC R317-15-6.1 the Director will ordinarily consider whether the proposed discharge “*impairs the designated beneficial use classifications (e.g., aquatic life, drinking water, recreation) in Section R317-2-6*” UAC R317-15-6.1.A.1., “*exceeds water quality criteria, either narrative or numeric, in Section R317-2-7*” UAC R317-15-6.1A.2. or “*fails to meet the antidegradation (ADR) requirements of Section R317-2-7*” UAC R317-15-6.1.A.3 when making a certification decision.

- H. UPDES Storm Water General Permit for Construction Activities (Permit No. UTRC00000). UAC R317-8-2.5, gives the Director authority to issue general permits to cover specific categories of discharges, including storm water and construction dewatering that is discharged to a surface water. According to UAC R317-8-3.9 (6)(d), construction activities that result in a land disturbance of equal to or greater than one acre, including clearing, grading, and excavation are “industrial activities” under UAC R317-8-3.9(1)(a) and are therefore required to obtain and comply with a UPDES Permit for storm water discharges. This only applies to projects that meet or exceed one acre of disturbance.

Citation(s): UAC R317-8-3.9(6)(d) and UAC R317-8-3.9(1)(a)

- I. UPDES General Permit for Construction Dewatering (Permit No. UTG070000). UAC R317-8-2.5, gives the Director authority to issue general permits to cover specific categories of discharges, including storm water and construction dewatering that is discharged to a surface water. Under the authority granted by UAC R317-8-2.5, the Director issued the General Permit for Construction Dewatering and Hydrostatic Testing, UPDES Permit No. UTG070000 renewed and effective as of February 1, 2020. UPDES Permit No. UTG070000 applies to construction dewatering of uncontaminated groundwater or surface water sources due to construction activities, hydrostatic testing of pipelines or other fluids vessels, water used in disinfection of drinking water vessels and other similar discharges in the State of Utah that have no discharge of process wastewater. This only applies to projects that require dewatering and discharge to surface water.

## VII. Denials

**NWPs for Projects that involve dam maintenance/rehabilitation or reservoir dewatering are denied and must apply for individual certification from the Director** because they have the potential to discharge massive amounts of sediment if not properly regulated and administered. As stated in justification VI.A., the DWQ has concerns with projects that have potential to discharge large quantities of sediment into waterbodies. Projects such as dam maintenance/rehabilitation or reservoir dewatering that involve potential release of large quantities of sediment, either as part of project activities or inadvertently, have potential for catastrophic impacts to water quality. For example, in August 2016, the Tibble Fork Dam had an unplanned release of approximately 8,700 cubic yards of sediment from the Tibble Fork Reservoir into the North Fork of the American Fork River, causing a fish kill of about 5,250 fish. Samples taken revealed sediment concentrations of heavy metals (arsenic, cadmium, lead, and Zinc) in excess of EPA Region 3 Freshwater Sediment Screening Values for aquatic life and human health-based concentration for lead. The project had been permitted under a USACE Section 404 NWP, but the DWQ was unaware of the project. If the DWQ had the opportunity to review the project prior to USACE NWP issuance, impacts may have been prevented or at least minimized by adding project-specific conditions or additional oversight to the project. To avoid future violations and catastrophic releases, the DWQ is requiring Individual Section 401 Certifications for these types of projects.

**VIII. Disclaimers**

- A. The Project Proponent must acquire all necessary easements, access authorizations and permits to ensure they are able to implement the Project. This Section 401 Certification does not convey any property rights or exclusive privileges, nor does it authorize access or injury to private property.
- B. This Section 401 Certification does not preclude the Project Proponent’s responsibility of complying with all applicable Federal, State or local laws, regulations or ordinances, including water quality standards. Permit coverage does not release the project proponent from any liability or penalty, should violations to the permit terms and conditions or Federal or State Laws occur.
- C. A Project within a Municipal Separate Storm Sewer System (MS4) jurisdiction, must comply with all the conditions required in that UPDES MS4 Permit and associated ordinances. No condition of this Section 401 Certification shall reduce or minimize any requirements provided in the MS4 Permit. In the case of conflicting requirements, the most stringent criteria shall apply.

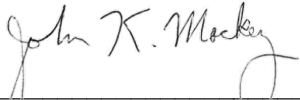

**IX. Public Notice and Comments**

As Stated in UAC R317-15-5., this Certification decision is subject to a 30 public notice period. Per UAC R317-15-5 draft certification decisions are subject to a thirty (30) day public notice. After considering public comments, the Director may execute the Certification issuance, revise it, or abandon it.

- A. Public Notice Dates: October 6, 2025 till November 5, 2025.
- B. Public Notice Comments/Response: None received.
- C. During finalization of the Certification certain dates, spelling edits, and minor language or formatting corrections may have been completed. Due to the nature of these changes they were not considered major and the Certification will not be Public Noticed again.

**X. Water Quality Certification**

The Utah DWQ certifies that if the Project Proponent adheres to the conditions outlined in this Certification and adheres to any USACE Section 404 NWP's Conditions, then the Project will comply with water quality requirements and applicable provisions of the CWA sections 301 (Effluent Limitations), 302 (Water Quality Related Effluent Limitations), 303 (Water Quality Standards and Implementation Plans), 306 (National Standards of Performance), and 307 (Toxic and Pretreatment Effluent Standards).
